anatomy and, 170, 170f, 171f, 172
complications, 177–178
distribution of local anesthesia, 173
equipment, 173–174
indications, 173
local anesthetics used, 173
overview, 169–173
technique, 174–176, 174f–177f
interpleural regional anesthesia, 178–186
  complications, 184–186
  distribution of local anesthesia and analgesia,
    182–183
  equipment, 183
  indications, 181–182
  local anesthetics used, 182
  overview, 178–181
  technique, 183–184, 184f
overview, 167–168
regional nerve anatomy, 168–169, 169f
thoracic paravertebral blockade, 186–191, 187f
  equipment, 189
  overview, 186–189
  technique, 189, 191
transverse abdominis (TAP) block, 191–195
  equipment, 194
  ultrasound-guided technique, 194–195
  use in animals, 193–195, 194f
  use in people, 191, 192f, 193
Tuohy needles, 44, 47, 48–49, 48f, 52f
Ulnar nerve, 151f, 153f, 157, 159, 160f, 161
Ultrasound
  artifacts, 80–81
    acoustic shadowing, 81, 81f
    anisotropy, 80–81
    contact, 80
  combined ultrasonography/electrolocation-
    guided blocks
    brachial plexus block, 155–157
    femoral nerve block, 212–215, 213f, 214f
    psoas compartment (lumbar plexus) block,
      205–206, 206f
    sciatic nerve block, 219–221, 219f–221f
  echogenic needles and, 51, 52f
  equipment selection, 82
  guided peripheral nerve blockade, 82–85, 83f, 84f
    electrolocation combined with, 85–86
    “in-plane” technique needle positioning, 83, 83f
    nerve stimulator-guided compared, 85
  nerve visualization, 82–83
    “out-of-plane” technique needle positioning,
      83, 84f
  visualization of local anesthetic
    administration, 84–85, 84f
  guided techniques, 7
    thoracic paravertebral blockade, 189, 191
    transverse abdominis (TAP) block, 194–195
history of, 7
physics and technology, 77–79
  Doppler effect, 79, 79f
  resolution, 78–79
  schematic of basic machine, 78f
  resolution, 78–79
  compound imaging, 78, 82
  contrast, 78
  detail, 78
  spectrum imaging, 78
  temporal, 79
  settings/controls, 79–80, 79f, 80f
    depth, 79–80
    focus and zoom, 80
    frequency, 79
    gain, 80
    persistence or temporal averaging, 79
    power, 80
    time gain compensation, 80, 80f
  tissue appearance, 81–82
    blood vessels, 81
    bone, 81
    facial tissue, 81
    fat, 81
    muscles, 81
    pleura and air, 82
Urine retention, 33
Vasoconstrictors, as local anesthetic
  adjuvant, 31–32
Vertebrae, 227
Vertebral canal, 227–228, 230
Von Anrep, Vasili Konstantinovich, 4
Wavelength, 77
“Wet tap,” 230
Whitacre spinal needles, 47
Wood, Alexander, 4
Wound healing, local anesthetic effect
  on, 36–37, 100–102
Wound soaker catheters, 57, 58f, 59, 59f, 60f, 93–100
  choice of local anesthetics, 97
  clinical tips for use, 99
  complications of use, 99–100
  described, 97–98, 98f
  distribution of local anesthetics, 96–97, 96f
  equipment required for placement of, 98
  human studies, 93–94
  placement technique, 98–99, 98f
  veterinary studies, 94–96
Wound soaker catheters (cont’d)
  amputation, 96, 96f
  feline oncologic surgery, 95f, 96
  total ear canal ablation-bulla osteotomy
    in dogs, 94–96, 94f

Xylazine, for epidural analgesia, 247t

Zygomatic and lacrimal nerve
  block, 110
Zygomatic branch of facial nerve, 106
Zygomatic nerve, 105–106, 105f
Zygomaticofacial nerve, 106, 106f
Zygomaticotemporal nerve,
  106, 106f
