pressure reduction, 397
process, 392–398
operating conditions, 393–394
processing, aspects, 417–438
products, 436–437
reactor conditions, 390, 424–425
types, 421–424
references, 443–453
research efforts, 399, 408–417
system corrosion, 419
erosion, 419
noncondensable gas, high content, 429–430
solubility/phase behavior, 425–430
technology, maturation, 401
treatment, optimum, 418
Supply chain coordination, 160–161
Surface mining, 13–14
Surface Mining Control and Reclamation Act (SMCRA) of 1977, 21
Suspended magnet, 335–337
Sustainability, 81–83
design, 381–382
indicators, 82
temporal characteristics, 83
Sustainable development, 308
System impacts, capture, 204

T
Tailings, definition, 37
Tailings impoundments
considerations, 37–38
planning/operating, 36–39
Target processes, preassessment, 139–142
Tertiary packaging, 242
Thermolysis, feedstock recycling use, 261
Tie compounds, selection, 145
Time value, 205
Total Cost Assessment (TCA) method, 105
Total emissions, site-generated emissions
(contrast), 195–196
Total suspended solids (TSS), 252
Trommels, 321–322
Tub grinders, 318

U
Uncapacitated case, material flow
allocation, 170
Underground mines, sealing, 27–28
Underground mining, 14–16
environmental considerations, 16
operational cycle, 15
Undersize/underflow, 318
UN Group of experts on the Scientific
Aspects of Marine Pollution (GESAMP), 252
Unit operations, listing, 143
Unit operations, P2 usage, 110–111
Upstream boundary tier entities, 161
U.S. Defense Advanced Research
Projects Agency (DARPA), SCWO
interest, 399
U.S. Environmental Protection Agency (EPA), three Rs, 363
Used packages, energy source, 267
Utility systems, waste minimization, 70–71

V
Vapor-liquid equilibrium, limit, 386
Vertical airflow, 328
Vertical supply chain, double
marginalization, 169–170
Vessel reactor, feature (importance), 422–423
Vessel-type reactors, 396
Vibrating conveyors, 346
Vibrating feeders, 343–344
Vibrating screens, 320–321
Viscosity, 386
Volatile organic compounds (VOCs), 213
Volatile suspended solids (VSS), 252

W
Waste
auditing, 130–152
assessment, 142–148
construction materials, derivation, 268
dead-end-of-pipe treatment, 126
defed, suitability, 417–418
generation, audits, 109
material recovery, 109
reduction, definition, 92–93
sources, 96t
treatment processes, audit, 136
Waste audits
management/staff involvement, 131–134
options, screening/selecting, 149–150
phases, 131–152
preliminary technical/economical
evaluation, 150–151
preparatory work, 131–138
synthesis/preliminary analysis, 148–152
Waste management
audits, 109
costs, 78–79
hierarchy, 90
preference order, 90
options, selection, 257–258
Waste material production, 155
background, 157–161
experimental comparisons, 167–171
introduction, 155–157
references, 173–177
strategic design models, 161–167
Waste minimization
advantages, 128
audits, 130
cycle, 129–130
implementation barriers, 128
phases, 129–130
programs, 127–128
strategies, 67
Waste reduction
  action plan, development, 152
  approaches, 362–366
  options, preliminary prioritizing, 151–152
  packaging, 256–257
Waste-to-energy (WTE) facilities, 366
Wastewater, accounting, 147
Wastewater engineering
  introduction, 207–208
  references, 233–235
