Index

Academic opportunities for genetics counselors, 474–475
Acceptance of responsibility, psychosocial issues in genetic counseling and, 154–155
Accreditation for genetic counseling training programs, 21
Accuracy issues:
  ethics in genetics counseling, informed consent and, 370
  genetic testing, 287
  genetic test results, 122–123
  medical genetics evaluation, 256
  pedigree construction and, 54
  research design and, 451–452
Action decisions:
  decision-making models and, 226
  ethics of genetic counseling and, 380
Action stage of health behavior, 198
Active listening, in interviewing, 80–83
Adolescents:
  decision-making models and, 238, 382–383
  genetic counseling guidelines for, 564–565
Adoption data, pedigree construction and, 52
Adult learners:
  genetics education programs for, 496–497
  patient education practices and, 179–181
Adult-onset diseases, genetic counseling and, 15–16
Adult patients, medical genetics examinations, 275
Advanced counseling students, evaluation of, 422
Advanced education and training for genetics counselors, 472–473
Advocacy groups:
  discussion during interviewing of, 89–90
  importance of, 104
  international resources, 104–106
  online directories, 104–105
  resources for patients, 104–105
  support group literature, evaluation of, 105–106
Affective issues:
  assessment during interviewing of, 89–90
  ethics of genetic counseling and, 10
American Board of Genetic Counseling (ABGC):
- ABGC certification, 23–24, 467
- accreditation of genetic counseling training programs, 21
- history of, 21
- information about, 477
- practice-based competencies, 21, 25–30, 373, 402, 469
- publications/resources, 477
- student supervision guidelines, 402

American Board of Medical Genetics (ABMG), 21, 23, 254
- information about, 478

American College of Medical Genetics (ACMG):
- billing and reimbursement guidelines, 96
- clinical medical geneticists standards and training, 254
- conferences and programs by, 471–472
- genetic testing quality control and, 292
- information about, 478–479
- publications/resources, 479

American Society of Human Genetics (ASHG):
- conferences and programs by, 471–472
- genetic counseling definition of, 5
- information about, 479
- publications/resources, 479

Americans with Disabilities Act of 1990, 392
- legal issues in genetics counseling and, 381–382

Amniocentesis, reproductive genetics case study, 567–575

Amsterdam criteria, hereditary nonpolyposis colorectal cancer, 579–580

Analogies to explain genetic concepts, examples, 520–522

Analysis level, of counseling student, 405

Analytical validity, genetic testing, 286–287

Andrological learning model, patient education practices and, 180–181

Anger, psychosocial issues in genetic counseling and, 151

Anxiety:
- decision-making and, 226
- risk communication and, 210
- student evaluations and role of, 423, 428

Application level, of counseling student, 405

Array comparative genomic hybridization (CGH), negative results, complexities of, 290

Assessment process:
- during interviewing, 89–90
- psychosocial assessment and session structure, 135–136
- student skills assessment, 416–422
- formal case presentations, 416–418
- formative and summative evaluations, 419–421
- patient surveys, 418–419
- rotation completion evaluations, 421–422

Assisted reproductive technology ( ART ), pedigree construction and, 46–47

Association, medical genetics examination and, 271–272

At-risk family members, risk communication and concern for, 219–224

Attending behavior, in interviewing, 80–83

Audiovisual materials, patient education using, 194–195

Authoritarianism, multicultural genetics counseling and culture of, 340–341

Authorization by patient, ethics of genetic counseling and informed consent, 370

Autonomy:
- career development for genetic counselors and role of, 539
- principle-based ethics and genetics counseling, 368–369
- working alliances and patient autonomy, 139–140

Availability heuristic, patient education and communication of risk, 186–187

Bad news:
- as barrier to patient education, 188–189
- psychosocial counseling and dispensing of, 148–151

