alloy  
– aluminum-based 148–151, 159, 206  
– Ele98 56, 128  
– EP79 56, 64, 161, 162, 219, 220  
– EP866 56, 64, 188  
– Invar 153, 155, 156  
– nickel-based 55, 112  
– PWA 1480 177, 178, 184  
– titanium-based 55, 63, 104, 111, 112, 128ff., 137, 151, 160, 164  
– VT 3-1 56, 63, 92, 222  
– VT 8 56, 130, 134  
– VT 8M 56, 223ff.  
– VT 9 56, 128  
– Zh56K 56, 125  
atomic units 20, 22, 75

b  
Bragg angle 45, 46, 127  
Bragg formula 41

c  
chemical potential 7, 8  
coefficient of survivability 133, 134, 224, 225, 231  
compressor blades 128ff., 223ff.  
– coating 225–226  
– dimensions 129  
– distribution contact potential difference 135, 136  
– fatigue limit 133–136, 223–225  
– macroscopic residual stresses 130–133, 144ff.  
– redistribution during operation 155, 157  
– microscopic parameters 132, 133  
– stair method of fatigue test 223–226  
– subgrain size 132  
computer simulation  
– conjugated pairs 89ff.  
– electric conductivity 89–92  
contact electrical resistance  
– behavior during loading and unloading 88–90  
– installation 50  
contact interaction metallic surfaces 87ff.  
contact potential difference 49, 92, 93, 135, 136  
– cycle number until fracture 176, 210  
d  
deep rolling 151, 152  
diffraction technique 33ff.  
– electron scattering 33–35  
– interference function 37  
– LEED method 33–40  
– measurement of macroscopic residual stresses 40–47  
– – experimental installation 44ff.  
– measurement of microscopic stresses 47  
– patterns 34, 37, 162, 163  
– reciprocal lattice 37–40  
– RHEED method 40ff.  
– X-ray studies 40ff., 125, 138, 228  
disks 126–128  
dislocation  
– density 47, 109, 116, 119, 237–239  
– in fatigued aluminum 111  
– in fatigued Ti-based alloy 111  
– intersections 195  
– pile-ups 189–191, 216  
– structure of fatigued superalloys 183  
– velocity 237  
distribution of chemical elements 137ff.
e  
electric current pulse 220–223  
electron  
– density 27–29  
– distribution near surface 18, 24–30  
– scattering 33–35  
– subsystem parameters 22  
– surface step distribution 26, 29  
energy release rate 168, 171
