Contents

Preface  vii

Part I  Introduction

1  Introduction to Mobile Power Electronics  3
2  Introduction to Wireless Power Transfer (WPT)  19
3  Introduction to Electric Vehicles (EVs)  43

Part II  Theories for Inductive Power Transfer (IPT)

4  Coupled Coil Model  53
5  Gyrator Circuit Model  67
6  Magnetic Mirror Model  99
7  General Unified Dynamic Phasor  129

Part III  Dynamic Charging for Road-Powered Electric Vehicles (RPEVs)

8  Introduction to Dynamic Charging  155
9  History of RPEVs  161
10  Narrow-Width Single-Phase Power Rail (I-type)  209
11  Narrow-Width Dual-Phase Power Rail (I-type)  235
12  Ultra-Slim Power Rail (S-type)  251
13  Controller Design of Dynamic Chargers  273
14  Compensation Circuit  287
Contents

15 Electromagnetic Field (EMF) Cancel 313
16 Large Tolerance Design 337
17 Power Rail Segmentation and Deployment 357

Part IV Static Charging for Pure EVs and Plug-in Hybrid EVs
18 Introduction to Static Charging 379
19 Asymmetric Coils for Large Tolerance EV Chargers 399
20 DQ Coils for Large Tolerance EV Chargers 425
21 Capacitive Power Transfer for EV Chargers Coupler 435
22 Foreign Object Detection 457

Part V Mobile Applications for Phones and Robots
23 Review of Coupled Magnetic Resonance System (CMRS) 473
24 Mid-Range IPT by Dipole Coils 491
25 Long-Range IPT by Dipole Coils 513
26 Free-Space Omnidirectional Mobile Chargers 529
27 Two-Dimensional Omnidirectional IPT for Robots 563

Part VI Special Applications of Wireless Power
28 Magnetic Field Focusing 579
29 Wireless Nuclear Instrumentation 587
30 The Future of Wireless Power 607

Index 613