Balanced chromosome rearrangements, risk assessment and, 110–112

Barriers to risk communication, family barriers, 220–224

Battery, malpractice in genetic counseling and, 384

Bayesian analysis, risk assessment using, 108–110
Behavioral intention:
- education in assessment of, 487–488
- moral behavior principles, 364
- multicultural genetics counseling and, 333–334
- theory of reasoned action and, 199
Belief systems about disease and disorders,
- multicultural genetics counseling and, 349–350
Beneficence, principle-based ethics and
- genetics counseling, 367–368
Billing issues:
- billing codes used, 322–323
- clinic visits, 96
- genetic testing fees, 119–120
- medical records documentation, 322–323
- resources, 96
Biochemical testing:
- defined, 283
- medical genetics evaluation and, 277
Biological birth, multicultural genetics
- counseling and attitudes concerning, 345–346
Biomedical disease model, multicultural
- genetics counseling and, 332–333, 349–351
Birth, multicultural genetics counseling and
- attitudes concerning, 346–348
Blindness, as learning barrier, 191–192
Blind spots, professional awareness of, 402–403
Bloom’s taxonomy, for student skill
- assessment, 405–407
Body proportion measurements, medical
- genetics evaluation, 269–270
Boundaries, in working alliances, 138–139
Breach of duty, malpractice in genetic
- counseling and, 384–388
Brochures/pamphlets, patient education
- using, 195
- evaluation of, 106
Canadian Association of Genetic Counsellors
- (CAGC)
- certification, 467
- information about 479
Cancer genetics:
- case study in, 575–591
- emerging specialization in, 527–528
Career development for genetics counselors,
- 530–551
- advanced degree program, 472–473, 542
- consultants to healthcare payers/providers, 546
- evolution of profession, 524–525
- expansion of profession, 525–526
- exploration phase, 540–541
- implementation phase, 542–544
- interviewing techniques for job seekers, 543–544
- job postings, 541
- knowledge acquisition and, 531–537
- learning and training opportunities, 535
- networking guidelines, 535–537
- nontraditional pathways for, 530–531
- overview, 523–524
- policy-making and administrative jobs, 545–546
- primary care positions, 545
- private practice opportunities, 546
- professional development and, 541–542
- public health opportunities, 547
- research opportunities, 546
- resources for, 540–542
- resume and CV preparation, 542–543
- self-assessment phase, 537–540
- skills development, 528–530
- specialization trends in, 526–531
- virtual counseling, 547
- visioning techniques, 544–545
Care ethics:
- genetic counseling and, 366–367
- NSGC Code of Ethics and, 372–373
Carriers:
- Bayesian analysis of risk assessment in, 108–110
Case conferences:
- medical genetics evaluation and, 279–280
- student skills assessment, 416–418
Case preparation and management:
- billing issues, and resources, 96
- cancer genetics case study, 575–591
- clinic visit:
  - Interpreters, working with, 127–128
  - management of, 95, 125–128
  - planning for, 99
  - time constraints, 127
- components of, 94–95
Case preparation and management (Continued)
Counseling aids, use, development and benefits of, 112–113
documentation, 129
examples of, 553–591
family history, how to obtain, 37–69, 99–100
family members, referrals to genetics clinics of, 128–129
GeneTests, resource for case preparation, 102
genetic conditions, information to obtain for cases, 97
resources for information about, 102–104
patient resources, 104–106
genetics information resources for, 102–103
genetic testing, 113–125
results, 122–125
communication of results, 123–125
discrimination resources, 121
implications for insurance coverage, 120–121
DNA banking, 121–122
fees and insurance coverage issues, 119–121
request to insurer for test coverage, letter content, 121
information needed to order a genetic test, 116–117
informed consent, 114
overview of steps involved, 113
paperwork requirements, 119
prenatal samples, special considerations, 118
sample shipment, 118
international samples, 118
information needed for case preparation, 97–99
questions to guide case preparation, 97–98
information needed to order genetic testing, 116–117
initial intake process, 95–96
literature searches, 103
medical records, request and review of, 100–101
psychosocial information and issues, 101–102
Online Mendelian Inheritance in Man, database of genetic conditions, 102–103
overview, 93–95
pediatrics case study, 554–567
photographs, requests for, 100
practice guidelines, 103–104, 300–302
reopening of older cases, 129
reproductive genetics case study, 567–575
risk assessment, 106–112
Bayesian analysis, 108–110
Chromosome rearrangements, 110–112
cytogenetic databases, 111
general risk figures and information to provide, 111
patient resources, 111
pedigree evaluation, 107–108
tips, 108
presentation of assessment, 112
tips, 112
risk figures to provide, 107
steps and variables to consider, 106–107
referrals, 128
genetics clinics, 128
specialists, 128
support/advocacy groups and patient resources, 104–106
basic genetics concepts, 105
evaluation of resources, 106
international resources, 104–105
Case studies in genetic counseling, 553–591
genetic testing cases, 302–307
Certification of genetic counselors: guidelines for, 23, 467
legal issues surrounding, 386–388
programs for, 23–24, 373
CGC, Certified Genetic Counselor, 467
Chart notes, definition of, 316–317
Chief complaint, medical genetics evaluation and identification of, 260–261
Children: decision-making models and, 238
legal issues surrounding, 382–383
at interviews, 72–73
presymptomatic testing in, ethical and legal issues, 389–391
risk communication and concern for, 219–224
Chromosome analysis:
defined, 285
educational materials on, 516
Chromosome rearrangements, risk assessment and, 110–112
Civil Rights laws, legal issues in genetics counseling and, 381–382
Clarity of instruction, patient education and, 179
Client-centered theory:
patient autonomy and, 139–140
psychosocial issues in genetic counseling and, 156
Client demographics:
genetic counseling and, 6
risk communication and, 213
Client education, ethics of genetic counseling and, 9
Clinical laboratories, research laboratory-clinical laboratory continuum, 295–296
Clinical Laboratory Improvement Amendments (CLIA): genetic testing quality control and, 292–295
regulations of, 296–297
Clinical medical geneticists:
genetics counseling and, 17
medical genetics evaluation by:
role of, 254–255
special considerations for, 267
tools and resources for, 278–279
training requirements, 254
professional societies for, 477–481
specialty areas, development of, 526–531
Clinical sensitivity, genetic testing, 287–288
Clinical specificity, genetic testing, 287–288
Clinical supervision. See also Supervision agreements for, 429–430
genetic counselors’ responsibility for, 403–404
Clinical utility, genetic testing, 288
test variable definitions and calculations, 288
Clinical validity, genetic testing, 287–288
Clinic visits:
case preparation and management:
Interpreters, working with, 127–128
management of, 125–128
planning for, 99
time constraints, 127
medical documentation of, 315–316
reason for visit criteria for, 260–261
referral of family members for, 128–129
Closed-ended questions, during interviewing, 83–85
Cognitive communication level, multicultural genetics counseling and, 353–354
Cognitive impairment, as barrier to patient education, 191
Collaboration, Education and Test Translation (CETT) Program, 296
Collectivism, multicultural genetics counseling and culture of, 338–340
Colored Eco-Genetic Relationship Map (CEGRM), risk communication and, 221–224
Common sense model of patient education, 199–200
Communication guidelines:
for genetic test results, 123–125
interviewing techniques and, 80–83
legal issues surrounding genetic counseling and, 387
multicultural genetics counseling and, 351–357
context of communication, 354–355
identification with client, 356–357
levels of communication, 353–354
modes of communication and meaning of words, 355–356
patient education and, 177–178
psychosocial issues in genetic counseling and, 133–135
research presentations, 455–456
risk communication, 207–224
aids for, 235–238
children and adolescents, 238
client-based issues in, 213, 216–219
cultural tailoring for, 238–242
Communication guidelines (Continued)
in family systems, 219–224
fear, anxiety, and uncertainty surrounding, 210
future research issues, 240, 243
internal and external factors in, 208–212
internalization and retention of information, 209

