Index

Note: Page numbers in italic refer to figures and/or tables

accidental dural puncture 203–4
acupressure bands in nausea/vomiting prophylaxis 145, 146–7, 148, 149
adrenocorticotropic hormone (ACTH)
in management of postdural puncture headache 199
age and back pain 209–10
airway assessment 234
changes related to pregnancy 233–4
management
comparison between obstetric and non-obstetric patients 225–36
in pre-eclampsia 128
albumin preload for spinal anesthesia 93, 94
alizapride in pruritus prophylaxis 135, 139, 149
α-adrenergic agonists in spinal anesthesia 101, 102–3, 104, 105, 106
angiotensin II in spinal anesthesia 101, 103, 104, 106
ANP see atrial natriuretic peptide
antinuclear antibodies 168
antioxidant and consent 3
back pain
acute/subacute/chronic 208
and age 209–10
associated with epidural analgesia/anesthesia 210–15
causes 208–9
following epidural blood patch 202
low 208–9
in pregnancy 209–10
bed rest in management of postdural puncture headache 197, 200, 202
birth plans
and consent 3
refusal of epidural 3, 8–9
bleeding time (BT)
and neuraxial anesthesia 168–9
in thrombocytopenia 165
blood loss, maternal, and type of anesthesia in cesarean section 113, 118–20, 129
blood pressure, maternal, and type of anesthesia in cesarean section 113, 118–20
blood volume increase
by colloid preload 93, 94–5, 96
by crystalloid preload 90, 91–2, 93, 96
effects on hypotension following spinal anesthesia 89–100
body mass index and postdural puncture headache 194
bradycardia
fetal, and intrathecal opioids 68–76
maternal
in spinal anesthesia 89
in vasopressor therapy 105
breastfeeding post-cesarean section, and type of anesthesia 113
breech position 217
cesarean section 217
Term Breech Trial 217
BT see bleeding time
bupivacaine 56
as analgesia for external cephalic version 221, 223
anesthetic outcomes 64, 65
and fetal bradycardia 69, 70, 71, 72–3
and incidence of postdural puncture headache 196
compared to levobupivacaine 56, 57, 58, 59, 63, 65
compared to ropivacaine 56–9, 58–64, 65
minimum local anesthetic concentration (MLAC) studies 57, 58, 59
neonatal outcomes 64, 65
obstetric outcomes 59, 64, 65
potency 57–9, 60
requirements for 57–9, 60
studies 61–3
butorphanol in pruritus prophylaxis 135, 138–9
caffeine in management of postdural puncture headache 197–8, 200
caloric intake during labor 178, 183–8, 189
and Apgar score 188, 189
and duration of labor 185, 186
and incidence of vomiting 185, 187, 188
and mode of delivery 185, 186, 187
and oxytocin use 188, 189
and plasma metabolite levels 188, 189
capacity and consent 3
carbonic acid 121
case-controlled trials, lack of assessment scales 238
causation, rules of 68
CEI see continuous epidural infusion
central blood volume increase
by colloid preload 93, 94–5, 96
by crystalloid preload 90, 91–2, 93, 96
effects on hypotension following spinal anesthesia 89–100
cesarean section
for breech position 217
incidence after epidural analgesia 17
postoperative analgesia multimodal 152–61
neuraxial opioids 132–51
safety comparison of general and regional anesthesia 108–31
cohort trials, lack of assessment scales 238
colloid solution preload for spinal anesthesia 93, 94–5, 96
consent see informed consent
Consolidated Standards for Reporting of Trials (CONSORT) checklist 237
continuous epidural infusion (CEI)
compared with patient-controlled epidural analgesia 23–9
crystalloid solution preload for spinal anesthesia 90, 91–2, 93, 96
cyclizine in nausea and vomiting prophylaxis 145, 146, 148
cyclopropane, comparison with nitrous oxide 45, 49, 52, 53
desflurane, comparison with nitrous oxide 45, 46, 50, 53
dexamethasone in nausea and vomiting prophylaxis 143, 144, 145, 146, 148
dextran epidural patch 203
preload for spinal anesthesia 93, 95
dextrose, intravenous, during labor 183
diamorphine, neuraxial
in combination with non-steroidal anti-inflammatory drugs (NSAIDs) 152–61
prevention and treatment of side-effects 132–51
diclofenac in combination with neuraxial opioids 153, 155, 156, 157, 158
diphenhydramine
in pruritus prophylaxis 135, 139
in pruritus treatment 140, 141–2
disseminated intravascular coagulation (DIC) 170
