CONTENTS

Preface ........................................................................................................................................... vii
Acknowledgments ........................................................................................................................... ix

1 Petroleum System and Petroleum Engineering ............................................................................ 1
2 Petroleum Reservoir Rock Properties ............................................................................................ 17
3 Reservoir Fluid Properties ............................................................................................................ 65
4 Equations of States ....................................................................................................................... 103
5 Formation Evaluation .................................................................................................................... 121
6 Formation Testing ........................................................................................................................ 181
7 Fluid Flow in Reservoirs ............................................................................................................... 211
8 Well Test Analysis ........................................................................................................................ 243
9 Reservoir Inflow Performance .................................................................................................... 327
10 Well Production System ............................................................................................................. 369
11 Production System Analysis ....................................................................................................... 397
12 Reservoir Material Balance ........................................................................................................ 421
13 Decline Curve Analysis .............................................................................................................. 451
14 Secondary and Tertiary Recovery Methods ................................................................................ 459
Index .............................................................................................................................................. 503