overestimation of risk, 209
overview, 207–208
perceptions of risk, 209–212
practical aspects, 216–217
preference for risk information, 210
psychosocial aspects, 217–218
social aspects, 218
spiritual aspects, 218–219
risk assessment presentation, 112
risk figures to provide, 107
skills development for genetic counselors, 26–27, 529
Competency:
ethics in genetics counseling, informed consent and, 370
in multicultural genetics counseling, development of, 333
Comprehension level:
of counseling student, 405
of patient:
bad news, presentation of, 188–189
cognitive impairment and, 191
ethics in genetics counseling and, 370
Conceptualization skills, student assessment for, 405
Conferences:
professional development for counselors and, 470–472
technology assessment at, 299–300
Confidentiality:
cancer genetics case study, 586–591
ethics in genetics counseling and, 11, 369
family history 99
legal issues in, 387
in medical records, 318–322
pedigree construction and, 56–57
student evaluations and, 426–427
working alliance and role of, 138–139
Confrontation coping strategy, psychosocial issues in genetic counseling and, 154–155
Congruence, genuineness in interviews and, 74–75
Connective tissue disorders, medical genetics examination, 275
Consanguinity:
affinal kin, multicultural genetics counseling and, 349–350
in pediatric genetics case study, 558–561
pedigree construction and, 50–51
Consequence-based utilitarianism, ethics in genetics counseling and, 366
Consultant referrals, medical genetics evaluation and, 279–280
Consultation, student supervision using, 408–409
Consumer information processing theory, patient education and, 198
Contemplation stage of health behavior, 198
Context-based communication, multicultural genetics counseling and, 354–355
Continuing education for genetics counselors, 470–473
conferences, 470–472
continuing education units (CEUs) and ways to obtain, 470–471
examples of, 488–490
lifelong learning practices, 469, 535
Continuing responses, student supervision using, 413–416
Contracting, interview working agreements as, 78–80
Controlling strategy, psychosocial issues in genetic counseling and, 154–155
Coping mechanisms of counselees:
psychosocial issues in genetic counseling and, 154–155
transactional model of stress and coping, 199–200
Core values:
development in genetic counselors of, 530
multicultural genetics counseling and, 337–344
egalitarian vs. hierarchical thinking/authoritarianism, 340–341
gender roles, 343–344
individualism vs. collectivism, 338–342
INDEX

