## Part 1 Didactics

### Chapter 1 Fundamental Principles of the Comprehensive Approach

1. The Case for the Four-Part Comprehensive Evaluation...
2. The Details of the Four-Part Comprehensive Evaluation...
3. The Initial Conversation...
4. The Clinical System–Based Masticatory System Examination...
5. Imaging...
6. Articulated Diagnostic Casts...

### Chapter 2 The People Side of Dentistry

1. The Importance of Behavioral and Communication Skills...
2. The All-Important 5 Questions...
3. The Codiscovery Process...
4. Which Approach Is Best—The 4 Quadrants...
5. Dentistry: A Blend of Technical, Emotional, and Intellectual Skills...

### Chapter 3 The 4 Essential Skills of the Comprehensive Dentist

- **Section A** Bite Splint Therapy...
- **Section B** Definitive Occlusal Therapy: Equilibration...
- **Section C** The Diagnostic Blueprint—Wax-Up...
- **Section D** Provisionalization...

### Chapter 4 The 10 Decisions

- **Section A** TMJ Diagnosis and Condylar Position...
- **Section B** Vertical Dimension...
- **Section C** Lower Incisal Edge Position...
- **Section D** Upper Incisal Edge Position...
- **Section E** Centric Stop Design...
- **Section F** Anterior Guidance...
- **Section G** Curve of Spee...
Section H  Curve of Wilson .................................................. 101
Section I  Cusp to Fossa Angle .............................................. 102
Section J  The Aesthetic Occlusal Plane .............................. 105

Part 2  Case Studies ......................................................... 109

Chapter 6  TM Disorders Followed by Reconstruction .................. 147

| Case 1   | Osteoarthritis of the left TMJ managed with bite splint therapy followed by implant-supported restorations and tooth-supported restorations ................................................................. 148 |
| Case 2   | Intracapsular and muscular components of a temporomandibular disorder managed with bite splint therapy followed by occlusal therapy and a full reconstruction ................................................................. 152 |
| Case 3   | Intracapsular and muscle disorder resolved with bite splint therapy followed by occlusal reconstruction with maxillary lingual porcelain veneers ................................................................. 157 |
| Case 4   | Intracapsular and muscle disorder with resultant occlusal plane asymmetry resolved with bite splint therapy and followed by occlusal therapy with restoration only on the lower left ................................................................. 162 |
| Case 5   | Past condylar replacement due to avascular necrosis followed by posterior occlusal reconstruction ................................................................. 166 |
Case 6  Temporomandibular disorder resolved with bite splint therapy followed by definitive occlusal therapy including a maxillary reconstruction and mandibular functional changes with composite ........................................... 171
Case 7  Past mandibular orthognathic surgery to correct maxillary to mandibular malrelationship caused by condylar degeneration; intracapsular and muscle pain resolved with bite splint therapy followed by definitive occlusal therapy with posterior reconstruction and anterior composites .......................... 178
See also: Chapter 15 case 1 .................................................. 350
Chapter 16 case 1 .............................................................. 360

Chapter 7  Restorations to Achieve Aesthetic and Functional Changes ........................................... 183
Case 1  Restoration of anterior aesthetics and anterior guidance in a deep overbite damaged by bruxism with upper and lower anterior reconstruction .............................................. 184
Case 2  Posterior reconstruction with severe interferences to the centric arc of closure .............................................. 189
Case 3  Restoration of aesthetics and anterior guidance damaged by wear by increasing overbite with upper and lower anterior crowns .......................................................... 195
Case 4  Maxillary reconstruction at open vertical dimension to improve aesthetics, length, buccal profiles, and functional landmarks; mandibular restorations only recontoured ...................... 199
Case 5  Maxillary and mandibular aesthetic and functional reconstruction with lab-processed composite restorations to treat amelogenesis imperfecta ........................................... 204
Case 6  Restorations maxillary bicuspid-to-bicuspid done first as part of a comprehensive plan; maxillary left central incisor implant and other functional discrepancies corrected with reshaping and equilibration ........................................... 210
Case 7  Maxillary and mandibular dental reconstruction including 4 dental implants replacing unrestorable teeth; impaired aesthetics due to recession handled with grafts and all porcelain restorations .............................................. 216
See also: Chapter 16 case 1 .................................................. 360

Chapter 8  Complete Implant-Supported Restorations ........................................... 221
Case 1  Complete implant-supported maxillary reconstruction—transitioning the anterior teeth from tooth-supported to implant-supported .............................................. 222
Case 2  Complete maxillary nonremovable restoration supported by 6 implants converted from a completed removable restoration on 4 implants .............................................. 226
Case 3  Complete implant-supported nonremovable maxillary and mandibular reconstructions; transitioning from natural teeth that were not predictably restorable ...................................... 231
| Case 4 | Maxillary extractions, immediate implant placement, immediate loading, and complete nonremovable zirconia restoration with pink porcelain | 237 |
| Case 5 | Mandibular implant bar–supported full removable denture converted to a nonremovable restoration to improve comfort of the neutral zone and phonetics. | 240 |

