INDEX

A

Able-bodied anthropomorphic clearance and reach requirements, 159
Accumulation conveyors, 680–682
Accumulation line serving two workstations, 676–677
Activity network diagrams, 66–68
Activity relationship chart, 300
Activity relationships, 113–119
  qualitative flow measurement, 117–119
  quantitative flow measurement, 114–117
Actual distance, facility location problems and, 520
Adaptability, facility, 5
Adjacency-based objectives, layout algorithms and, 305
Adjacency graphs, 311–313
Adjustable angle conveyor sorter, 230
Advance shipping notice (ASN), 396
Aesthetics, plot plans and, 811
Affinity diagrams, 64
AGV towing vehicle, 243
Airborne particulate matter buildup, 482
Aircraft repair and refurbishment facility design, 698–699
Aisle space, 342–344
  impact on storage utilization, 423–424
  specifications, 124–126
Algorithmic layout approaches. See Layout algorithms
Algorithms, forming manufacturing cells and, 101–102
Alternative block layouts, 302
Alternative ranking, facilities plan evaluation and, 749–757
Americans with Disabilities Act (ADA), 12, 137, 157–160, 211–212
Analysis chart for receiving and shipping, 400
Andons, 109
Annealing, simulated, 344–351
Annealing schedules, 345
Annual worth (AW), 784
Apple's plant layout procedure, 296–297
Apron depth of docks, 403
Assembly charts, 41, 43
Assembly department layout, 820
Assembly plant layout, 821
Atmospheric systems, 481–489
  clean rooms, 486
  HVAC design, 486–489
  work environment maintenance and, 481–485
Audits. See Facilities planning audit
Automated data collection and communication equipment, 280–291
  automatic, paperless communication, 287–291
  automatic identification and recognition, 281–286
Automated electrified monorails (AEM), 241–244, 246
Automated guided vehicles (AGV), 240–241, 669–671
Automated industrial vehicles, 239–244
  automated electrified monorails, 241–244, 246
automated guided vehicles, 240–241
  fork truck AGV, 241
  sorting transfer vehicles, 244, 266
Automated storage and retrieval machines, 263–266
Automated storage and retrieval systems (AS/RS), 608–627
  buffers and stockers and, 613
  building cost calculations and, 618
  building dimensions and, 616–617
  cost justification and, 612
  design of, 611
  expected throughput of, 622–627
  machine cost calculation and, 617–618
  machine cycle times and, 619–622
  machine utilization calculation and, 622
  problems and, 613–614
  process and, 608–610
  rack cost calculation and, 617
  rack-supported, 608–609
  sizing and cost estimation, 614–618
  as stand alone structures, 608
  types of, 610
  typical configuration of, 610
Automatic, paperless communication, 287–291
  light and computer aids, 288–291
  radiofrequency data terminals, 287
  voice headsets, 287–288
Automatic dispensers, 279–280
Automatic identification and recognition, 281–286
  bar coding, 281–286
  machine vision, 287
  magnetic strips, 287
  optical character recognition, 285–286
  radio frequency identification (RFID) tags, 286
Automation principle, material handling and, 181
Automation systems, building, 508–509

B

Backtracking, flow paths and, 96–97
“Ballpark” estimates, 769
Band heuristics, 630–631
  optimum rack shape and, 632–634
  pick point sequence and, 630–631
  S/R machine travel time and, 631–632
Bar coding, 281–286
  bar code printers, 285
  bar code readers, 283–285
  bar codes, 281–282
  contact readers, 283
  digital photography technology and, 285
  fixed-beam readers, 284
  moving-beam scanners, 284–285
  noncontact readers, 283–285
  omnidirectional scanners, 285
Barrier-free compliance, 157–160
able-bodied anthropomorphic clearance and reach requirements, 159
material handling and, 212
wheelchair dimensions and turning radius, 158
Barrier-free facilities, 12
Barrier performance, 479–480
Batching picking orders, 434–438
Belt conveyors, 220–222
flat belt conveyor, 220–221
horsepower requirements for, 654–656
magnetic belt conveyor, 220–222
telelescoping belt conveyor, 220–221
Benchmarking, product design and, 33
Biased sampling technique (BST), 349
Bill of materials, 39
Bin shelving, 267–268
Block layouts, 292
Block stacking, 252, 580–595
basic model, 581–587
continuous approximation of, 587, 595
determining optimum storage depth, 583–587
multiple row depths and, 587–592
profile, 582
safety stock and, 592–594
BLOCPPLAN, 322–326
Blurred boundaries, 6
Bombardier sorter, 234
Branch-and-bound approach, 662
Break areas, 156
Break even analysis, 790–792
Bridge cranes, 248–249
Bucket brigade, 438
Buffer or staging areas, 405–406
Bulk belt conveyors, 657–660
Bumper pads, 413
Business as usual, 4

