Preface xv

1 Explicitly Correlated Local Electron Correlation Methods 1
Hans-Joachim Werner, Christoph Köppl, Qianli Ma, and Max Schwikl
1.1 Introduction 1
1.2 Benchmark Systems 3
1.3 Orbital-Invariant MP2 Theory 6
1.4 Principles of Local Correlation 9
1.5 Orbital Localization 10
1.6 Local Virtual Orbitals 12
1.6.1 Pseudo-Canonical Pair-Specific Orbitals 12
1.6.2 Projected Atomic Orbitals 16
1.6.3 Pair Natural Orbitals 18
1.6.4 Linear Scaling PNO Generation 22
1.6.5 Orbital-Specific Virtuals (OSVs) 23
1.7 Choice of Domains 24
1.8 Approximations for Distant Pairs 26
1.8.1 Bipolar Multipole Approximations of Electron Repulsion Integrals 26
1.8.2 Approximations of Distant Pair Energies 29
1.9 Local Coupled-Cluster Methods (LCCSD) 33
1.9.1 Weak Pair Approximations 35
1.9.2 Long-Range Cancellations of Terms in the LCCSD Equations 36
1.9.3 Projection Approximations 39
1.10 Triple Excitations 41
1.11 Local Explicitly Correlated Methods 41
1.11.1 PNO-LMP2-F12 42
1.11.2 PNO-LCCSD-F12 49
1.12 Technical Aspects 53
1.12.1 Local Density Fitting 53
1.12.2 Parallelization 56
1.13 Comparison of Local Correlation and Fragment Methods 57
1.14 Summary 60
Appendix A: The LCCSD Equations 63
## Contents

Appendix B: Derivation of the Interaction Matrices  65

2  
**Density and Potential Functional Embedding: Theory and Practice**  81  
*Kuang Yu, Caroline M. Krauter, Johannes M. Dieterich, and Emily A. Carter*  
2.1  
Introduction  81  
2.2  
Theoretical Background  82  
2.3  
Density Functional Embedding Theory  84  
2.3.1  
Basic Theory  84  
2.3.1.1  
Definition of the Embedding Potential  85  
2.3.1.2  
Optimization Procedure  85  
2.3.2  
Embedding Potential Construction—Implementations in Plane-wave Codes  86  
2.3.2.1  
Implementation with Pseudopotentials in ABINIT  87  
2.3.2.2  
Implementation with PAW in VASP  87  
2.3.2.3  
Penalty Functions—Damping the Unphysical Oscillations  91  
2.3.2.4  
Illustrative Example  93  
2.3.3  
Embedded Cluster Calculations  94  
2.3.3.1  
Calculation of Embedding Integrals  94  
2.3.3.2  
Evaluation of the Total Energy  96  
2.3.3.3  
Examples  97  
2.4  
Potential Functional Embedding Theory  101  
2.4.1  
Basic Theories and Technical Details  102  
2.4.1.1  
Definition of Energies  102  
2.4.1.2  
Optimized Effective Potential (OEP) Scheme for Exact Kinetic Energy  103  
2.4.1.3  
Energy Gradient  104  
2.4.1.4  
Summary of the Code Structure  105  
2.4.2  
Illustrative Examples  106  
2.4.2.1  
AlP Diatomic  107  
2.4.2.2  
H\(_2\)O on MgO (001)  108  
2.5  
Summary and Outlook  109  
Acknowledgments  111  
References  111  

3  
**Modeling and Visualization for the Fragment Molecular Orbital Method with the Graphical User Interface FU, and Analyses of Protein–Ligand Binding**  119  
*Dmitri G. Fedorov and Kazuo Kitaura*  
3.1  
Introduction  119  
3.2  
Overview of FMO  120  
3.3  
Methodology  120  
3.3.1  
FMO/PCM Formulation in the Presence of Dummy Atoms  120  
3.3.2  
New Analyses Defining the Desolvation Penalty in the Protein–Ligand Binding  122  
3.3.2.1  
Asymmetric Binding Analysis (ABA)  122  
3.3.2.2  
Symmetric Binding Analysis (SBA)  123  
3.3.2.3  
Symmetric Binding Analysis with Separated Cavitation (SBAC)  123
3.3.2.4 Fragment-Wise Elaboration of SBA in FMO 124
3.3.2.5 Fragment-Wise Elaboration of SBAC 127
3.3.3 Application of Analyses to Protein–Ligand Binding 127
3.4 GUI Development 128
3.4.1 Outline of FU 128
3.4.2 Modeling and Result Visualization 129
3.4.2.1 Modeling of an FKBP Protein Complex 129
3.4.2.2 Creating FMO Input 129
3.4.2.3 Running FMO in GAMESS 131
3.4.2.4 Visualizing FMO Results 131
3.4.3 An Overview of Using FU for a Complex System 133
3.4.4 Examples of Scripting in FU 133
3.4.4.1 Converting Multiple PDB Files into Z-matrix Files 133
3.4.4.2 Drawing Dipole Moments with Arrows 135
3.4.5 Conclusions 136
Acknowledgments 137
References 137

