INDEX

A
Abstract classes, 431
Acceptance tests, 386, 387
Access control requirements, 251, 257
Access speed: optimization of, 364–369
Acknowledgment messages, 291
Acquisition strategy(-ies), 221–234
alternative matrix of, 231–233
applying concepts of, 233–234
and business need, 228–229
custom development, 223
and in-house experience, 229
outsourcing, 225–228
packaged software, 224–225
and project management, 230
and project skills, 230
selecting, 230–233
and time frame, 230
Actions, interface, 279, 280, 289
Action–object order, 287
Activity-based costing, 110, 113
Activity elimination, 112
Actors:
in sequence diagrams, 452–453
in use cases, 125, 127, 440
Adjusted project complexity (APC) factor, 74–76
Adoption:
enabling, 415–417
motivating, 412–415
Aesthetics (interface design), 267, 270
Afferent processes, 322–323
Aggregated information, 352, 354
Aggregation, 447–448
Agile development, 45–48
Alternative courses (use cases), 128
Alpha testing, 352, 357
Alternative matrix (acquisition strategies), 231–233
Amazon, 32, 245, 251
AMR Research Inc., 36
Analysis, basic process of, 83
Analysis models, 9
Analysis phase (SDLC), 9–10, 83–85
purpose of, 219
transitioning to design from, 219–221
Analysis strategy, 9
APC (adjusted project complexity) factor, 74–76
APIs (application program interfaces), 245
Applications:
familiarity with, 19
general functions of, 347
Application logic, 238, 239, 240, 257
Application program interfaces (APIs), 245
Application service providers (ASPs), 225–226
Application systems, 354–355
Approval committee, 9, 10, 13–14, 18, 23, 25, 47–48
Arcs (PERT charts), 78
Architectural components, 238–239
Architecture centric systems analysis and design, 433–434
Architecture design, 10, 238–258
applying concepts of, 260–261
architectural components in, 238–239
client–server architectures, 239–240
client–server tiers, 240–241
and cloud computing, 244–245
comparing options for, 245–246
creating, 246–247
cultural and political requirements in, 254–256, 303
defined, 237
hardware and software specification in, 258–259
nonfunctional requirements in, 246, 256–257
operational requirements in, 246–247, 256
performance requirements in, 247–249, 256
security requirements in, 249–254, 256–257
server-based architectures, 242
and virtualization, 224–225
Architectural relationships, 440–441
Architectural engineering tools, 433–434
Architectural styles, 225–226
Architectural viewpoints, 225–226
Architecture

B
Backups, 422
Balancing (in data flow diagrams), 160
Bar code readers, 292
Batch processing, 292
Batch reports, 296–297
BCW-Trim, 255
Behavior, 429
Behavioral state machine diagrams, 438, 455–458
creating, 457–458
elements of, 456–457
Behavior diagrams, 435
Benchmarking:
defined, 110
informal, 110–111, 113, 114
Benefits:assigning values to, 23–24
change management assessment of, 409–410
identifying, 22–23
BEP (break-even point), 20–21
Beta software, 422
Beta testing, 386, 387
Bias, 298, 299
Black-box unit testing, 386, 387
Black hole errors, 175–176
Boehm, Barry W., 44, 57, 61, 77
Bonhams 1793 Ltd., 224
Booch, Grady, 433
Bottom-up interviews, 94–95
BPA (Business Process Automation), 11
BPI (Business Process Improvement), 12
BPM (Business Process Management), 11–12
BPR (Business Process Reengineering), 12, 415–416
Breadth of information, 107
Break-even point (BEP), 20–21
British Airways, 49
Bugs, 381, 405, 419–420, 421
Bundle, 154
Business analyst, 6, 7, 11
Business contingency plan, 401, 406–408
Business contingency planning, 406
Business intelligence (BI), 352
Business need, 3, 9, 11–16, 228–229
Business Process Automation (BPA), 11
