Simulink®, 211–14, 335–9
  digital modulation in, 214
Simulink® (continued)
random signal generation in, 211–14
random data sources, 211–12
random noise generators, 212–13
sequence generators, 213–14
system performance simulation in, 214–20
Simulink®, nonlinear systems simulation in, 276–306
distortion and system metrics, measurements, 297–302
adjacent-channel distortion, 297
distortion ratio, 300
distortion ratio
error vector magnitude, 300–301
in-band distortion, 297–300
Signal-to-Noise (SNR) ratio, 300
noise figure in nonlinear systems, simulation of, 304–5
noise-to-power ratio, simulation of, 302–4
nonlinear amplifier mathematical models in, 283–9
“amplifier” block–RF blockset, 286–9
cubic polynomial model, 283
Ghorbani model, 283
hyperbolic tangent model, 283
“memoryless nonlinearity”
block-communications blockset, 283
Rapp model, 283
Saleh model, 283
nonlinear amplifier physical models in, 289–97
data source, 291–3
“general amplifier” block, 290–296
noise data, 294
nonlinearity data, 293–4
operating conditions, 294–5
“s-parameter amplifier” model, 296–7
visualization, 294
RF impairments in, 280–283
communications blockset, 280
mathematical models, 281–2
physical models, 281–2
RF blockset, 280
Single-bandpass signal, 108
Single-frequency Volterra models, 63–5, 95, 99–100
filter-nonlinearity, 63
nonlinearity-filter model, 64
Single tone signal, 107
and bandpass signal, 109–10
Sinusoid, nonlinear systems response to, 128–9
Smooth-limiter amplifier model, 73–4
SNDR, see Signal-to-Noise and Distortion Ratio (SNDR)
SNR, see Signal-to-Noise Ratio (SNR)
Soft-limiter model, 73, 121
S-Parameter Amplifier model, 296
Spread spectrum modulation, 41–5
IS-95 CDMA system, signal model of, 44–5
signal before and after spreading, 42
time-domain representation, 43
WCDMA Systems, 45
SS, see Subscriber Stations (SS)
SSS, see Strict Sense Stationarity (SSS)
Stochastic inputs, linear systems with, 114–16
Gaussian processes, 116
white noise, 115–16
Strict Sense Stationarity (SSS), 323
Strictly memoryless system, 71
Subscriber Stations (SS), 53
Superheterodyne receiver architecture, 28
Synchronization Channel (SCH), 50
System analysis, basics of, 307–9
linear systems, 309
memoryless systems, 309
systems with memory, 309
time-invariant systems, 309
System metrics estimation from simulated spectra, 256–63
ACPR, 262–3
