Preface xvii

Part I  Fundamentals of Mixing  1

1  Mixing Theory  3
    Chris D. Rielly
    1.1  Introduction  3
    1.2  Describing Mixtures  5
    1.3  Scale of Scrutiny  6
    1.4  Quantifying Mixedness for Coarse and Fine-Grained Mixtures  8
        1.4.1  Coarse and Fine-Grained Mixtures  8
        1.4.2  Scale and Intensity of Segregation  9
    1.5  Determining the End-Point of Mixing: Comparison of Mixing Indices  15
    1.6  Continuous Flow Mixers  19
        1.6.1  Idealized Mixing Patterns  19
        1.6.2  Residence Time Distributions  21
        1.6.3  Back-Mixing and Filtering of Disturbances Using a CSTR  23
    References  24

2  Turbulent Mixing Fundamentals  27
    Suzanne M. Kresta
    2.1  Introduction  27
    2.2  The Velocity Field and Turbulence  28
    2.3  Circulation and Macro-Mixing  29
    2.4  Fully Turbulent Limits and the Scaling of Turbulence  32
    2.5  The Spectrum of Turbulent Length Scales, Injection of a Scalar
         (Either Reagent or Additive) and the Macro-, Meso- and
         Micro-Scales of Mixing  34
    2.6  Turbulence and Mixing of Solids, Liquids, and Gases  37
    2.7  Specifying Mixing Requirements for a Process  38
    2.8  Conclusions  39
    Notation  39
    Roman Characters  39
    Greek Characters  40
    References  40
3 Laminar Mixing Fundamentals
P.J. Cullen and N.N. Misra

3.1 Laminar Flows
3.2 Mixing in Laminar Flows
  3.2.1 Chaos and Laminar Chaotic Mixing
  3.2.2 Granular Chaotic Mixing
3.3 Recent Advances
References

4 Sampling and Determination of Adequacy of Mixing
Rodolfo J. Romañach

4.1 Introduction, Process Understanding, and Regulations
4.2 Theory of Sampling
4.3 Sampling of Pharmaceutical Powder Blends
4.4 Stratified Sampling Approach
4.5 Testing
4.6 Process Knowledge/Process Analytical Technology
4.7 Real Time Spectroscopic Monitoring of Powder Blending
4.8 Looking Forward, Recommendations
4.9 Conclusion
4.10 Acknowledgments
References

Part II Applications

5 Particles and Blending
Reuben D. Domike and Charles L. Cooney

5.1 Introduction
5.2 Particle Geometry
  5.2.1 Particle Size and Size Distribution
  5.2.2 Particle Shape and Shape Distribution
5.3 Particle Interactions
  5.3.1 van der Waals Forces
  5.3.2 Electrostatic Forces
  5.3.3 Adsorbed Liquid Layers and Liquid Bridges
  5.3.4 Solid Bridges
  5.3.5 Use of AFM to Measure Interparticle Forces
  5.3.6 Interparticle Friction
5.4 Empirical Investigations of Particles and Blending
  5.4.1 Blending of Powders
  5.4.2 Impact of Particle Geometry on Blending
  5.4.3 Impact of Interparticle Forces on Blending
  5.4.4 Impact of Blender Conditions on Blending
References
Contents

5.5 Simulation Techniques 95
  5.5.1 Full Physics Models Using Discrete Element Modeling 96
  5.5.2 Continuum Models 97
  5.5.3 Cellular Automata 98
References 98

6 Continuous Powder Mixing 101
Juan G. Osorio, Aditya U. Vanarase, Rodolfo J. Romañach, and Fernando J. Muzzio

6.1 Introduction 101
6.2 Overview 102
6.3 Theoretical Characterization 107
  6.3.1 Residence Time Distribution (RTD) Modeling 107
  6.3.2 Variance Reduction Ratio 108
6.4 Experimental Characterization 108
  6.4.1 Hold-Up 109
  6.4.2 Residence Time Distribution (RTD) Measurements 109
  6.4.3 Mean Strain 110
6.5 Continuous Mixing Efficiency 110
  6.5.1 Variance Reduction Ratio 110
  6.5.2 Blend Homogeneity 111
6.6 Effects of Process Parameters on Mixing Behavior and Performance 112
  6.6.1 Hold-Up 113
  6.6.2 RTD Measurements 113
6.7 Mixing Performance 118
  6.7.1 Modeling 120
  6.7.2 PAT, QbD, and Control 122
6.8 Conclusions and Continuing Efforts 124
References 125