Business processes, 158–162
Business Process Improvement (BPI), 12
Business Process Management (BPM), 11–12
Business Process Reengineering (BPR), 12, 415–416
Business requirements, 13–15, 17, 18, 85
defined, 85
in systems request, 86
Business rules:
communicating, 189, 205
defined, 189
Business scenarios, 121
Business value, 5–6, 9, 13–14, 16
Buttons, 266, 272, 280–282, 287

C
CA (certificate authority), 253
Calendar picker control, 294
Capacity requirements, 248, 257
Cardinality (ERDs), 192–193, 198
Carlson Hospitality, 25
CASE repository, 59, 347
CASE tools, see Computer-aided software engineering tools
Cash flow analysis, 19–20
Cash-flow method, 24, 26
CBT (computer-based training), 417
Central processes, 322–323
Certificate authority (CA), 253
Champion, 27
Change:
compelling reason for, 412
resistance to, 409–410
Change agent, 409, 413, 415
Change control, 380
Change management, 410–417
assessing costs and benefits, 411–412
motivating adoption, 412–415
revising management policies, 410–411
Champion, 27
Change control, 380
Change management, 410–417
assessing costs and benefits, 411–412
motivating adoption, 412–415
revising management policies, 410–411
Change management (Cont.)
  training, 415–417
  understanding resistance to change, 409–410
Change management analyst, 6–7
Check requests, 419–421
Check boxes, 295
Check digit check, 296, 297
Chen, Peter, 188, 190
Chicago, Illinois, 229
Chief information officers (CIOs), 36, 39
Child entity (ERDs), 192–193, 198–199
Children (DFDs), 160, 174
Christie’s International PLC, 224
Children (DFDs), 160, 174
Child entity (ERDs), 192–193, 198–199
Chief information officers (CIOs), 46, 49
Class(es):
  in class diagrams, 444–448
  in object-oriented approach, 428
Class diagrams, 444–451
  creating, 449–451
  elements of, 444–448
  simplifying, 448
Classroom training, 416, 417
Client computers, 239
Client–server architectures, 239–240
  nonfunctional requirements for, 256–257
  strengths and weaknesses of, 241
Client–server tiers, 240–241
Closed-ended questions, 92–95, 100
Cloud computing, 244–245
Clustering, 367–368
COCOMO model, 77
Code control, 382
Cohesion (modules), 329–332
Coincidental cohesion, 330, 332
Color, for user interfaces, 267, 270, 273, 280
Combo boxes, 295
Common coupling, 333
Communication, complexity of, 55
Communicational cohesion, 332
Compatibility, systems, 18–19
Completeness check, 296, 297
Complexity, system, 40, 48
Complex systems, 48
Computer-aided software engineering (CASE) tools, 43, 58–59
  for balancing DFDs and ERDs, 206–208
  for drawing data models, 206–208
  for indexing and clustering, 369
  for process modeling, 157, 160, 162–163, 173
Computer-based training (CBT), 417
Computer crime, 250
Concatenated identifiers (ERDs), 191
Concrete classes, 430, 431
Concurrent multilingual system, 255
Conditions (sequence diagrams), 453
Conditional line (structure charts), 320, 321, 325
Confirmation messages, 290, 291
Conflict, handling, 57, 99
Conflict avoidance strategies, 58
Connector (structure charts), 320, 321
Consistency (interface design), 267, 272, 280
Consistency check, 296, 297
Construction, system, 10, 378
Constructor operations (class diagrams), 446
Construx Estimate, 50
Content awareness (interface design), 267, 269
Content coupling, 330
Context diagrams (DFD):
  creating, 164
  defined, 158–159
Context-sensitive help, 291
Controls (security), 249
Control couple (structure charts), 321, 322, 328
Control coupling, 333
Control module, 320, 321–325
Conversion locations, 403–404, 405
Conversion modules, 404–405
Conversion strategy, 402–406
