Contents

Preface

1 History of OLEDs

2 Fundamentals of OLEDs
   2.1 Principle of the OLED
   2.2 Fundamental Structure of the OLED
   2.3 Features of the OLED

3 Light Emission Mechanism
   3.1 Fluorescent OLEDs
   3.2 Phosphorescent OLEDs
   3.3 Thermally Activated Delayed Fluorescent OLEDs
   3.4 Energy Diagram
   3.5 Light Emission Efficiency

4 OLED Materials
   4.1 Types of OLED Materials
   4.2 Anode Materials
   4.3 Evaporated Organic Materials (Small Molecular Materials)
      4.3.1 Hole Injection Materials
      4.3.2 Hole Transport Materials
      4.3.3 Emitting Materials and Host Materials in Fluorescent Emission Layer
      4.3.4 Emitting Materials and Host Materials in Phosphorescent Emission Layer

References
4.3.5 Emitting Materials and Host Materials in TADF Emission Layers
4.3.6 Electron Transport Materials
4.3.7 Electron Injection Materials and Cathodes
4.3.8 Charge-Carrier and Exciton Blocking Materials
4.3.9 N-Dope and P-Dope Materials
4.4 Solution Materials
4.4.1 Polymer Materials
4.4.2 Dendrimers
4.4.3 Small Molecules
4.5 Molecular Orientation of Organic Materials

5 OLED Devices
5.1 Bottom Emission, Top Emission, and Transparent Types
5.2 Normal and Inverted Structures
5.3 White OLEDs
5.4 Full-Color Technology
5.4.1 RGB-Side-by-Side
5.4.2 White + CF
5.4.3 Blue Emission with Color Changing Medium (CCM)
5.5 Micro-Cavity Structure
5.6 Multi-Photon OLED
5.7 Encapsulation
5.7.1 Thin Film Encapsulation
5.7.2 Desiccant Technologies

6 OLED Fabrication Process
6.1 Vacuum Evaporation Process
6.1.1 Mask Deposition
6.1.2 Three Types of Evaporation Methods
6.1.3 Ultra-High Vacuum
6.2 Wet Processes
6.3 Laser Processes

7 Performance of OLEDs
7.1 Characteristics of OLEDs
7.2 Lifetime
7.2.1 Storage Lifetime
7.2.2 Driving Lifetime
7.3 Temperature Measurement of OLED Devices
