Index

Aftercare and management of central venous access devices, 221
Conclusion, 234
Immediate patient care post-catheter insertion, 222
Going home with a CVAD, 222
Introduction, 221
Long-term care of CVADs, 223
Audit, 233
Maintaining device patency, 227
Accessing the device, 229
Blood sampling, 230
Definition and causes, 229
Flushing solutions, 230
Flushing techniques, 231
Frequency and volume of flush, 231
Managing impaired patency, 228
Patency impairment, 227
Prevention, 228
Maintaining integrity of the device, 233
Catheter damage, 233
Prevention of catheter-related infection, long term, 223
Accessing the CVAD, 226
Exit site and general care, 223
Flushing solutions, 227
Gauze and tape dressing, 225
Introduction, 223
IV-dedicated occlusive transparent dressing, 225
No dressing, 225
Options for dressings, 225
Suture removal, 226
Prevention of catheter-related vein thrombosis, 232
Anticoagulation, 232
Importance of catheter tip position, 232
Applied anatomy of the central veins, 14
Adjacent structures, 26
Acquired, 21
Anatomical variations of central veins, 19
The best approach, 31
Ease of insertion and suitability for ultrasound guidance, 30
Ease of subcutaneous tunneling and access to ports, 29
Risk of bleeding, 29
Risk of infection, 28
Risk of pneumothorax, 29
Risk of thrombosis and embolisation, 28
Risk of vein stenosis, 29
Choosing the best approach to the best vein, 28
Conclusion, 14
Microanatomy, 26
Congenital, 19
Routes of access to a central vein, 19
Anatomy of the SVC, 15
Anatomy of the IVC, 18
Components of vein walls, 26
Wall thickness, 26
What is a central vein?, 14
Where should the catheter tip lie?, 23
Cannulation of the jugular veins, 78
Applied anatomy of the IJV, 78
Basic technique for IJV cannulation, 84
Complications, 87
Conclusion, 90
The external jugular vein, 89
Applied anatomy of EJV, 90
Introduction, 89
Factors influencing success, 87
Insertion techniques, 82
The internal jugular vein, 78
Introduction, 78
Specific considerations, 86
Anatomical variations, 86
Cardiogenic shock, 86
Chronic obstructive pulmonary disease, 86
Coagulopathy, 86
Hypovolaemic shock, 86
Other patient factors influencing choice of site, 87
Catheter design and materials, 57
  Anchorage devices, 71
  Apheresis and Haemodialysis catheters, 71
  Catheter design, 59
    Tip design, 59
  Catheter size, 63
    Multilumen catheters, 64
  Common types of catheters, 64
    Acute care catheter, 64
    Introducer sheaths, 65
    Midline catheters, 66
    Peripherally inserted central catheters, 66
  Conclusion, 75
Infection, 58
  Insertion techniques, 61
    Catheter over needle devices, 62
    Catheter through needle/cannula, 62
    Guidewire or Seldinger technique, 61
  Introduction, 57
  Material differences, 57
  Needle design, 62
  Thrombosis: the relative risks between materials, 58
  Totally implanted ports, 71
  Tunneled cuffed catheters, 69
Central venous access via the subclavian and axillary veins, 101
  Applied anatomy, 101
  Conclusion, 112
  Insertion techniques, 107
    Axillary vein, 109
    Landmark infraclavicular subclavian vein puncture, 107
    Supraclavicular vein access, 111
    Ultrasound-guided axillary vein cannulation, 110
  Use of subclavian and axillary veins, 111
  Introduction, 101
Complications of central venous access, 175
  Air embolism, 177
  Arterial puncture/catheterisation, 181
    Management, 184
    Prevention, 181
    Recognition, 182
  Cardiac arrhythmias, 188
    Definition and incidence, 188
    Prevention, 189
    Recognition and management, 189
  Catheter-related sepsis, 190
    Choice of catheter, 190
    Infection at the exit site/tunnel/port pocket, 191
    Insertion, 190
    Recognition and management, 190
  Catheter-related vein thrombosis, 192
    Anticoagulation, 193
    Importance of tip position, 193
    Investigations, 194
    Management, 19
    Recognition, 192
    Route of access, 193
  Conclusion, 201
  Damage to other neighbouring structures, 187
    Lymphatic damage, 188
    Nerve damage, 188
    Embolised, fractured or irretrievable guidewires and catheters, 198
  Embolism, air, 177
    Management, 178
    Prevention during catheter insertion, 177
    Recognition, 178
  Extravasation injury, 201
  Great vein perforation, 185
    Prevention, 186
    Recognition and management, 186
  Incorrect catheter tip position, 196
    Catheters outside the venous system, 198
    Catheters within the venous system, 197
    Management, 198
    Recognition, 197
  Introduction, 175
  Mechanical phlebitis, 195
    Definition and causes, 195
    Management, 196
    Prevention, 195
  Pleural effusions, 179
  Pneumothorax, 175
    Management, 176
    Prevention, 17
    Recognition, 176
  History of central venous access, 1
  Introduction, 1
    The origins of venous access, 1
    Percutaneous infraclavicular subclavian vein catheterisation, 9
    Routes of insertion, 9
    Supraclavicular approach to subclavian vein catheterisation, 9
Venous access and the development of parenteral nutrition, 5
Imaging, 9
Venous access and chemotherapy, 8

