polyacrylic acid catalyst 226
polydimethylsiloxane support 143
polyethylene glycol supports see PEG
polyisobutylene support 140
polymer incarceration 50–1, 357–60, 387
polymer-microencapsulation see microencapsulated catalysts
polymer-supports see dendrimer; insoluble resin-supported; soluble polymer-bound
polymeric chiral catalysts see linear polymeric chiral catalysts
polymerization reactions
supercritical carbon dioxide systems 235
thermomorphic 138–42
poly(N-alkylacrylamide) supports 121–3, 125, 132, 146
polyphenylene, cross-linked 367–74
polystyrene supports 49–50, 78
amphiphilic PS–PEG resins 50
BOX ligands 452, 453, 455
proline 443, 444, 445
polysulphones 353
poly(xylyliovigen dibromide) 354–5
porphyrin catalyst 309
precursor, catalyst 2–3
Index

proline-based catalysts 320–8
applications tabulated 95
cyclodextrin supported 326, 449–50
dendrimer supported 447–9
fluorous chiral catalysts 187–9
insoluble resin-supported 54–5, 63–5, 322–4
and ionic liquids 20, 287–90, 291, 292–3, 326, 446–7
magnetite and layered double hydroxides 451
polymer supports compared 442–6
prolinamides 326–8
silica supported 324–6, 450–1
soluble polymer-bound 89, 95–6
2-pyridyldiphenylphosphine 53
pyrrolidine-based organocatalysts 317–18
pyrrolidine sulfonamides 188, 189–90
radiopharmaceuticals 413, 414
rate/reaction profile 2, 9
reactor design 227–8
recovery, catalyst
assay techniques see catalyst recovery strategies 79, 428
reduction
fluorous chiral catalyst 188, 191
insoluble resin-supported catalysts 61–2
microencapsulated catalyst 246, 372
organocatalysed 314–15, 333–4
see also hydrogenation
resting state, catalyst 3–5
ring-closing metathesis 385, 387, 395, 400–1
ring-opening
epoxides in ionic liquids 283
metathesis polymerization (ROMP) 79, 134, 385, 387
Ruhrchemie/Rhône-Poulenc process 201, 202
salen complexes
fluorous chiral catalysts 182–5
in mini flow reactor 383
salen-containing polymers 108
self-supported catalyst 160
silica supported 26, 383
soluble polymers 26, 90–2, 93, 383
SBA-type silica 18
segmented flow systems 416–17
self-encapsulation 62
self-supported asymmetric catalysts 155–77
background and approaches to 155–6
multitopic chiral ligands linked with metal centres 168–72
post-synthetic modifications of coordination polymers 163–8
subunits linked via metal-ligand coordination 156–63
Shell-SHOP process 201
Shibasaki’s catalyst 169–70
shock-wave reactor 227
silanes see organosilanes
silazane derivatives 21
silica supports
and bis(oxazolines) immobilization 455–8
described 17–18
mesocellular foam 383, 455–6, 457
for mini flow reactors 382–7
and proline immobilization 450–1
see also mesoporous silica functionalization
silicone resin 62
silylation 20–1
co-condensation method 23–5
and microencapsulated catalyst 343
post-synthetic grafting method 21–3
silica support morphology
and internal pore surface 31–5
particle size 29–31, 32
silylcyanation 421
singlet oxygen 419–20
smart catalyst supports 125
soluble polymer-bound catalysts 77–100
achiral catalysts 81–2
palladium for cross coupling 84–5, 86
phase transfer catalysts 85, 87
ruthenium–carbene for olefin metathesis 82–4
TEMPO oxidation 87–8
chiral catalysts 88–9, 100–2
metal–binaphthyl complexes 92, 94
metal–bis(oxazoline)
complexes 89–90, 91
metal–salen complexes 90, 92, 93
organocatalysts 94
chicona alkaloids 96
imidazolidinones and thioureas 96, 97
phase transfer 96, 97
proline-based 95
general considerations/
background 77–9, 98
immobilization strategies 79–80
metal catalysts 81, 89
organocatalysts 81, 89, 94