Conversion style, 403, 405
Coordination (project activities), 58–60
Cost(s):
  assigning values to, 23–24, 110
  change management assessment of, 411–412
  of conversion strategies, 406
  identifying, 22–23
  of requirements determination, 108
Costar, 50
Cost–benefit analysis, 19, 22–25. See also
Economic feasibility
Cost estimates, margin of error in, 61–62
Couples, 320–322, 328–329, 337
Coupling, 330, 333
Critical path, 78
Critical path method (CPM), 78
Critical success factors, 36
Critical tasks, 78
Critical thinking skills, 83
CRM (customer relationship management), 226
CRUD matrix, 207–208, 359
Cultural and political requirements, 87–88, 90, 254–256, 257
Custom development, 223, 228–230
Customer relationship management (CRM), 226
Customization requirements, 254–255, 257
D
Data:
  backing up, 422
  converting to new system, 408
Data access logic, 238–239, 243
Data bases, 350–354
  defined, 350
  legacy, 350
  multidimensional, 352–353
  NoSQL, 353–354
  object, 352
  relational, 350–352
Database and file specifications, 10
Database check, 296, 297
Database management system (DBMS), 406, 407
Data capture, 292
Data couple (structure charts), 320, 321
Data coupling, 330
Data dictionary, 59, 193–196
Data files, 347
Data flow(s), 157–158
  alternative, 162
  defined, 157–158
Data flow diagrams (DFDs), 154–177
  balancing ERDs with, 206–208
  context diagrams, 164
  creating, 162–177
  defining business processes with, 158–162
  DFD fragments, 165–166
  elements of, 156–158
  focus of, 154
  identifying levels of, 323–325
  ISDs vs., 277
  Level 0, 159–160
Level 1 and below, 160–161
logical, 312
physical, 312–315
  processes on, 322–324
  reading, 154–156
  validating, 173–177
Data flow testing, 386, 387
Data integrity, 364
Data marts, 352
Data model, 187
Data modeling, 188–208
  applying concepts for, 200–203
  creating entity relationship diagrams, 196–198
  data dictionary and metadata, 193–196
  elements of entity relationship diagrams, 189–193
  reading entity relationship diagrams, 188–189
  user’s role in, 203
  validating entity relationship diagrams, 203–208
Data storage, 238
  existing, 355
  optimization of, 362–369
  optimizing efficiency of, 363–364
Data storage design, 346–373
  applying concepts of, 356, 360–362, 371–373
  CRUD matrix, 359
  data storage formats, 347–356
  estimating storage size, 369–371
  moving from logical to physical data models, 357–358
  optimizing access speed, 364–369
  optimizing data storage, 362–371
  optimizing storage efficiency, 363–364
  physical entity relationship diagrams, 357–359
Data storage formats, 347–356
  apply concepts related to, 356
  databases, 350–354
  files, 347, 348–350
  selecting, 354–356
Data store, 157, 158
Data types, 354
Data warehousing, 352
DBMS (database management system), 347
Decision support systems (DSS), 277
Decision tables, 162
Decision trees, 162
Decomposition (of DFDs), 158–162
Density (layout), 270
Dependency, partial, 213
Dependency, transitive, 215
Dependent, 213
Dependent entity (ERDs), 199
Depth of information, 107
Derived attributes, 110
Design prototype, 44–45, 48
Design strategy, 10
Design time, 221
Design tools, switching, 221
Detail reports, 298, 300
Development costs, 18, 23–25
DFDs, see Data flow diagrams
DFD fragments, 165–166
Index I-3

Digital signatures, 252
Direct conversion, 403, 405, 406
Discounted cash flow, 21, 26
Discrete multilingual system, 255
Document analysis, 82, 89, 91, 94, 104–105, 107–108, 113

Documentation:
designing structure of, 389–391
identifying navigation terms, 392, 393
during planning phase, 59–60
system, 388