time/task orientation vs. event/person orientation, 338–343
Cost issues. See also Billing issues
genetic testing fees and insurance coverage, 119–120
interview working agreements and discussion of, 80
Counseling aids, use, development and benefits of, 112–113, 193–194
student supervision using, 409
Countertransference, disruption of working alliances and, 144–146
Co-workers, counselor job interviews with, 544
Credentialing programs for genetic counselors, 23–25, 467
CRISCOM Working Group, risk communication guidelines, 216–217
Crisis intervention, decision-making models and, 228–243
Critical incident response, multicultural genetics counseling, case studies in, 358–359
Critical thinking skills, for genetic counselors, 27–28, 529
Cross-cousins/parallel-cousins, multicultural genetics counseling and, 332, 347–349
Cultural issues:
 barriers to health and genetics education and, 190–191
decision-making models and, 238–243
interview working agreements and, 78–80
male psychosocial issues and, 164–166
multicultural genetics counseling:
 American values and, 336–337
 beliefs about disease and disorders, 349–351
 challenges of, 332–333
 communication issues, 351–357
 competency demands, 333
 core values for, 337–344
 critical incident responses, case studies, 358–359
 cultural diversity and, 333–334
 overview, 331–332
 pregnancy, birth, and family issues, 344–348
 religious issues, 335–336
 in pediatric genetics case study, 565
 psychosocial issues in genetic counseling and, 133–135
 student counseling assessment and, 425
 billing codes, 322–323
 Curricula, for genetics counseling, 19–20
 Curriculum vitae preparation guidelines, 542–543
 Cutaneous examination, medical genetics evaluation, 268–269
 Cytogenetics studies:
 databases, 111
 genetic test results, 123
 medical genetics evaluation and, 277–278
 patient resources, 111
 risk assessment and, 110–112
 testing procedures, defined, 285
 Data collection and analysis, research design and, 451–452, 454
 Deafness, as learning barrier, 191–192
 Decision aids, decision-making models and, 236–238
 Decisional conflict scale (DSC), 227–228
 Decision-making:
 difficult decisions and, 234
 ethics of genetic counseling and, 371
 genetic counseling model of, 4
 by minors, legal issues surrounding, 382–383
 in reproductive genetics case study, 567–575
 risk communication and, 224–243
 aids for, 235–238
 anxiety and worry, 226
 children and adolescents, 238
 cultural tailoring for, 238–242
decision scales, 227–228
difficulties and barriers to, 234
 family systems and, 226–227
 future research issues, 240, 243
 internal and external factors, 225
 medical management issues, 226
 models of, 228–233
 nondirectiveness and, 234–235
 practical aspects of, 233–234
 reflection, 234
 social relationships and, 227
 structured scenarios, 234
Decision scales, 227–228
Decision stage of health behavior, 198
Deformation, medical genetics examination and, 272
Denial, psychosocial issues in genetic counseling and, 151
De novo chromosome rearrangements, risk assessment and, 110–112
Dependent nuclear family concept, multicultural genetics counseling and, 346–348
Dermatoglyphics, medical genetics examination, 271
Descriptive terminology, multicultural genetics counseling and family relationships, 347–348
Developmental delays, medical genetics examination, 274–275
Developmental differences in student counselors, evaluation of, 422–423
Diagnostic criteria and studies: case preparation and management, 97–99
information gathering involving, 97–99
Genetic counseling and, 12
Medical genetics evaluation and, 277–278
Patient education concerning, 184

