INDEX

Abundance, resilience and, 257
Action, in preparing for the future, 257
Actual wealth, 43
Aging, as predicament, 54, 56
Agricultural revolution, societies before and after, 129
Agricultural systems, in three future scenarios, 231–245
Agriculture. See also Community supported agriculture (CSA)
coming crisis in, 2–3
“societal role of,” 57–58
to sustain population growth, 198–199
water in, 208–209
Air
degradation in quality of, 215
sources of oxygen in, 214–215
Airlines, in Peak Oil Recognition scenario, 237–240
Alaska
“Peak Oil” in, 145
in Peak Oil Recognition scenario, 240
Algae biofuels, transitioning from oil to, 159
Algal biodiesel, oil versus, 174
Alternative energy sources, 2, 159–176
coil, 166–172
economic growth and, 176
mathematics of, 160–162
natural gas, 175–176
nuclear, 163–166
solar power, wind power, wave power, and other, 172–174
time frame, scale, and costs related to, 162–163, 165–166, 172, 174, 175
transitioning from oil to, 159–160, 160–162, 162–163
American Dream, xiii–xiv, xvii
American Society of Civil Engineers, on U.S. infrastructure, 115
Ammonia, in fertilizer, 201
Amount of change
in exponential growth, 24–25
“speeding up” and, 28–29
Anchoring, inflation and, 103–104
Ancient sunlight, oil/petroleum and coal as, 129–130
Animal life, decline in, 228, 229
Anthracite coal, production and consumption of, 168–169
Anxiety reduction, in preparing for the future, 258–259
Aquifers
depletion of, 205, 207, 209–210, 211
energy and, 209–210
exporting of water and, 208
in relocating for the future, 208
in Slow Tumble scenario, 232–234
inflation and deflation cycles in, 99
Argentina, economic crisis in, 41
Asia
Asset bubbles, 79, 80
and Great Credit Bubble, 87–89
characteristics of, 82–85
Asset prices, bubbles and, 80
Assets
debt and, 66
economic growth and, 221
in preparing for the future, 222
Atmospheric carbon, nuclear energy versus, 163
Australia
oil imports by, 145
in Peak Oil Recognition scenario, 238–240
Australia (continued)
in Slow Tumble scenario, 234
uranium reserves in, 164
Austrian school of economics, on credit
bubbles, 93
Authorities, in problem solving, 15
Auto loans, 66
Automobiles
minerals required to build, 191–193
in Peak Oil Recognition scenario,
239–240
Baby boomers
in foreseeable world economy, 7–9
as predicament, 56
Bacteria, exponential growth of, 22
Bad debt, good debt versus, 71
Bak, Per, 127
Bank credit, as money, 49
Banking, in future, 273–274
Banking crises, 74
Banking system, near collapse of, 220
Banks
bubbles and, 80
economic growth and, 36, 37
Federal Reserve and, 47–49
future growth and, 77
in GDP calculation, 109
money creation by, 45–47, 48
Bartlett, Albert, 29, 30
on economic growth, 166–167
Base metals, in preparing for the future,
262
Base money, 49
Batteries, new technology for, 173, 250
Beinhocker, Eric D., on complexity of
economics, 126–127
Bernanke, Ben, 80
Bills, in money creation, 48
Bingham Canyon Mine, 188
Biocides, agriculture without, 199
Biodiesel, oil versus, 135–136, 173, 174
Biofuels
energy use from, 182
transitioning from oil to, 159
Biomass, oil versus, 135–136
Biosphere, 126
Bituminous coal, production and
consumption of, 168, 169–170
Bond markets, in Slow Tumble scenario,
232–234
Bonds
in foreseeable world economy, 7
future of, 243, 268
in money creation, 48
Borrowing. See also Lending
future of, 252–253
as government revenue source, 120
Boskin Commission, on inflation
measurement, 105–108
Boston University, on United States
liabilities, 75

relocating to new, 263
resilience and, 256–257
Community connections, author and, xiv, xvi
Community supported agriculture (CSA), 256
Commuting, in relocating for the future, 264–265
Competition, in future, 274
## INDEX

Complexity
- in economics, 126–127
- in end of growth, 227
- energy and, 222, 251
- oil shortages and, 156–157
- in open systems, 126
- in Undulating Plateau scenario, 242
- via surplus energy, 138–139

Complex societies, surplus energy as creating, 129

Complex systems
- energy needs of, 141–142
- inherent unpredictability of, 127–128
- unpredictability of, 127–128, 243

