Index

Note:
Page numbers in *italics* refer to figures; those in **bold** refer to tables.

**Abbreviations used in the index:**
BMI – body mass index
FPG – fasting plasma glucose
OGTT – oral glucose tolerance test
T2D – type 2 diabetes

abdominal obesity 99–100
Active in Diabetes Prevention 91
acute coronary syndrome (ACS) 26
adherence (in programs) 63–64
Life! Taking Action on Diabetes program 61–62
Prevent Diabetes Live Life Well program 54–55
adipose tissue 165
age as risk factor 15
alcohol as protective factor 18
American Diabetes Association (ADA) risk score 22, 23
anti-inflammatory drugs 73–74
antidepressant medication 74–75
antidiabetic agents 104, 106–107, 108–109
see also metformin
Arab population, in Israel 206
Asian populations
Asian Indians
prevalence (diabetes) 2, 96, 97, 98
risk of diabetes 95–96
diabetes preventive strategies 103–109, 106–107
diet and exercise 104, 105
health education 108
lifestyle and antidiabetic drugs 104, 106–107, 108–109
risk factors for T2D 96, 99, 102–103, 103
fetal undernutrition and low birth weight 101–102

food habits and diet 100–101
genetic factors 102, 102
obesity, and BMI 99–100, 100
physical activity 101
scoring system adaptation 24, 88–89
South Asians (migrant) 95
prevalence (diabetes) 96, 97, 98
atherosclerotic complications 74
attitudes, to diabetes and health risks 76
attrition in programs see retention (prevention programs)