C
Cafeterias, 152–153
Cantilever rack, 259
Carousels, 274–277
horizontal carousel, 275–276
independent rotating rack, 277
vertical carousel, 276
Cart-on-track conveyor, 226–228
Carton flow rack, 269–270
Carton size, 196
Cash flow estimates, 766–775, 792
Ceiling cavity ratio, 491, 494
Cellular manufacturing system design, 100–109
Central equipment rooms, 482
Chain conveyors, 223, 225
Changing room layout, 146
Chebyshev distance, 520
Checklists for material handling, 181
Chemical pollutants, 482
CHEP, 203
Chinese algorithm, 562–566
Chinese labor costs, 12
Chute conveyors, 219–220
Clean rooms, 486
Closeness relationship values, 117
Coefficient of utilization, lighting, 493, 495
Column spacing, 474
Column types, 477
Combination layouts, 110
Commercial facility layout packages, 354–355
Communication improvement, just-in-time manufacturing and, 463–464
Community considerations, investment and, 12
Component part drawings, 35
Computer-aided design (CAD), 35–36, 827–831
Computer-aided process planning (CAPP), 40
Computerized Relative Allocation of Facilities Technique (CRAFT), 314–322
Computerized three-dimensional models, 831
Concurrent engineering, 36
Conference and meeting rooms, 165, 167–168
Congestion. See also Waiting line models in-process inspection station analysis, 692–694
shrink wrap machine analysis, 689–691
Consolidation, facilities, 6
Construction-to-type layout algorithms, 307
Contact bar code readers, 283
Container and pallet pooling, 202–203
Container nesting ratio, 190
Container/pallet flow in different systems, 203
Container space utilization, 190
Container spacing, conveyor horsepower calculations and, 654–655
Container weight, 655–656
Containers and unitizing equipment containers, 215–216
pallet containers, 217–218
palletizers, 217–218
pallets, 216
skids and skid boxes, 216
stretch wrap, 217–218
tote pans, 216–217
unitizers, 216–217
Contingency diagrams, 66
Continuous improvement facilities planning cycle, 7
Continuous location problem, 519
Continuous representation, layout algorithms and, 306
Contour lines, 523–527
Conventional between-department flow structure, 94
Conventional storage models, 580–607
block stacking, 580–595
deep lane storage, 596–602
pallet racks and, 602–607
Converting method, cost estimates and, 768–769
Conveyor horsepower calculations, 653–660
angle of incline and, 655
belt conveyors, 654–656
bulk belt conveyors, 657–660
container spacing and, 654–655
conveyor speed and, 656–657, 659–660
determining maximum container weight and, 655–656
powered unit and package conveyors and, 653–657
roller conveyors and, 656–657
two conveyor segments vs. one long conveyor, 657
Conveyor loops
with deterministic loading and unloading sequences, 645–650
minimum required speed and, 652–653
INDEX

Muth’s model with one loading and one unloading station, 645–648
with Poisson arrivals, 650–653
three stations and, 648–650
two stations and, 648
Conveyor sortation devices, 227–234
adjustable angle conveyor sorter, 230
bombardier sorter, 234
cross-belt sorter, 233
deflector, 227–229
pop-up belts and chains, 250, 253
pop-up rollers, 230, 233
pop-up skewed wheels, 230–231
push diverter, 228–229
rake puller, 230
sliding shoe conveyor, 230–231
tilt tray sorter, 230, 233
Conveyors, 219–234
belt conveyors, 220–222
cart-on-track conveyor, 226–228
chain conveyor, 223, 225
crane conveyor, 219–220
power-and-free conveyor, 226–227
roller conveyor, 222–223
slat conveyor, 223–224
speed and horsepower calculations, 656–657, 659–660
towline conveyor, 224–225
trolley conveyor, 226
using waiting line analysis and, 680–682
wheel conveyor, 223–224
Cooling load, 487–488, 489
Coordinated descent procedure, 537–538
Cost of capital, 776
Costs. See also Economic comparisons
automated storage and retrieval systems and, 614–618
design changes during project, 18–20
material handling and, 209–210
office facility planning and, 166
supply chain excellence and, 5
Counterbalanced lift trucks, 238–239, 259, 396
Covering problems, 551–560
partial cover problem, 553–560
total cover problem, 551–553
Cranes, 244, 247–251
bridge crane, 248–249
gantry crane, 248, 250
jib crane, 247, 249
stacker crane, 248, 251
tower crane, 251
Critical path method (CPM) graphs, 66
Cross-belt sorter, 233
Cross-docking, 388, 391, 396
Crushable items, 429–430
Cube utilization, pallets and, 193
Customer satisfaction, 4–5, 386
Cut-trees, 333–337
Cyclical network, 560

D
Debt capital, 777
Dedicated storage layout, 574–577
Deep lane storage, 596–602
basic model, 598–600
continuous approximation for, 600–601
push-back storage rack and, 599
safety stock and, 601–602
shuttles used for, 597
Deflector, 227–229
Delivery truck fleet analysis, 686–687
Department flows
flows between departments, 93–97
flows within departments, 89–93
line flow patterns, 92
loop between-department flow structure, 94
loop flow pattern, 92
process department, 90–91
product department, 89–90
segmented between-department flow structure, 94–95
spine between-department flow structure, 94
spine flow pattern, 92
tandem between-department flow structure, 94–95
tree flow pattern, 92
Department layout algorithms, 306–307
Department main aisles, 342–344
Department space requirements, 123–124
Deportmental planning, 97–113
department examples, 98–100
layout types based on material flow system, 110–113
product family departments, 100–109
volume-variety layout classification, 98
Design. See Facilities design
Design for requirement, 474–476
Design process representation, 746–747
Detailed layouts, 292
Dial indexing machine, 452
Digital photography technology, bar codes and, 285