Compounding
- alternative energy sources and, 172
- as exponential growth, 29–30
- pension underfunding and, 118
- supply and demand of oil and, 156–157

Computers
- in GDP calculation, 109–110
- modeling sand pile behavior with, 127–128

Concentrated energy, diffuse energy versus, 179–180, 181. See also Energy density

Confederate money, 43

Conflict, future world and, 11

Conflicts of interest, investment and, 15–16

Congress
- entitlement programs and, 66–67
- in money creation, 47–48

Conservation
- future financial services and, 271–272
- in Peak Oil Recognition scenario, 239–240

Consultants, future government employment for, 272–273

Consumer loans, 65–66

Consumer Price Index (CPI), 105, 107, 108, 109, 110

Consumption
- energy for, 131
- investment and, 17
- in Slow Tumble scenario, 233–234

Consumptive debt, 76
- as non–self-liquidating debt, 71
- Convergence, of future risks, 220, 223–225

Coolant, water as, 209–210

Cooperative stores (co-ops), in relocating for the future, 263

Copper (Cu)
- mining of, 188–189
- ore quality and quantity of, 188–189
- Copper nuggets, 188, 189
- Coral reefs, destruction of, 214
- Core inflation measure, 104–105
- Corn-based ethanol, oil versus, 136, 137, 173

Corporate bonds, 66

Cost
- future increase in food, 203
- to replace oil with alternative fuels, 162–163, 165–166, 172, 174, 175
- Cost of living, cost of survival versus, 106
- Cost of living adjustment (COLA), truthful inflation reporting versus, 108
- Cost of survival, cost of living versus, 106

Crash Course, The Internet seminars, xiii–xv

Credit
- as bubble fuel, 81, 82–85
- cutting off, 70
- debt and, 65–71
- decline in personal savings related to, 117, 121–122
- economic growth and, 221
- in end of growth, 227
- future of, 252–253
- and Great Credit Bubble, 87–89
- money printing and, 98
- in money system, 43–44
- peak global oil production and growth of, 149–150
- in preparing for the future, 261–262
- worldwide expansion of, 99–100

Credit bubbles, 79

Credit card debt, 66

Credit expansion, investment and, 17

Credit market debt, 66
- exponential growth of, 89–91
- in United States, 68–70, 71
- total, 50

Credit markets, 65–66
- exponential debt in, 89–91

Credit systems, in future, 273–274

Critical insight, foreseeable world economy and, 9

Crop production, required to sustain population growth, 198
Crops, fertilizers required by, 201
Crop varieties, improvements in, 198
Crop yields, optimizing, 251

- Farming
  - future food supplies and, 269–270
  - improving practices in, 203
  - water depletion and, 210
- Farmland
  - in relocating for the future, 264
  - required to sustain population growth, 198
  - tract housing versus, 197
- Fast breeder reactors, as nuclear fuel, 165
- Federal Funds Rate, 91
- Federal prison system, “money” in, 41, 42
- Federal Reserve (“the Fed”)
  - base money and, 49
  - bubbles and, 80, 84–85
  - in debt-based money system, 51
  - economic growth and, 37
  - housing bubble and, 85–86
  - inflation as controlled by, 103–104
  - interest rates set by, 91–92, 93
  - money creation by, 46–47, 47–49, 49–51
  - money management by, 43
  - in Peak Oil Recognition scenario, 237–240
  - quantitative easing by, 100–102
  - on United States liabilities, 75
- Federal Reserve Act of 1913, 47
- Financial concepts, author and, xiii, xiv, xv–xvii, 8–9
- Financial services, in future, 271–272
### Financial system, economic growth and, 36
- FIRE (Finance, Insurance Real Estate) sector, in Peak Oil Recognition scenario, 235–240
- First Law of Thermodynamics, 177–178
- First World, well maintained infrastructure in, 115
- Fiscal collapse, in Peak Oil Recognition scenario, 237–240
- Fish
  - depletion of world’s, 213–216
  - toxins in, 214
- Fisheries
  - decline in, 228
  - demise of shore-based, 216
- Fishing, 213
- Fit, goodness of, 89–90
- “Fixing the left axis,” turning the corner in exponential growth and, 27–28, 30–31