**Chapter 9 Orthognathics**

**Case 1** Severe anterior open bite corrected with maxillary-only orthognathics and occlusal therapy with upper incisor restorations | 246 |

**Case 2** Mandibular orthognathic surgery and chin implant; managing a temporomandibular disorder during treatment; posterior restorative dentistry including implants | 250 |

**Case 3** Maxillary and mandibular orthognathic surgery with chin advancement; prerestorative occlusal therapy with equilibration and composite additions. | 256 |

See also: Chapter 16 Case 1 | 360 |

**Chapter 10 Bruxism and Wear Reconstruction**

**Case 1** Restoration of worn lower anterior teeth in a deep bite without changing other restorations | 262 |

**Case 2** Severe wear from parafunctional habits restored with a complete reconstruction at an increased vertical dimension of occlusion | 266 |

See also: Chapter 16 Case 2 | 366 |

**Chapter 11 Perioprosthesis**

**Case 1** Full maxillary periodontal-restorative reconstruction improving aesthetics and function; lower posterior reconstruction following conventional surgery, bone and soft tissue grafts, covering recession | 276 |

**Case 2** Posterior reconstruction in conjunction with conventional periodontal surgery; root resection, pocket elimination. | 282 |

**Chapter 12 Implants in the Aesthetic Zone**

**Case 1** Hopeless maxillary central incisor transitioned to an implant-supported restoration (delayed placement and delayed loading) with crowns on the remaining incisors along with occlusal therapy | 290 |

**Case 2** Extraction and immediate implant placement, delayed loading, and restoration maxillary central incisors; pink porcelain to simulate papilla | 296 |

**Case 3** Congenitally missing maxillary lateral incisors, orthodontics to open lateral incisor space, dental implants, and other aesthetic improvements. | 302 |

**Case 4** Congenitally missing upper right cuspids; upper right lateral incisor lost in an accident; implant placed in cuspid position with 2-unit cantilever restoration, pink porcelain to simulate gingival | 307 |

**Case 5** Maxillary central incisor extracted and replaced with a dental implant, delayed placement, and delayed loading | 311 |

See also Chapter 7 case 6 | 210 |
## CONTENTS

### Chapter 13 Removable Implant-Supported Restoration with Natural Teeth

| Case 1     | Maxillary implant-supported bar-retained removable partial denture along with tooth-supported restorations to reconstruct occlusion and vertical dimension. |
| Case 2     | Combination mandibular fixed anterior–removable posterior reconstruction with Locator attachments. |
| See also:  | Chapter 14 Case 4 |

### Chapter 14 Combination Fixed-Removable Restoration on Natural Teeth

| Case 1     | Maxillary bar–supported removable partial denture; lower crowns with semiprecision removable partial denture. |
| Case 2     | Maxillary fixed partial dentures with precision removable partial denture; mandibular bar–supported complete denture. |
| Case 3     | Maxillary telescope case: alumina copings on natural teeth and removable overstructure; mandibular telescope case: Galvano copings on natural teeth and nonremovable overstructures. |
| Case 4     | Mandibular anterior fixed partial denture and posterior removable partial denture with implants and Locator attachments for added support and retention; maxillary reconstruction, telescope case with 1 dental implant included along with 6 teeth. |

### Chapter 15 Implant-Supported Complete Dentures

| Case 1     | Maxillary extensive bone graft followed by implant-supported bars and bar-supported overdenture after managing a temporomandibular disorder; flange needed for lip support necessitating a removable rather than a nonremovable approach. |
| Case 2     | Severe maxillary and mandibular resorption; maxillary bone grafting; maxillary and mandibular implant-supported bar and bar-supported dentures; flange needed for lip and cheek support necessitating a removable rather than a nonremovable approach. |

### Chapter 16 Reconstructions on All Natural Teeth

| Case 1     | Severe anterior overjet handled with occlusal/restorative treatment in lieu of orthognathics; muscular component of a temporomandibular disorder also managed. |
| Case 2     | Failed multiple reconstructions; original deep overbite with current condition in provisional with an opened vertical dimension and anterior overjet; managed with a new reconstruction harmonizing a physiologic deep overbite. |
| Case 3     | Maxillary reconstruction combined with extractions and periodontal surgery to improve periodontal architecture; landmarks of lower acceptable with minor modification. |
| Case 4     | Full mouth reconstruction utilizing crown-lengthening surgery, extractions, single crowns, veneers, and a fixed partial denture sequenced over 2 years. |
Case 5  Maxillary complete fixed partial denture on 9 Galvano
telescopic copings; mandibular anterior fixed partial denture
on 4 Galvano copings .......................................................... 385
