soil microbial profiles (see soil microbial profiles)

Nicrophorus marginatus, 279
non-lactic acid Firmicutes, 16
nonmetric multidimensional scaling (NMDS), 113–114
non-sporulating Firmicutes, 16
nuclear DNA (nuDNA), 360

objective microbial profiling analysis
methods, 346–347
obligate aerobe, 5, 8

Oceanospirallales, 254
molecular epidemiology, 25
operational taxonomic units (OTUs), 330, 335
opiates, 230–231

Oscheius tipulae, 32
paracetamol glucuronide, 232
Pasteur, 127–128
personal protective equipment (PPE), 80, 96

Planctomycetes, 254
plant litter, 251–252
pneumonia, autopsy microbiology
H1N1 influenza virus, 167–168
Legionella pneumophila, 167
lung samples, 164
nosocomial pneumonia, 164
pathogens, 164, 167
unexpected fungal and mycobacterial infection, 167
postcolonization interval, 287–288

colonization
ambient temperature, 288–289
blow fly activity and oviposition, 288–289
corpse disposal, 289–290
necrophagous beetles, 288–289
necrophagous Coleoptera, 288
development
cold tolerance, 290
controlled substances, 291–292
Diptera and Coleoptera, 290
drug levels, 292
entomotoxicology, 291–292
environmental temperature, 290–291
holometabolous, 290
larval mass density, 291
poikilothermic insects, 290
dispersal
Calliphoridae, 296
circadian rhythm, 295
guanine–cytosine (GC) content, 296
larval insect dispersal, 295
Proteobacteria, Firmicutes, and Bacteroidetes, 297
Proteus–Providencia group, 296
pupation, 295–296
succession
  aerobic protein decomposition, 294
  anaerobic bacteria, 293–294
  autolysis, 293
  body fat, 294
  Calliphoridae, 293
  decomposition stages, 292
  Dermestidae, 295
  Dipteran larvae, 295
  fly species, 292
  insect species, 292
  microbial communities, 292–293
  Muscidae and Fannidae, 293
  Piophilidae, Phoridae, and Sphaeroceridae, 294
  putrefaction by-products, 294
  Sarcophagidae, 293
  skeletal bone decomposition, 295
  soup, 293
  waste gases, 294

postmortem bacterial translocation
  after death
  agonal period, 200
  anaerobic conditions, 202–204
  postmortem interval, 199
  substrates variation, 200–201
  temperature, 201–203
  cadaver microbiota, 192

consequences
  biological risk prevention, 206
  environmental consequences, 206
  infectious agents identification, 204
  organ transplantation, infectious risk, 205
  postmortem interval estimation, 204–205
  postmortem toxicological analysis, 205–206
  definition, 195

in health and disease
  anaerobic and aerobic bacteria, 196
  bacteria through enterocytes, 197, 198
  immune system deficiency, 198
  intestinal microbiota, modification of, 198
  intestinal mucosa alteration, 197
  mechanisms and factors, 197
  pathophysiological mechanisms, 196
  hemorrhagic shock, 198
  inflammatory bowel diseases, 198–199
  intestinal microbiota
    bacterial species and quantification, 193, 194
    Bifidobacterium, 193
    of colon, 195
    commensal, 193
    of duodenum and jejunum, 194
    gram-negative anaerobes, 193
    of ileum, 194–195
    microbial colonization, 193
    molecular markers, 193
    newborn intestinal tract, 193
    of stomach, 194
    \(10^{12}\) to \(10^{14}\) bacteria, 192
  metabolites around corpse, 200

postmortem drug and metabolite degradation
  chemical functional groups, 214–217
  drugs
    alcohol (ethanol), 220–221
    amphetamines, 221–222
    antidepressants, 222–223
    antipsychotics, 223–225
    benzodiazepines, 225–228
    cannabis, 228
    cocaine, 228
    GHB, 229–230
    NPS, 231
    opiates, 230–231
    paracetamol glucuronide, 232
    salbutamol and terbutaline, 232
    sodium fluoride, 232
    trihexyphenidyl, 232
    valproic acid, 233
    zopiclone, 233
  experimental protocols, 218–219
  fungal and mammalian metabolism, 214
  poisons
    cyanide, 233
    ethylene glycol, 233
    formic acid, 234
  xenobiotic metabolic reactions, 214

postmortem interval (PMI) estimation, 59, 69
  environmental factors, 31
invertebrates, 30
microbial succession
human microbial communities, 35–36
mammalian microbial communities, 33–35
soil microbial communities, 32–33
next-generation sequencing methods, 32
prokaryotic and eukaryotic organisms, 32
stages of decomposition, 30–31
taphonomy, 30
time of death, 30
postmortem microbiome, 58
postmortem submersion interval (PMSI), 35
postmortem toxicology, microbial impacts
cadaver decomposition and specimen contamination, 213–214
drug/poison stability, 213
postmortem drug and metabolite degradation
alcohol (ethanol), 220–221
amphetamines, 221–222
antidepressants, 222–223
antipsychotics, 223–225
benzodiazepines, 225–228
cannabis, 228
chemical functional groups, 214–217
cocaine, 228
cyanide, 233
ethylene glycol, 233
experimental protocols, 218–219
formic acid, 234
fungal and mammalian metabolism, 214
\(\gamma\)-hydroxybutyrate, 229–230
NPS, 231
opiates, 230–231
paracetamol glucuronide, 232
salbutamol and terbutaline, 232
sodium fluoride, 232
trihexyphenidyl, 232
valproic acid, 233
xenobiotic metabolic reactions, 214
zopiclone, 233
precautions
chemical preservatives, 214, 218
specimen storage at low temperatures, 218
screening methods, 212
specimen collection and analysis, 212
precolonization interval
death, 284–285
detection, 286
location, 286–287
predation
aquatic ecosystems, 281
bacteria–bacteria predation, 281
cannibalism, 280
flies and bacteria interactions, 281
microbial and necrophagous insect communities, 281
pathogen removal, 282
principle coordinate analysis (PCoA), 113–114
procalcitonin (PCT), 156, 161–163