drinking during labor see caloric intake during labor
droperidol
in nausea and vomiting prophylaxis 142, 143, 144, 146, 148
in pruritus prophylaxis 135, 139
dural puncture, accidental 203–4
eating during labor see caloric intake during labor
EBP see epidural blood patch
eclampsia 128
ECV see external cephalic version
ecephalopathy, neonatal 127, 128
endotracheal intubation 225
enflurane, comparison with nitrous oxide 45, 47, 51, 53
Entonox® 38, 45
see also nitrous oxide
ephedrine and fetal acidosis/acidemia 104, 127
in spinal anesthesia 101, 102–3, 104, 105, 106
transplacental diffusion 106
epidemiology, terminology 208
epidural anesthesia
back pain associated 210–15
catheter design and incidence of complications 77–85
disseled 83–4
and inadequate analgesia 78, 80, 82, 84
intravascular cannulation 78, 81, 84
material 80, 81, 82, 84
movement/migration 83
open/closed tip 84
paresthesias on insertion 78, 80, 82, 84
positioning 83
replacement 84
spread of anesthetic from studies 78, 79–80
epidural saline in management of postdural puncture headache 200, 201, 202–3
epidural anesthesia space, anatomy and physiology 83–4
epigastric impedance technique 181
external cephalic version (ECV), analgesia for 217–24
fentanyl as analgesia for external cephalic version 221, 222
effects on gastric emptying 181
and fetal bradycardia 69, 70, 71, 72–3
and incidence of postdural puncture headache 196
pruritus due to 139
non-obstetric 7–8
opioids, prevention and treatment of side-effects 132–51
postpartum recall of risk explanation 5
in pre-eclampsia 173–4
study protocols 11, 13–16, 17
use with transcutaneous electric nerve stimulator (TENS) 31
epidural anesthesia
back pain associated 210–15
for external cephalic version 217–24
hypotension associated, use of vaspressors 101–7
in parturient with thrombocytopenia 165–77
in pre-eclampsia 172–4
safety for cesarean section 108–31
epidural blood patch (EBP)
in management of postdural puncture headache 199, 201, 202
side-effects 202
epidural catheters
comparison of nylon uniport and nylon multiport models 78, 80, 81–2, 84
depth of insertion 83, 84
design and incidence of complications 77–85
dissolved 83–4
and inadequate analgesia 78, 80, 82, 84
intraocular cannulation 78, 81, 84
material 80, 81, 82, 84
movement/migration 83
open/closed tip 84
paresthesias on insertion 78, 80, 81, 84
positioning 83
replacement 84
spread of anesthetic from studies 78, 79–80
fentanyl as analgesia for external cephalic version 221, 222
effects on gastric emptying 181
and fetal bradycardia 69, 70, 71, 72–3
and incidence of postdural puncture headache 196
pruritus due to 139
fetal acidosis/acidemia
and type of anesthesia in cesarean section 121, 122–6, 127, 129
and use of vasopressors 104, 127
fetal bradycardia and intrathecal opioids 68–76
fibrin glue, epidural patch 203
first stage of labor, duration in epidural analgesia 18
fluid administration in prevention of postdural puncture headache 197, 200
forceps delivery, incidence in epidural analgesia 18
gastric emptying during pregnancy and labor 179–81
gastroesophageal reflux during pregnancy 179
gelatin
epidural patch 203
preload for spinal anesthesia 93, 95
general anesthesia
changes in incidence 111
emergency 225, 234
for external cephalic version 217
reduction in use 182
safety comparison with regional anesthesia in cesarean section 108–31
H₂ antagonists 182
headache see postdural puncture headache
HELLP syndrome 128–9
and platelet count 167, 168
and platelet function 169–70
type of anesthesia and neurologic outcome 173
hematoma, neuraxial 165, 171–5
hetastarch (HES) preload for spinal anesthesia 93, 94–5
high-risk parturients, influence of type of anesthesia in cesarean section 127–9
hydroxyzine in pruritus prophylaxis 135, 139, 149
hypertension
due to prophylactic vasopressors 105
and platelet function 169
and type of anesthesia in cesarean section 118–20
hypotension
definition 89–90
effects on uteroplacental perfusion 89
and postoperative nausea/vomiting 148
in spinal anesthesia
effect of increased central blood volume 89–100
use of vasopressors 101–7
and type of anesthesia in cesarean section 118–20