Patient examination and assessment: choice of devices, 34
Cardiovascular, 39
Bull neck, 43
Cachexia, 41
Convex or concave sternums, 41
Fractures and arthritis, 40
Large breasts, 42
Lymphoedema, 42
Neurological, 40
Obesity, 41
Skin and subcutaneous tissues, 43
Stomas, open wounds, tracheostomy, 43
Choice of anaesthetic techniques, 36
Conclusion, 54
Infection issues, 43
Allergies in assessment, 35
Information and informed consent, 35
Biochemical assessment, 46
Catheter selection, 48
Choice of CVAD, 48
Dialysis/apheresis catheters, 52
Non-tunnelled catheters, 50
Peripherally inserted central catheters, PICC, 53
Skin-tunnelled catheters, 51
Subcutaneous ports, 51
Coagulation assessment, 47
Intravenous therapy requirements, 54
Introduction, 34
Laboratory assessments, 46
Physical examination and assessment, 36
Radiological assessment, 45
Assessment of respiratory function, 38
Vascular assessment, 37
Pathogenesis and prevention of intravascular catheter-related infections, 206
Causative microorganisms of catheter-related infections, 209
Conclusion, 215
Development of catheter-related sepsis, 209
Introduction, 206
Prevention of intravascular catheter-related infections, 210
Device, the, 210
Antimicrobial lock solution, 212
Catheter hubs containing antiseptics, 211
In-line filters, 212
Needleless connectors, 212
Prophylactic thrombolysis, 212
Patient, the, 213
Antimicrobial ointments around catheter insertion site, 214
Catheter replacement and/or guide by exchange, 214
Disinfection of the insertion site, 213
Dressings, 213
Site of insertion, 213
Subcutaneous tunnelling, 213
Health care workers, 214
Educational programmes, 215
Hand hygiene methods, 214
Sources of microorganisms resulting in catheter-related infections, 207
Types of intravascular catheter-related infections, 206
Peripherally inserted central catheters, 114
Benefits of PICCs, 119
Catheter rupture/damage, 122
Conclusion, 123
Consent and patient information, 120
Insertion procedures, 120
Ongoing education, 121
Introduction, 114
Measurements, 120
Midline catheters, 115
Objectives, 114
Patient assessment, 115
Peripherally inserted central catheters, 114
Power injection, 122
Selection of patients, 117
Anaesthetic techniques, 119
General anaesthesia, 119
Local anaesthesia, 119
Sedation and analgesia, 119
Condition of limb and veins, 118
Contraindications for placement sites of PICCs, 119
Intended treatment/duration, 117
Location of treatment, 117
Patient preference, 119
Previous problems with venepunctures/VADs, 118
Relevant medical history, 118
Ultrasound, 121
Patient education, 122
Index 253

Practicalities of vascular access utilising ultrasound, 135
Guidance techniques, 137
Transducer and display set up, 135
Rationale for the use of ultrasound, 128
Ultrasound probe selection, 132
Veins, 133

Axillary/subclavian vein, 133
Internal jugular vein (IJV), 133
Verification of needle-tip placement, 139
What is the evidence that ultrasound is helpful?, 131