### Food
- complex societies and, 129
- depletion of, 229
- energy required to produce, 140
- exporting, 207–208
- future of, 243, 250–251, 269–270
- global requirements for, 198
- growing one’s own, 251
- grown locally, 251
- money and future of, 274
- physical need for, 130
- removed from inflation statistics, 104–105
- resilience and, 256
- self-sufficiency in producing, 258
- water and, 205, 206, 207–208
- Food bubble, water and, 208–209
- Food pyramid, 215
- Food shortages, 156
  - water shortages and, 205, 206, 207–208, 210–211
- Food storage, future food supplies and, 270
- Food systems, future world and, 12
- Foreign banks, in preparing for the future, 262
- Foreign languages, author’s work translated into, xvi
- Formulas, 89
- Fossil aquifers, 207
- Fossil fuels, 183. See also Coal; Oil entries; Natural gas; Petroleum as ancient sunlight, 129–130
  - carrying capacity of earth and, 27
  - in coming agricultural crisis, 2–3
  - energy resources to replace, 2
  - in foreseeable world economy, 8
  - solar power versus, 250
  - stopping waste of, 251
  - in three future scenarios, 231–245
  - “Fourth E.” See Exponential growth
- Fractional reserve banking, in money creation, 45–47, 49
- France, nuclear power use in, 164
- Free checking, in GDP calculation, 109
- Fresh water
  - depletion of, 205–211
  - depletion of fish from, 213
- Frozen Margarita model of oil extraction, 142–143, 144
- Frugality, prorligacy versus, 69–70
- Fuel, removed from inflation statistics, 104–105
- Fuel sources, for nuclear power plants, 163–164
- Fuel triage, in Peak Oil Recognition scenario, 236–240
- Fulfillment, personal, 275
- “Full faith and credit,” U.S. dollars backed by, 43–44

### Future
- author’s preparations for, xiv
- bubbles in, 79
- creating opportunities in, 11–13
- current economic predicament and, 72–73, 73–74
- debt and, 65, 70
- effects of money printing on, 98
- end of growth in, 227–230
- extrapolating past into, 219
- foreseeing, 7–9
- impact of U.S. savings rate on, 116, 121–122
- inflation and, 103–104
- liabilities and, 66
  - of mineral resources, 194–195
  - net energy and, 131–138
  - of oceans, 215–216
  - opportunities in, 267–275
  - outlook for next 20 years, 219–226
  - “Peak Oil” and, 141–142
  - preparing for, 244–245, 255–265, 267–275
  - of soil nutrients, 202
three scenarios for, 231–245
using existing resources in, 249–254
of water, 210–211

Skills, in self-sufficiency, 258. See also “Reskilling”; Shop skills
Skill sets
  in future, 268–269
  future management, 274
  in relocating for the future, 263
Slow Tumble scenario, economic future in, 232–234
Small steps, in preparing for the future, 259–260
Smith, Adam, on wealth, 61–62
Sociability, in relocating for the future, 263–264
Social contract, money as, 60–61
Social gains, 254
Socialism, in end of growth, 228
Social limitations, on adopting existing technologies, 250
Social movement, toward long-term prosperity, 254
Social order, oil shortages and, 156–157
Social Security, 75
  official debasement of statistics on, 104
  truthful inflation reporting and, 108
  underfunding of, 120, 121–122
Social unrest, future, 220
Social upheaval, bursting bubbles in, 79–80
Society
  economic growth of, 128–129
  energy needs of, 141–142
  net energy available to, 132–138
  truthful inflation reporting and, 108
  Sociological events, bubbles as, 84
Soil
- in coming agricultural crisis, 2–3
- decline in, 229
- dependence of civilization on, 197
- depletion of, 197–203
- dirt versus, 198–199
- in food production, 250–251
- in relocating for the future, 264
- replacing fertility of, 202–203

Soil erosion, 202
Soil nutrients, depletion of, 200
Soil quality, as wealth, 57–58

Solar power
- fossil fuels versus, 250
- future energy supplies and, 271
- future opportunities in, 271
- oil versus, 137, 160, 161–162, 172
- self-sufficiency in, 258
- transitioning from oil to, 159

Solutions, to problems, 53–56
Sonora, California, farmland and tract housing near, 197

Sources of energy, in foreseeable world economy, 8
South America, in South Sea Bubble, 81–82
South Sea Bubble, 81–82
South Sea Company, 81–82
Spain, in South Sea Bubble, 81–82
Special Treasury bonds, as accounting fraud, 120

Speculation, inflation and, 44
“Speeding up,” during exponential growth, 28–29, 30–31, 34
Sperm whales, toxins in, 214
Spindletop oil field, 134
Spread, in money lending, 46
Stability, of money, 61
Stainless steel, cobalt in, 195–196