7 Dispersion of Fine Powders in Liquids: Particle Incorporation and Size Reduction 129
Gül N. Özcın-Taşkin

7.1 Particle Incorporation into Liquids 129
  7.1.1 Wetting 130
  7.1.2 Stirred Tanks for Particle Incorporation 132
  7.1.3 In-Line Devices Used for Particle Incorporation 140
7.2 Break Up of Fine Powder Clusters in Liquids 143
  7.2.1 Mechanisms of Break Up 146
  7.2.2 Process Devices for Deagglomeration\Size Reduction of Agglomerates 147
References 150
8 Wet Granulation and Mixing
Karen P. Hapgood and Rachel M. Smith

8.1 Introduction 153
8.2 Nucleation 154
  8.2.1 Drop Penetration Time 156
  8.2.2 Dimensionless Spray Flux 158
  8.2.3 Nucleation Regime Map 160
8.3 Consolidation and Growth 162
  8.3.1 Granule Consolidation 162
  8.3.2 Granule Growth Behaviour 164
  8.3.3 Granule Growth Regime Map 165
8.4 Breakage 167
  8.4.1 Single Granule Strength and Deformation 167
  8.4.2 In-Granulator Breakage Studies 170
  8.4.3 Aiding Controlled Granulation via Breakage 172
8.5 Endpoint Control 174
  8.5.1 Granulation Time 175
  8.5.2 Impeller Power Consumption 176
  8.5.3 Online Measurement of Granule Size 176
  8.5.4 NIR and Other Spectral Methods 177
References 178

9 Emulsions
Andrzej W. Pacek

9.1 Introduction 183
9.2 Properties of Emulsions 185
  9.2.1 Morphology 185
  9.2.2 Volumetric Composition 185
  9.2.3 Drop Size Distributions and Average Drop Sizes 186
  9.2.4 Rheology 191
9.3 Emulsion Stability and Surface Forces 195
  9.3.1 Surface Forces 195
  9.3.2 Emulsion Stability 199
9.4 Principles of Emulsion Formation 203
  9.4.1 Low Energy Emulsification 204
  9.4.2 High Energy Emulsification 205
9.5 Emulsification Equipment 216
  9.5.1 Stirred Vessels 216
  9.5.2 Static Mixers 218
  9.5.3 High Shear Mixers 219
  9.5.4 High-Pressure Homogenizers 223
  9.5.5 Ultrasonic Homogenizers 225
9.6 Concluding Remarks 226
10 Mixing of Pharmaceutical Solid-Liquid Suspensions

Mostafa Barigou and Frans L. Muller

10.1 Introduction
10.1.1 Linking Solid-Liquid Processing to Critical Quality Attributes
10.1.2 Material Properties and Composition
10.1.3 Impact of Blending and Homogenization
10.1.4 Impact of Turbulence
10.1.5 Impact of Heat Transfer

10.2 Scale-Up of Operations Involving Solid Suspensions
10.2.1 The Nature of Suspensions
10.2.2 Scale-Up and Scale-Down Rules
10.2.3 Identification of Agitator Duties
10.2.4 Solid-Liquid Unit Operations

10.3 General Principles of Solid-Liquid Suspensions
10.3.1 Rheological Behaviour of the Continuous Phase
10.3.2 Rheology of Suspensions
10.3.3 Terminal Velocity of Particles
10.3.4 Turbulence

10.4 Solids Charging
10.4.1 Charging to Batch Vessels
10.4.2 Charging Difficult Powders

10.5 Solid Suspension
10.5.1 States of Solid Suspension
10.5.2 Prediction of Minimum Speed for Complete Suspension

10.6 Solid Distribution
10.6.1 Agitator Speed
10.6.2 Homogeneity
10.6.3 Geometry
10.6.4 Practical Guidelines

10.7 Blending in Solid-Liquid Systems
10.7.1 Mixing Time
10.7.2 Viscoplastic Slurries Yield Stress and Cavern Formation

10.8 Mass Transfer
10.9 Size Reduction, Deagglomeration and Attrition
10.9.1 Breaking Particles through Turbulent Forces
10.9.2 Breaking Particles through Impact

Part III  Equipment

11  Powder Blending Equipment  289

David S. Dickey

11.1  Introduction  289
11.2  Blending Mechanisms  290
11.3  Blend Time  290
11.4  Fill Level  291
11.5  Segregation  291
11.6  Powder Processing Difficulties  292
11.7  Blender Classification  292
  11.7.1  Tumble Blenders  293
  11.7.2  Rotating Element Blenders  298
  11.7.3  Granulators  303
  11.7.4  Other Blenders – Mullers and Custom Blenders  304
11.8  Continuous Blenders  305
11.9  Blender Selection  306
11.10  Equipment Specifications  307
  11.10.1  Materials of Construction  309
  11.10.2  Electrical Classification  309
  11.10.3  Drives and Seals  309
References  310

