identity solution based on, 1056–1057
new model for, 1061–1062
providers, 1057, 1068, 1070–1071
relying party, 1057–1058
rules, 1059, 1070–1072
claims-aware agent, AD FS role, 1060
Class A networks
identifying subnet characteristics using CIDR, 381
setting up subnets, 378–379
supernetting, 382
understanding network classes, 358–359
Class B networks
identifying subnet characteristics using CIDR, 381
setting up subnets, 376–378
supernetting, 382
understanding network classes, 359
Class C networks
calculating values for eight-subnet Class C network, 374–376
determining subnet numbers, 374
identifying subnet characteristics using CIDR, 380–381
subnet mask exercises, 369–370
subnetting, 372–373
supernetting, 382
understanding network classes, 359
Class D networks
multicast addresses, 497
understanding network classes, 360
Class E networks, 360
classes
configuring user class options, 495
DHCP, 471, 494
DNS record types and, 430
network, 356–360
setting up subnets, 372–379
classification, setting file classification, 629
Classless Inter-DomainRouting. See CIDR
(Classless Inter-Domain Routing)
client-side extensions (CSEs), group policies, 967
clients
DHCP, 494

clients, 428
DNS advantages in Windows Server 2016, 427–428
trust anchors, 428
DnsUpdateProxy, 429
docker
container requirements, 254
creating container images, 266–268
daemon, 253
features in Windows Server 2016, 3
installing, 256–258
managing container networking, 269–270
PowerShell commands, 258–259, 271–273
removing container images, 265–266
running container images, 264–265
selecting container images from repository, 270–271
start/stop policies, 260
starting Docker service, 260–261
tagging container images, 265
viewing running containers, 261–263
working with Hyper-V containers, 268
docker hub repository
adding images to container, 264–265
defined, 253
selecting images from, 270–271
dockerfile
commands, 267–268
creating new container images, 266–267
defined, 253
Document services role, 9
domain controllers
cloning, 910–911
configuring server topology, 907–908
controlling with AD Domain Services, 827
converting servers to, 798–799
creating additional, 924–925
demoting, 925–926
installing additional with IFM, 806–807
IPAM support, 518
multiple domains reducing replication traffic, 915
planning for placement of, 925–926
promoting, 799–803, 921–922
read-only, 425
replication between, 889, 892
using single tree, 918–919
Domain Controllers OU, Active Directory organization, 846
domain functional levels, 792–793
domain local groups, 837
Domain Name System Security Extensions. See DNSSEC (Domain Name System Security Extensions)
domain names, multiple domains for multiple, 916
domain namespace
configuring zone delegation, 417
delegating zones, 442–443
DNS, 405
Domain Naming Master, 927
domain operations masters, 927–928
Domain Services. See AD DS (Active Directory Domain Services)
domain trees and forests
adding additional domain controllers, 924–925
creating domain tree, 922
creating new subdomain, 922–923
joining new domain tree to forest, 924
overview of, 917
planning, 918
promotion process, 921–922
upgrading existing, 938
using forests, 920–921
using single tree, 918–919
domains. See also Active Directory Domains and Trusts
Active Directory Module for Windows PowerShell managing, 810
adding first Windows Server 2016 DC to existing, 797
clusters in single and multi-domain architectures, 220
DNS hierarchy, 407
drawbacks of multiple, 917
Failover Clustering and, 684
joining computer to Active Directory, 811–812
names, 406
planning structure for Active Directory installation, 795–796
potential relationships between sites and, 890
reasons for using multiple, 914–916
removing trusts between, 932
renaming, using forest functionality, 794
setting network access policies, 606
top-level, 405–406
troubleshooting VPNs, 577
Domains level, GPO processing, 968
DORA (Discover, Offer, Request, Acknowledge), in DHCP processes, 469
dotted-decimal notation, in IP addressing, 403
DR (disaster recovery), 188, 668, 924–925
drive encryption
with BitLocker. See BitLocker Drive Encryption

private keys, 1047
starter GPOs, 966
tested publishing domain, 1086–1087
tested user domain, 1086
expression-based audit policies, 657
Extended User Interface 64 bit (EUI-64), 390
Extensible Authentication Protocol. See EAP
(Extensible Authentication Protocol)
Extensible Firmware Interface (EFI), 91
external forwarding, DNS forwarding, 443
external trusts, 932