idiopathic thrombocytopenic purpura (ITP)
management guidelines 172
and platelet count 168
and use of neuraxial anesthesia 165–77
incidence
definition 208
lifetime cumulative 208
indomethacin, postoperative analgesia, in combination with neuraxial opioids 153, 154, 156, 157
informed consent 3–9
current practice 8
extent of information supplied 6–7
and risk 5
studies 3–8
and written information 5–6
written/verbal 8
instrumental vaginal delivery, incidence in epidural analgesia 18
intrathecal catheter insertion following accidental dural puncture 203–4
intrathecal space, approach to, and incidence of postdural puncture headache 196
intrauterine growth restriction (IUGR)
and type of anesthesia in cesarean section 127–8
isoflurane, comparison with nitrous oxide 45, 46, 50
ITP see idiopathic thrombocytopenic purpura
IUGR see intrauterine growth restriction
Jadad scale 237–8
ketorolac in combination with neuraxial opioids 156, 159
ketosis, maternal 182–3
and caloric intake during labor 188, 189
prevention 185
lactic acid 121
legs
compression, in spinal anesthesia 96, 97
elevation, in spinal anesthesia 96, 97
wrapping, in spinal anesthesia 96, 97, 99
levobupivacaine 56
compared to bupivacaine 56, 57, 58, 59, 63, 65
compared to ropivacaine 56, 57, 58, 59, 65
minimum local anesthetic concentration (MLAC) studies 57, 58, 59
obstetric outcomes 65
potency 57–9, 60
requirements for 57–9, 60
studies 61–3
lidocaine as analgesia for external cephalic version 221, 222
lidocaine–glucose injectate and incidence of postdural puncture headache 196
local anesthetic, choice of in labor and delivery 56–67
Mallampati score 233, 234
maternal mortality
characteristics associated 110
comparison of regional and general anesthesia in cesarean section 109–11, 112
due to aspiration of gastric contents 181–2
historical perspective 178–9
mean arterial pressure (MAP) and hypotension 89–90
Mendelson’s syndrome 179
meperidine, use with transcutaneous nerve stimulator (TENS) 31
mepivacaine and incidence of postdural puncture headache 196
metharaminol in spinal anesthesia 101, 103, 104, 105, 106
methotrexate in spinal anesthesia 101, 103, 104, 105, 106
methoxylurane, comparison with nitrous oxide 45, 47–9, 51–2, 53
methylxanthines in management of postdural puncture headache 198
metoclopramide in nausea/vomiting prophylaxis 142, 143, 144, 148
in pruritus prophylaxis 135, 139
MOF see methoxyflurane
morphine, neuraxial
in combination with non-steroidal anti-inflammatory drugs (NSAIDs) 152–61
and incidence of postdural puncture headache 196
prevention and treatment of side-effects 132–51
risk factors
  patient-related 193–4
  procedure-related 194–6
posterior pelvic pain 209–10
postoperative analgesia
multimodal 152–61
neuraxial opioids 132–51
pre-eclampsia
  and neuraxial anesthesia 172–4
  and platelet count 167, 168
  and platelet function 169–70
  and type of anesthesia in cesarean section 128–9
prepregnancy
  back pain in 209–10
  gastric emptying during 179–81
preterm neonate, influence of type of anesthesia in cesarean section 127
prevalence
  period 208
  point 208
terminology 208
progress of labor, influence of epidural analgesia 10–22
propofol
  in pruritus prophylaxis 135, 139
  in pruritus treatment 140, 142
pruritus in neuraxial opioid use 75, 132, 133
  prophylaxis 133–40, 149
  treatment 140–2
puerperal sepsis 178
pushing, second-stage, limitation of 197
randomized controlled trials
  Jadad scale 237–8
  lack of blinding 36
rapide sequence induction of anesthesia 82
regional anesthesia see epidural analgesia; spinal anesthesia
rehydration, effects on labor outcome 183
risk
  and consent 5–6
  extent of information regarding 6–7
  postpartum recall 5–6
  written information concerning 5–6
ropivacaine 56
  anesthetic outcomes 64, 65
  compared to bupivacaine 56–59, 58–64, 65
  compared to levobupivacaine 56, 57, 58, 59, 63, 65
  minimum local anesthetic concentration (MLAC) studies 57, 58, 59
neonatal outcomes 64, 65
  obstetric outcomes 59, 64, 65
potency 57–9, 60
  requirements for 57–9, 60
  studies 61–3
rules of causation 68
safety in anesthesia
  comparison of general and regional methods 108–31