12  Fluid Mixing Equipment Design  311

David S. Dickey

12.1  Introduction  311
12.2  Equipment Description  312
  12.2.1  Laboratory Mixers  312
  12.2.2  Development Mixers  313
  12.2.3  Portable Mixers  313
  12.2.4  Top-Entering Mixers  315
  12.2.5  High-Shear Dispersers  318
  12.2.6  High Viscosity Mixers  319
  12.2.7  Multi-Shaft Mixers  319
  12.2.8  Bottom-Entering Mixers  320
  12.2.9  Glass-Lined Mixers and Vessels  321
  12.2.10  Side-Entering Mixers  322
  12.2.11  Vessel Geometry  322
  12.2.12  Baffles  323
12.3  Measurements  323
  12.3.1  Power  324
  12.3.2  Torque  326
  12.3.3  Tip Speed  327
  12.3.4  Blend Time  327
12.4  Mixing Classifications  328
  12.4.1  Liquid Mixing  328
12.4.2 Solids Suspension 330
12.4.3 Gas Dispersion 332
12.4.4 Viscous Mixing 333

12.5 Mechanical Design 334
12.5.1 Shaft Design 334
12.5.2 Shaft Seals 335
12.5.3 Materials of Construction 336
12.5.4 Surface Finish 337
12.5.5 Motors 338
12.5.6 Drives 339

12.6 Static Mixers 339
12.6.1 Twisted Element 339
12.6.2 Structured Element 339
12.6.3 Basic Design 340

12.7 Challenges and Troubleshooting 341
12.7.1 Careful Observations 341
12.7.2 Process Problems 341

Nomenclature 342
Greek 343
References 343

13 Scale-Up 345
David S. Dickey

13.1 Introduction 345

13.2 Similarity and Scale-Up Concepts 346
13.2.1 Dimensional Analysis 346
13.2.2 Similarity 347
13.2.3 Applied Scale-Up 349

13.3 Testing Methods 350

13.4 Observation and Measurement 352

13.5 Scale-Up Methods 354
13.5.1 Scale-Up with Geometric Similarity 354
13.5.2 Example of Geometric Similarity Scale-Up 358
13.5.3 Scale-Up Without Geometric Similarity 359
13.5.4 Example of Non-Geometric Scale-Up 361
13.5.5 Scale-Up for Powder Mixing 364

13.6 Summary 367
Nomenclature 367
Greek 368
References 368

14 Equipment Qualification, Process and Cleaning Validation 369
Ian Jones and Chris Smalley

14.1 Introduction 369

14.2 Blending Equipment Commissioning and Qualification 370
14.2.1 Outline of the Verification Approach 370
14.2.2 Requirements Phase 371
14.2.3 Specifications and Design Review Phase 373
14.2.4 Verification Phase 375

14.3 Blending and Mixing Validation 380
  14.3.1 Why do You Need to Validate Pharmaceutical Blends/Mixes? 382
  14.3.2 When do You Need to Validate Blending/Mixing? 384
  14.3.3 Components of Blending/Mixing Validation 385
  14.3.4 What to Validate 386

14.4 Blending Cleaning Validation 389
  14.4.1 Cleaning Development Studies 389
  14.4.2 Cleaning Validation 395

14.5 Conclusion 398
14.6 Acknowledgements 399
References 399

Part IV Optimization and Control 401

15 Process Analytical Technology for Blending 403
Nicolas Abatzoglou

15.1 Introduction 403
  15.1.1 The Role of PAT in Pharmaceutical Manufacturing:
       Is PAT Really New? 404
  15.1.2 Why PAT is Feasible 405
  15.1.3 Where PAT can be Applied in Pharmaceutical Manufacturing 406
  15.1.4 The Regulatory Framework 406

15.2 Chemometrics and Data Management 408
  15.2.1 PAT Data Management and Interpretation 409

15.3 Near-Infrared Spectroscopy (NIRS) 412
15.4 Raman Spectroscopy (RS) 419
15.5 Image Analysis 422
15.6 LIF Spectroscopy 424
15.7 Effusivity 426
15.8 Other Potential Sensor Technologies 426
15.9 Comments on PAT in Liquid Formulation Mixing 427
References 427

16 Imaging Fluid Mixing 431
Mi Wang

16.1 Introduction 431
16.2 Point Measurement Techniques 433
16.3 Photographic Imaging 435
16.4 Digital Particle Image Velocimetry 439
16.5 Magnetic Resonance Imaging 443
16.6 Positron Emission Particle Tracking Imaging 444
16.7 Electrical Process Tomography 446
References 452
17  Discrete Element Method (DEM) Simulation of Powder Mixing Process  459
   Ali Hassanpour and Mojtaba Ghadiri
   17.1  Introduction to DEM and its Application in Pharmaceutical
         Powder Processing  459
   17.2  DEM Simulation of Powder Mixing  461
   17.3  Validation and Comparison with the Experiments  468
   17.4  Concluding Remarks  474
   References  475