INDEX

Psychosocial issues:
- assessment skills, in genetic counselors, 529–530
- cancer genetics case study, 586–591
- case preparation and management, 101–102
- counseling guidelines:
  - assessment and session structure, 135–136
  - confidentiality and boundaries, 138–139
  - counselees’ coping styles, 154–155
  - difficult issues and giving bad news, 148–151
  - empathic break, 147–148
  - empathy and, 141–144
  - family system theories, 160–165
  - listening skills, 140
  - male psychosocial issues, 165–166
  - overview, 133–135
  - patient autonomy, 139–140
  - patient’s history, 136–137
  - projection and projective identification, 146–147
  - reactions and psychologically challenging experiences, 151–154
  - self-awareness and self-attunement, 138
  - self in relation theory, 158–160
  - self-psychology theory, 157–158
  - supervision guidelines, 166–167
  - theoretical background to, 155–165
  - transference and countertransference, 144–146
  - working alliance:
    - disruptions in, 144–148
    - dynamic psychological engagement in, 137–144
- ethics of genetic counseling and, 10–11
- family history and, 63–64
- medical genetics evaluation and, 256–257
- in pediatric genetics case study, 564–567
- risk communication and, 217–218
- student evaluations, unconscious dynamics, 428–429
- Psychotherapeutic model of genetic counseling, 4–5
- Public health, career development for genetics counselors in, 547

Qualitative research, basic principles, 439–441

Quality control and assurance:
- ethics of genetic counseling and role of, 371
- genetic testing, 292–295
- errors and proficiency testing, 294–295
- international regulations and standards, 293
- laboratory oversight, 292–293
- oversight and supervision of testing, 293–294
- personnel qualifications and professionalization, 293

Quantitative research, basic principles, 439–441

Questioning techniques:
- advocacy group evaluation, 106
- case preparation and management, information gathering, 97–99
- during interviewing, 83–85
- interview working agreements and question order, 78–80
- psychosocial issues in genetic counseling and, 153–154
- research question design, 442–443

Random probability and sampling, research design and, 450–451

Reason for visit criteria, medical history and, 260–262

Recall mechanisms, patient education and, 190

Recontact with clients:
- ethical and legal duties regarding, 395–396
- long-term followup and, 129
- in pediatrics case study, 563–564
- “Red flags” in family history, 59

Redirection, as interviewing technique, 86–87

Reduced penetrance, pedigree analysis and, 60–61

Reflection:
- decision-making models and, 235
- empathy and, 75–76
- as interviewing technique, 86

Registration of genetic counselors, 24
Regulatory issues:
  legal issues in genetics counseling and, 381–382
  research and laboratory genetics testing, 296–297
Rehabilitation Act of 1973, legal issues in genetics counseling and, 381–382
Reimbursement issues:
  ACMG guidelines, 96
  billing codes used and medical record documentation, 322–323
  SACGHS report, 96
Relational communication level, multicultural genetics counseling and, 353–354
Relationship line, in pedigree construction, 43–46
Relevant medical history criteria, medical genetics evaluation and, 262–264
Reliability criteria, research design and, 451–452
Religious beliefs:
  interviewing techniques and role of, 89–90
  multicultural genetics counseling and, 335–336
  in pediatric genetics case study, 559–569
  risk communication and, 218–219
Rephrasing technique, during interviewing, 85–86
Reproductive genetics:
  case study in, 567–575
  risk assessment guidelines:
    ethical and legal issues in, 388–389
    genetic counseling and, 6, 14
Research in genetic counseling:
  attitudinal and motivational issues, 458–459
  career opportunities in, 532–533, 546
  data collection and analysis, 454
  definition of research, 438
  design process for, 441–454
    hypothesis development, 446–448
    literature review, 444–445

