Saccharomyces bayanus
clarification and 95
classification 26–9
delimitation 30–5
Saccharomyces bayanus (continued)
- ethanol-resistant 29
- heat resistance 232
- karyotype analysis 37
- PCR profiles 39
- phenylethanol production by 76
- rarity on grapes 41

Saccharomyces cerevisiae 3
- amino acid permeases 72
- cell wall 6
- cinin 6
- chromosomes 14
- classification 26–9
- clonal diversity within 43, 46
- dominant strains 45, 46
- ecology 43–8
- glycolysis 55
- glycosylation 12
- on grapes 41
- heat resistance 231
- higher alcohols and 76
- identification of wine strains 35–40
- inoculation with 429, 462
- karyotype analysis 36–7
- killer factor in 19
- MET2 gene 30–5
- lactic acid bacteria, interactions with 175
- mtDNA analysis 35–6
- PCR profiles 38–40
- plasmic membrane 7
- reproduction 15
- temperature effects on 100
- winery colonization by 42

Saccharomyces spp.
- classification 26–9
- early name for 2
- in flor wines 476
- hybrids 32
- lactic acid bacteria, interactions with 175

Saccharomyces uvarum 26, 29, 31–2

Saccharomycodes spp. 24, 43

Salification 313

Sauternes 450–2

Sauvignon 399, 400, 451
- aroma, vegetal 282
- bunch stem necrosis in 283
- climate and 265
- gray rot in 402
- maceration 414, 417
- maturation 405
- noble rot 402
- shatter 243
- sugar concentration, maturity 404

use in must/wine treatment 193–221
practical consequences 206–9
winemaking, role in 211–6
advantages 211–2
disadvantages 211–2
yeast activation 213–4
yeast inhibition 213–4
winery, use in 216–21
wines, combination balance in 205–6
Sulfur treatments, vine 279
Sun-drying 301
Sunlight 256, 263, 282
Sunlight flavor 463
Supraextraction 417, 453
Survival factors 91–3
Svedberg values 121
Sweetening reserve 457
Symport 72–3
Syringaldazine 293, 403
Taille 459
Tanks
capacity 337
filling 334–9, 421
principle systems 335–6
hermetic 237, 336, 390
metal 238
open/closed 103, 104
self-emptying 339
shape 337
sterilization 233
sulfiting effects on 216
temperature control in 336, 351–2
thermic exchange capacity of 100

Tannins
antibacterial 167
concentration
in subtractive techniques 313
in wine, red 357–8
destemming and 332–3
Tannins (continued)
‘good’/‘bad’ 328, 357
in grape 246, 255, 334, 348–9
as inhibitors 98
oxidation of 358–60
proanthocyanidins 205
in rose wines 446–7
wood 434, 437

Tartaric acid 375
acidification with 307
bacterial metabolism of 151
Botrytis cinerea and 289, 291, 451
decidification and 308–10
evaporation and 311
in grape 245, 247, 251, 253, 256
varietal differences 277
insolubilization of 280
temperature effects on 265
water stress and 266

Taste
herbaceous 328, 354
light-induced 463
malolactic fermentation effects on 372
sorbic acid and 226
sulfiting effects on 215–6, 219

Temperature
abrupt changes in 102
active 264
alcoholic fermentation and 99–102, 431–2
ambient, effects on fermentation 339
automatic control of 81
bacterial membranes influenced by 120
lactic acid bacteria, effect on 166–7
maceration 350–2
malolactic fermentation and 375
maturation influenced by 263–6
monitoring tank 81
nitrogen assimilation and 88
in red winemaking 66, 81
stuck fermentations and 107, 339–45
yeast growth and 99–102

Tenturier 246
Terpenes 265, 402
Terpenic compounds 289, 318, 324
Terpenols 246, 257–9
Terroirs 280, 346, 357
Thermic exchange coefficient 100
Thermic shock 102
Thermoperiod 265
Thermoresistance 231–3
Thermovinification 66, 383–5
Thiamine 63, 90–1, 196, 201–2, 455
Thiamine phyrophosphate (TPP) 58, 189
Thiamine pyrophosphate (TPP) 57
Thinning, berry 282
Toasting 437
Tokay 281, 287, 458

Topping off 191
Topping, shoot 282
Torulaspora spp. 20, 28, 29
Torulopsis spp. 19, 24
Tourne disease 151, 174, 370
Trace elements 89
for lactic acid bacteria 162
metal, in grape pulp 246, 253
