Index

A

Aerial photograph
    described, 7
    draping over DEM, 59–60
    setting base heights of, 106

Animated rotation, 84, 94–97

Animation
    camera track, 112
    clearing, 111
    creating, 106–121
    described, 85
    layer track, 113–114
    tracks
        changing speed of, 110
        playing, 109–110

Animation controls, 109–110
Animation manager, 115–121
Animation toolbar, loading, 109
ArcCatalog, previewing data, 15–25

ArcGlobe
    application options dialog, 133
    coordinate system, 123, 271–272
    default draped layers, 131–132
    default elevation layers, 128–131
    draft mode, 126–127
    floating layers, 140
    globe properties, 141–142
    layer types, 127–132, 137–142
    memory and disk cache settings, 134–136
    navigating, 125–126
    rasterized layers, 137–139
    redefining a layer, 139–141
    surface and globe modes, 126

ArcScene
    adding data to, 33, 42, 58, 70, 86, 103, 106
    background color, 27
        setting, 33–34
    coordinate system, 28, 42–51
    latitude and longitude, 28
    multiple Views, 98–102
    navigating, 33–34. See also Navigate tool
    opening a document, 58
    planar x,y coordinates, 28
    Scene illumination, 27–28
    Scene properties, 27–29
    sun azimuth and altitude, 27
    vertical exaggeration, 27, 29, 186
    view settings dialog, 90

Area and volume statistics
    calculating, 296–300
    described, 277–278

ASCII 3D to Feature Class tool, 261

B

Background color, setting, 33–34

Base heights
    described, 30
    setting, 22, 53–54, 59, 62–68, 228–229

Bookmarks, creating, 91–92, 107–108
Index

C
Center on Target tool, 87
Classification color scheme, setting, 23–24, 40–41, 76–77, 212–213, 243–248, 289–290

D
Delaunay triangulation, 174–175
DEM, described, 21, 37, 53, 62, 78–79
Digital Elevation Model. See DEM
Digital orthophoto, described, 59, 106
DOQ. See digital orthophoto
Draping 2D Layers over 3D surfaces, 30–31
Drawing priority, setting, 66–67, 106

E
Elevation raster, described, 3, 21, 30, 32, 52.
See also DEM
Expression Builder dialog, 72–73
Extrusion, 31, 282–284
of 2D features, 69–73

F
Flight simulation, 84, 103–105
Fly tool, 103–105
commands list, 104

G
Google Earth, 143–167, 305–326
altering features with KML, 162–167
creating features in, 154–157
editing features with Form menus, 154–161
feature transparency and height, 159–161
interface, 145–148
layers panel, 147
navigating, 149–150
places panel, 147–149
adding a folder to, 148–149
search panel, 145–146
3D vector features in, 318–320
view features and settings, 150–151

H
Hillshade
creating, 73–75, 269
setting base heights for, 75–76
HTML popups, 158–159, 314–315

I
Identify tool, 20, 46, 50, 95, 233, 292
Import 3D Files tool, 307–309
Interpolate Polygon to Multipatch tool, 301
Interpolation. See Raster interpolation, TIN interpolation
Interpolation barriers, 171
Inverse Distance Weighted (IDW). See Raster interpolation

K
Keyhole Markup Language. See KML
Keyhole, Inc., 143
KML
described, 12–13, 143, 162–167, 305
exporting ArcGIS layers to, 314–317
viewing ArcGIS layers in Google Earth, 317–321

L
Layers
draping 2D over DEM, 62–68
offsetting, 60, 186, 240–241
shading, 24, 31, 54–55
Layer (.lyr) file, creating, 21
Layer properties
coordinate system, 43–51
described, 30–32
LiDAR points
converting to multipoint features, 261–263
described, 256
Line of sight
described, 277
drawing, 289–294

M
MrSID image, 78–79
Multipatch features
attribute table, 302
creating, 301–303, 305–311
described, 11, 275
N
Navigate tool, 17, 33–34

O
On-the-fly projection, 28
Orthographic view, 16, 92

P
Placemarks, 148–149
Planimetric view, 16
Profile graph
creating, 294–295
described, 276

R
Raster. See also DEM
analysis environment, 181–182, 185, 188, 193–194, 198, 202
analysis mask, 199–205
categorical, 178–179
continuous, 6–7, 178–179
discrete, 6, 178–179
image, 7
interpolation methods
described, 169–176
IDW, 171–172, 188–190
Kriging, 173–174
Natural Neighbors, 174–175, 190–191
Spline, 172–173, 180–187
Trend, 175
reclassification methods
aspect, 176, 196–197
described, 176–179
hillshade, 177, 193–195
slope, 176, 198–205, 214–215
symbolizing, 21–25, 37–41
surface model, 7–8
thematic, 7–8, 169, 178–179
types, 6–7
Value Attribute Table, 53

S
Sample points, 169–170
attribute table, 180–181
Scene contrast, setting, 35
Scene illumination, setting, 34–36
Set Observer tool, 89
Shading. See Layers, shading
SketchUp
described, 307
get current view button, 324–325
orbit tool, 323
place model button, 325–326
placing model in Google Earth, 322–326
Steepest Path tool, 276

T
Targets and observers, 83, 86–93
Terrain dataset
adding to ArcGlobe, 270–273
converting to raster, 266–268
creating, 257–265
described, 9–10, 255–256
display properties, 266–267
Terrain to Raster tool, 267–268
Thiessen polygons, 174
3D Analyst
described, 1–4
extension, loading, 15
toolbar, loading, 33, 125
3D Effects toolbar, 64–65, 80
3D Feature classes
attribute tables, 10, 103, 282
described, 10–11, 275
shape field, 10, 103, 282
3D features
converting from 2D, 279–281
digitizing, 284–288
3D Thumbnail, creating in ArcCatalog, 24
3D Vector features, 18–20, 318–320
3D View toolbar, loading, 15
TIN surface model
adding features to, 221–225, 251–252
adding tag attribute values to, 234–241
breaklines, 221
classification, 225–226, 242–248
clip polygons, 222–223
clipping with polygon features, 231–232
TIN surface model (*continued*)
  creating from contour lines, 227–233, 249–250
  described, 8–9, 219–226
  edge types, 242–243
  erase polygons, 223
  fill polygons, 224
  interpolation, described, 219–221
  replace polygons, 222
  symbolizing, 94–95, 231
  symbology
    aspect, 243–248
    elevation, 243–248
    slope, 243–248
Transparency, setting, 80, 139–140, 195, 216
Triangulated Irregular Network. See TIN
2.5 vs. 3D data, 10–11
2D feature class attribute table, 227–228, 280–281
2D vector contours, 227–228

**U**
Unit conversion, feet to meters, 272

**V**
Vertical exaggeration, setting, 37–40, 50–51, 238, 242
View settings
  observer and target positions, 90–91
  orthographic and perspective view, 92
  roll angle and pitch, 93
View Settings dialog, 90
Voronoi polygons, 174–175

**W**
WGS 1984 Geographic Coordinate System, 123

**X**
x,y, and z coordinate values, 5

**Z**
z values, described, 5, 8–11, 30
Zoom to Target tool, 88
z–tolerance, 264, 267