  multicultural genetics counseling, 333–334
  in risk communication, 218
  decision-making models and, 227
Social learning theory, patient education and, 198–199
Social support, psychosocial issues in genetic counseling and, 154–155
Specialists in genetics:
  described, 16–18, 254–255
  expanding role for, 525–528
  medical genetics evaluation and use of, 279–280
  patient referrals to, 128
Specificity, genetic testing, 287–288
  technology improvements for, case study of, 304–306
Spiritual issues:
  interviewing techniques and role of, 89–90
  risk communication and, 218–219
Stages of change model, for patient education, 198
Standards for science education, genetics education and, 491–494
STAR (situation, task, action, results) interview technique, 543
Stickler syndrome, pedigree construction for, 58–59
Strategic approach, family system theory, 162
Stress and coping, transactional model of, 199–200
Structural approach, family system theory, 162
Structured scenarios, decision-making models and, 234
Students:
  genetics education programs for, 494–499
  professional identity for, 463–465
  supervision:
    agreements for, 429–430
    anxiety levels, 422, 428
    assessment methods, 416–422
formal case presentations, 416–418
formative and summative evaluations, 419–421
patient surveys, 418–419
rotation completion evaluations, 421–422
confidentiality issues, 426–427
cultural issues, 425
definitions, 402–403
developmental levels, 422
discussion topics, 407
ethical and legal issues, 425–426
genetic counselors’ responsibilities as clinical supervisors, 403–404
methods, 413–416
motivation, 423
multiple role conflicts, 426
novice supervisors, 425
novice vs. advanced supervisees, 422
overview, 401–402
personal responsibility, 423
preparation challenges, 428
professional self-concept crystallization, 423, 463–465
sample agreement, 430–432
student responsibilities, 411–413
supervision goals, 404–407
clarity of, 423–424
supervision needs, 423
supervisor/patient dependence, 422
supervisor responsibilities, 408–411
unconscious dynamics, 428–429
Subjective perspective, scientific research and, 438–439
Subjective risk estimate, patient education and communication of, 184
Summative evaluations, student assessment using, 419–421
Supervision process:
  hiring interviews and, 544
  psychosocial counseling and, 166–167
  student supervision: See also Clinical Supervision
    agreements for, 429–430
    example of, 430–432
    anxiety levels, 422, 428
    assessment methods, 416–422
    formal case presentations, 416–418
formative and summative evaluations, 419–421
patient surveys, 418–419
confidentiality issues, 426–427
cultural issues, 425
definitions, 402–403
developmental levels, 422
discussion topics, 407
ethical and legal issues, 425–426
evaluations at completion of rotation, 421–422
feedback, receiving, 412–413

gene counselor's responsibilities as clinical supervisors, 403–404
goals of, 404
models to establish goals, 404–407
methods, 413–416
motivation, 423
multiple role conflicts, 426
novice supervisors, 425
novice vs. advanced supervisees, 222–224, 422
overview, 401–402
personal responsibility, 423
preparation challenges, 428
problematic performance, 427–428
professional self-concept crystallization, 423
roles of supervisor, 408–409
scenarios illustrating roles, 409–411
sample agreement, 430–432
skill development, 404–407
strategies for effective supervision, 413
student responsibilities, 411–413
students failure to focus in supervision, reasons for, 417
supervision goals, 404–407
clarity of, 423–424
supervision needs, 423
supervisor/patient dependence, 422
supervisor responsibilities, 408–411
unconscious dynamics, 428–429
Support/advocacy groups. See Advocacy groups discussion during interviewing of, 89–90
medical genetics evaluation and, 256–257
patient education for facilitation of, 187–188
Syndrome, medical genetics examination and, 271–272
Synthesis level, of counseling student, 405
Teachable moment, patient education and, 182
Teaching duties. See also Education by genetic counselors of counseling supervisor, 408
Technology:
education about, 501
educational resources on, 513

genetics testing assessment conferences, 299–300
virtual counseling and, 547
Telephone conferencing:
communication of diagnosis, guidelines for, 124–125
interviewing with, 72
Termination of counseling relationship, legal issues in, 388
Theory of reasoned action, patient education and, 199
Third-party payers:
duty to warn principles regarding, 392–394
medical records review by, 324
Three-generation pedigree, 49–50
Time constraints:
for clinic visits, 127–128
interview working agreements and, 79–80
pedigree construction and, 52–53
Time/task orientation, multicultural genetics counseling and culture of, 342–344
Tort liability, genetic counseling and, 384–388
Training programs for genetic counselors. See also Education by genetic counselors accreditation of, 21
clinical medical geneticists, 254
examples of, 488–490
for genetics counseling, 19–20
lifelong learning practices, 469–473
advanced education and training, 472–473