types of, 388–389
user, 388–389
writing topics, 391–392
Documentation development, 388–393
Documentation navigation controls, 389, 390, 396
Documentation testing, 387
Documentation topics, 389, 391–392
Dominion Virginia Power, 39
Drop-down menus, 289, 290
DSDM (dynamic systems development method), 46
Duration analysis, 110, 111, 113
Dynamic binding, 431, 432
Dynamic models, 451, 455
Dynamic systems development method (DSDM), 46
Dynamic view, 434, 451

E
Ease of learning, 267, 270, 272–273
Ease of use, 267, 270, 272–273
Economic feasibility, 19–25
assigning values to costs/benefits, 23–24
break-even point, 20–21
cash flow analysis and measures, 19–22
discounted cash flow, 21
identification of costs/benefits, 22–23
net present value, 22
return on investment, 20
Edit checks, 296
EDS, 229
Efficient processes, 322–323
Effort, 77
Effort required, estimating, 77
EIM (enterprise information management) systems, 206
EIIs (executive information systems), 354
E-JAD, 98, 99, 100
Elasticity, 245
Electronic JAD, 98, 99, 100
Electronic reports, 301
Embedded hyperlinks, 290
Emerging technology, 11, 13
Employees:
preparing for transition, 408–409
resistance to change by, 409–410
Encapsulation, 429, 430
Encryption, 252–253, 256
Encryption and authentication requirements, 252–253
End-user DBMSs, 348
Enterprise DBMSs, 347
Enterprise information management (EIM) systems, 206
Enterprise resource planning (ERP), 224
Entity (ERDs), 190–191
changing to tables or files, 357
dependent, 199
identifying, 197–198
independent, 199
intersection, 199–200
meta data for, 194
Entity relationship diagrams (ERDs), 40
executive information systems (EISs), 354
function point approach, 62, 73–77
of project time frame, 49–51
Ethics, 5
European Central Bank, 404, 419
Event(s):
in behavioral state machine diagrams, 457
defined, 335
in program specification, 335, 336
in use cases, 122, 123, 129, 130, 133
Event-driven modeling, 122
Event-driven programming, 318
Exceptions (use cases), 121, 125–126
Exception reports, 298
Execution occurrences (sequence diagrams), 452, 454
Executive information systems (EIIs), 354
Expert systems (ESs), 355
Extends relationships, 441
External entities, 157, 158
External triggers, 125
Extreme programming (XP), 46
E&Y (Ernst & Young), 318
Factoring, 330
Familiarity with technology, 18–19, 60
Familiarity with the application, 18–19
Fat clients, 239, 242
FBI, 250
Feasibility analysis, 9, 10, 14, 17, 18–28
defined, 18
economic feasibility, 19–25
organizational feasibility, 25–28
technical feasibility, 18–19
Feasibility study, 18, 28
Feature creep, 43, 222
Fields, 269
changing attributes to, 357
defined, 269
Field labels, 269
Files, 347, 348–350, 355
changing entities to, 357
defined, 347
File naming standards, 59
File specifications, 10
Final state, 457
First mover, 11
First normal form (1NF), 211–213
Fixed-price contracts, 227
Flags (control couples), 321, 322
Foreign keys, 350, 359
Forms, 266
aesthetics of, 270
content awareness in, 269
layout of, 267–269
Formal system (of organization), 104
Formal usability testing, 286
Format check, 296, 297
Fourth-generation/visual programming languages, 43
Freedman, Richard, 421
Frequently asked questions (FAQs), 418
Fully dressed use cases, 126–128
Functions (software systems), 238
Functional cohesion, 330, 332
Functionality, 16
Functional lead, 55
Functional requirements, 85–87, 90, 115
defined, 85
and use cases, 129–130, 134, 142–143
Functional view, 434, 439
Function point, 90
Function point approach (estimation), 73–77
effort required estimates, 77
system size estimates, 74–77
time required estimates, 77