4 Molecules-in-Molecules Fragment-Based Method for the Accurate Evaluation of Vibrational and Chiroptical Spectra for Large Molecules 141
K. V. Jovan Jose and Krishnan Raghavachari
4.1 Introduction 141
4.2 Computational Methods and Theory 142
4.3 Results and Discussion 146
4.3.1 MIM Method for Geometry Optimization 146
4.3.2 MIM Method for Evaluating IR Spectra (MIM-IR) 146
4.3.3 MIM Method for Evaluating Raman Spectra (MIM-Raman) 149
4.3.4 MIM Method for Evaluating VCD Spectra (MIM-VCD) 151
4.3.5 MIM Method for Evaluating ROA Spectra (MIM-ROA) 154
4.3.6 Two-Step-MIM Scheme for Evaluating Raman and ROA Spectra 156
4.4 Summary 157
4.5 Conclusions 158
Acknowledgments 159
References 159

5 Effective Fragment Molecular Orbital Method 165
Casper Steinmann and Jan H. Jensen
5.1 Introduction 165
5.1.1 Effective Fragment Potentials 166
5.1.2 Fragment Molecular Orbital Method 167
5.2 Effective Fragment Molecular Orbital Method 168
5.2.1 Correlation Energies in the EFMO Method 170
5.2.2 The EFMO Gradient 172
5.2.3 Timings and Computational Efficiency 173
5.2.4 Biochemistry with EFMO 174
5.2.5 Fully Integrated EFMO 178
Contents

5.2.6 Remarks, Notes, and Comments 179
5.3 Summary and Future Developments 180
References 180

6 Effective Fragment Potential Method: Past, Present, and Future 183
Lyudmila V. Slipchenko and Pradeep K. Gurunathan
6.1 Overview of the EFP Method 183
6.2 Milestones in the Development of the EFP Method 185
6.2.1 EFP1 Water Model 185
6.2.2 EFP (EFP2) General Model 187
6.3 Present: Chemistry at Interfaces and Photobiology 192
6.3.1 OH Radical Solvated in Water 192
6.3.2 EFP for Macromolecules and Polymers 198
6.4 Future Directions and Outlook 202
References 203

7 Nucleation Using the Effective Fragment Potential and Two-Level Parallelism 209
Ajitha Devarajan, Alexander Gaenko, Mark S. Gordon, and Theresa L. Windus
7.1 Introduction 209
7.2 Methods 211
7.2.1 Brief Overview of DNTMC 211
7.2.2 Brief Overview of EFP 213
7.2.3 Overview of the Two-Level Parallelism Approach 215
7.3 Results 217
7.3.1 Evaporation Rate of Water Hexamer Cluster at 243K 217
7.3.2 Ion Mediated Nucleation 218
7.3.3 Evaporation Rate of Sulfuric Acid from Neutral Sulfuric Acid Dimer Clusters 219
7.3.4 Two-Level Parallel DNTEFP Performance Analysis 221
7.4 Conclusions 223
Acknowledgments 223
References 224

8 Five Years of Density Matrix Embedding Theory 227
Sebastian Wouters, Carlos A. Jiménez-Hoyos, and Garnet K.L. Chan
8.1 Quantum Entanglement 227
8.2 Density Matrix Embedding Theory 228
8.3 Bath Orbitals from a Slater Determinant 230
8.4 The Embedding Hamiltonian 232
8.5 Self-Consistency 234
8.6 Green’s Functions 236
8.7 Overview of the Literature 237
8.8 The One-Band Hubbard Model on the Square Lattice 237
8.9 Dissociation of a Linear Hydrogen Chain 240
8.10 Summary 240
11 MFCC-Based Fragmentation Methods for Biomolecules 323
Jinfeng Liu, Tong Zhu, Xiao He, and John Z. H. Zhang
11.1 Introduction 323
11.2 Theory and Applications 324
11.2.1 The MFCC Approach 324
11.2.2 Electron Density and Total Energy 326
11.2.3 The EE-GMFCC Method for Energy Calculation 328
11.2.4 The EE-GMFCC-CPCM Method for Protein Solvation Energy 331
11.2.5 The EE-GMFCC-CPCM Method for Protein–Ligand Binding Energy 337
11.2.6 The EE-GMFCC Method for Geometry Optimization and Vibrational Spectrum of Proteins 338
11.2.7 The EE-GMFCC-Based Ab Initio Molecular Dynamics for Proteins 340
11.3 Conclusion 345
Acknowledgments 346
References 346