Standard of living
- author’s, xvi
- declining U.S., 120
- economic growth and, 37
- world population and, 253

State pensions, underfunding of, 117–119, 121–122
States, liabilities of, 75
State services, cuts in, 118

Statistics
- government debasement of economic, 103–113
- official debasement of unemployment, 104

Status quo, perpetuating, 11
Steel, cobalt in, 195–196
Steel-making industry, coal for, 168
Stein, Herbert, 65
“Step Zero,” in preparing for the future, 259–260
Stockbrokers, reliability of, 16
Stock bubble, 79, 82
Federal Reserve and, 84–85
Stock keeping units (SKUs), 126

Stock markets
- in Peak Oil Recognition scenario, 237–240
- post-2007 plunge in, 1
- in Slow Tumble scenario, 234

Stock prices, in South Sea Bubble, 81–82

Stocks
- dumping, 16–17
- in foreseeable world economy, 7
- future of, 243, 268

Storage, of electricity, 173
Store of value, money as, 42

Straw in Juice-Box model of oil extraction, 142, 143

Student loans, as investment debt, 71
Subbituminous coal, production and consumption of, 168, 169–170
Subprime loans, 17
Subscription newsletters, author’s economics, xvi

Substitution, in government inflation statistics, 105–106
Sun, as energy source, 126
Sunlight, oil/petroleum and coal as ancient, 129–130
Supply and demand, for global oil, 155–156, 156–157
Supply chains, future of, 243

Surface water
- aquifers versus, 207
- depletion of, 206
- economic growth and, 37–38

Surplus
- growth due to, 128
- prosperity and, 38–39

Surplus energy
- economic growth due to, 128–130
- net energy and, 132, 137
- prosperity via, 138–139
- uses of, 131

Surplus-energy-perpetual-motion machine, 180
Surprises, in economic future, 243–244, 268
Survival, in coming economic crisis, 3–4
Sustainability, investment and, 17–18. See also Unsustainability
Systems. See Agricultural systems; Banking system; Closed system; Complex systems; Credit systems; Debt-based money system; Federal prison system; Financial system; Food systems; Just-in-time delivery systems; Just-in-time food systems; LET systems; Mass transit systems; Money system; Open system
Tang, Chao, 127
Target setting, in preparing for the future, 257–258
Tar sands, oil reserves in, 134–135, 152
Taxation
future of, 244
as government revenue source, 120
inflation as, 67–68
paying off debt via, 96–97
pension underfunding and, 118, 119
Technological advances, growth due to, 128
Technology, 219
alternative energy sources via, 2
for batteries, 173
energy and, 222
energy creation and, 177–181
energy transformation and, 181
energy transitions and, 181–182, 182–183
in foreseeable world economy, 8
future uses of existing, 249–250
future world and, 13
limits of, 180–181
new, 249–250
to replace oil with alternative fuels, 162–163, 177–181
versus laws of energy, thermodynamics, and gravity, 180
Tenant farmers, future food supplies and, 270
Tertiary wealth, 58, 59–60, 61, 62, 125
economic growth and, 62
future of, 243, 268
future opportunities in accumulating, 267
Thermodynamics
First Law of, 177–178
laws of, 226
Third World, water supply depletion in, 208–209
30-year Treasury bonds, yield from, 92
This Time Is Different (Rogoff & Reinhart), 74–75, 99, 101
“This time is different” syndrome, 74–75, 85, 99–100, 225–226
Thorium (Th), as nuclear fuel source, 165
“Three Es.” See Economy; Energy; Environment
Thrift, in Peak Oil Recognition scenario, 240
Time
money versus, xvi
required to replace oil with alternative fuels, 162–163, 165–166, 172, 174, 175, 181–182
Timelines
for coming economic crisis, 223–225
for three future scenarios, 231–245
Titusville, Pennsylvania, first oil well drilled in, 144–145
Total credit market debt, 50, 51, 66
in Great Credit Bubble, 87–89, 89–91
in United States, 68–70
Toxic buildups, in sperm whales, 214
Tract housing, farmland versus, 197
Trade
debt defaults and, 97
post-2007 plunge in global, 1
Trade deficits
in Peak Oil Recognition scenario, 238–240
in United States, xiv
Transportation, in relocating for the future, 264–265
Transportation energy
from natural gas, 175–176
from oil, 173
from wood, coal, and oil, 162
Treasury bills, in money creation, 48
Treasury bonds, 66
as debts, 67
future world and, 12