F
failback, 100, 696
failover
Hyper-V replica and, 712
MPIO (Multipath I/O), 100
process, 231
settings, 202–203
when it occurs, 696
failover architecture, DHCP
configuring, 505–506
hot standby, 501–502
load sharing, 501
overview of, 501
Failover Cluster Management MMC
adding cluster nodes, 229
clustering Print Services role, 230–231
creating clusters, 228–229
integration with Hyper-V Manager, 239
using dependency viewer, 232
validating cluster configuration, 226–227
Failover Clustering
achieving high availability with, 216–218
cluster quorums, 220–223, 685
clustered application settings, 695–697
clustering application settings, 231–232
clustering roles, services, and applications, 229–231, 693–695
connecting storage servers, 242
connecting Storage Spaces Direct servers, 706
creating clusters, 228–229, 692–693
DFSR, 893
dynamic quorum management, 687
features in Windows Server 2016, 4
high availability and, 191
high availability options, 671
installing, 223–225, 688–689
overview of, 215–216, 680–682
PowerShell commands, 199–200,
239–241, 704–705
requirements, 218–219
requirements for, 682–684
resource properties, 233–235,
697–700
review Q&A, 248–249
site-aware, stretched, or geoclustering, 220, 684–685
summary and exam essentials, 247
upgrading NLB clusters, 198–199
Validate a Configuration Wizard, 689–692
validating cluster configuration,
225–228, 687
Windows Server 2016 features, 236–239,
700–704
witness configuration, 685–687
workgroup and multi-domain clusters,
219–220, 684
working with cluster nodes, 229, 693
FAT (file allocation table)
advantages of NTFS, 118–119
converting FAT partition to NTFS, 89
converting to NTFS, 788
EFS compared with, 635
formatting hard drives, 110–112
understanding file systems, 86–87
fault tolerance
advantages of Active Directory Integrated DNS, 418
benefits of Storage Spaces Direct, 243, 707
compared with high availability, 217
disadvantages of primary zones, 416
high availability compared with, 681
overview of, 889, 924
secondary zones and, 417
fax server role, 9
FDE (Full Disk Encryption), BitLocker features, 633
Features On Demand, 39–40, 661
federated identity management, forests, 795
Federated Trust, AD RMS trust policies, 1085
Federation Metadata fields, relying-party trust, 1067–1068
Federation Service Proxy, AD FS role service, 1060
Federation Services. See AD FS (Active Directory Federation Services)
Fibre Channel
Hyper-V features, 141–142, 739
iSCSI compared with, 102
overview of, 106
storage solutions, 658
fields, user template, 849–851
file allocation table. See FAT (file allocation table)
File and Print service
clustering roles, services, and applications, 694–695
Failover Clustering, 680
File and Storage Services role, 9
file extension mappings, software installation settings, 1008–1009
File Server Resource Manager. See FSRM (File Server Resource Manager)
file services

stub zones, DNS

configuring stub zone transfers using zone replication, 423
overview of, 419–420
when to use, 420

subdomains, 407, 918–919, 922–923

subnet masks

calculating number of subnets, 366–367
CIDR as shorthand version of, 379
how to use, 364–366
setting up Class A subnets, 378–379
setting up Class B subnets, 376–378
subnet mask examples, 369–371
use in an ISP, 378

subnets/subnetting

as Active Directory replication objects, 894–895
benefits of, 360–361
calculating number of subnets, 366–367
configuring routes, 585
creating, 897–898
determining quantities of subnets and hosts using CIDR, 382
determining subnet requirements, 361
easy method for subnetting, 368
identifying subnet characteristics using CIDR, 380–381
implementing subnets, 362–364
IPAM support, 518
IPv6, 394–395
planning your sites, 892
setting up Class A subnets, 378–379
setting up Class B subnets, 376–378
setting up Class C subnets, 372–376
sites as collections of well-connected, 890
subnet addresses, 360
traditional method for subnetting, 372

subordinate CAs, 1030–1032

subscriptions, Event Viewer, 341

supernetting, 382

superscope

creating for IPv4, 496–497
managing, 496–497
overview of, 472–473

SUS (Software Update Services), 994

Switch Embedded Teaming. See SET (Switch Embedded Teaming)

switches

Auditpol.exe, 971
gpmresult, 1016–1017
GPMUpdate, 975–976
managing virtual, 752–755

symmetric multiprocessors, 140, 738

synchronization, troubleshooting replication, 912–913

Sysprep.exe (System Preparation tool)

advantages/disadvantages, 60–61
command-line options, 66
location of deployment utilities, 63
overview of, 57–60
preparing installation for imaging, 66–67
how IP addresses are formed, 403–404
implementing subnets, 362–364
IPv4. See IPv4 (Internet Protocol
version 4)
IPv6. See IPv6 (Internet Protocol
version 6)
