Note: page numbers in *italics* denote figures; those in **bold** denote tables.

2D and 3D diagnostic imaging, 102–129
diagnosis complications, 118–122
free-hand implant placement complications, 118–122
implant failure, 109–112, 122–123, 124–126
mandibular symphysis complications, 122–128
nerve perforation complications, 104–109, 110–112
scanographic templates complications, 103–104, 105
sinus augmentation complications, 109–118
surgical technique complications, 118–122
virtual, 3D planning, 97–98
3D implant positioning, treatment planning, 86–87, 88
3D planning, virtual, 97–98

abscess and bone loss from around a dental implant
case report, 639–641, 642, 643
etiology, 640
prevention, 640
treatment, 640–641, 642, 643
abscess and malpositioned implant, 661
abscess formation, guided bone regeneration (GBR)/complications, 374–379
abutment preparation, 310
abutment screw configuration vs. bone loss, implant fractures, 138
acetaminophen, complications, 61
acute implant procedural complications/infections, antibiotic prescribing, 52
ADEs see adverse drug events
adjacent implant restorations, 217, 250–252
see also esthetic complications, adjacent implant restorations
ADRs see adverse drug reactions
adverse drug events (ADEs), 49–51
vs. adverse drug reactions (ADRs), 49–51
reporting, 51
adverse drug reactions (ADRs) vs. adverse drug events (ADEs), 49–51
causes, 49–50
classifying, 50
medical errors, 51
medication errors, **51**
patient errors, **51**
preventable, 50–51
reporting, 51
age complications, etiology, 18–19
allergic reactions, antibiotic prescribing, 56
allergic response, cemented implant restoration/complications, 196
alveolar defects, immediately loaded implant complications, 521–525, 526
alveolar distraction osteogenesis, 383–386
alveolar resorption, immediately loaded implants, 503, 504
alveolar ridge, esthetic complications, malpositioned implants, 220
alveolar segmental osteoperiosteal flaps, 383–395
alveolar distraction osteogenesis, 383–386
alveolar width distraction, 388–390
book bone flap, 392–393, 394
distraction failure or relapse, 393–394
island osteoperiosteal flap (i-flap), 390–391, 392
major orthognathic distraction procedures, 393–394
nasal floor fracture, elevated segment collapse, 387–388
sandwich osteotomy, 386–388
vascular embarrassment of segmental osteotomy, 383–386

alveolar width distraction, devitalized buccal plate, 388–390
Alzheimer’s disease complications etiology, 15–16
prevention, 27
treatment, 37
analgesic prescribing acetaminophen, 61
aspirin allergy/bronchospasm, 61
bleeding, 61
bronchospasm/aspirin allergy, 61
cardiovascular complications, 60
complications, 60–63
drug interactions, **62**, 63
fluid retention, 60–61
indications, 60
liver toxicity, 61
nonsteroidal anti-inflammatory drugs (NSAIDs), 60–61
opioids interactions, **62**, 63
angulation, malpositioning of implants, 511–513, 514, 515
antibiotic–drug interactions, antibiotic prescribing, 58–59
buccal soft tissue recession on a restored central incisor implant, 629–632
esthetic complications, adjacent implant restorations, 322–326, 327–329
esthetic implant complications: soft tissue repairs, 676–680
esthetic zone, implant failure repair, 632–634
esthetic zone, implant failure replacement, 643–646, 695–700
esthetic zone, malpositioned implant, corrective treatment, 653–656, 657, 658
esthetic zone, malpositioned implant, treatment, 658–661, 661–665, 671–672, 673–675
esthetic zone, midbuccal recession, 627–629
implant failure repair, 632–634
implant failure replacement, 692–695
implant failure replacement in the esthetic zone, 643–646, 695–700
long-term retention of a “hopeless” implant, 666–670
malpositioned implant in the esthetic zone, corrective treatment, 653–656, 657, 658
malpositioned implant in the esthetic zone, treatment, 658–661, 661–665, 671–672, 673–675
malpositioned implant in the esthetic zone, treatment and replacement, 646–651, 652, 653
midbuccal recession in the esthetic zone, 627–629
occlusion in success of implant-supported restorations, 685–688
oligodontia, 688–692
osseous defect associated with an immediately placed implant, 635–639
peri-implantitis due to residual cement around an implant, 681–685
single-implant esthetics complications, 305–312
CBCT (cone beam computed tomography)
see also 2D and 3D diagnostic imaging
medicolegal issues, 603, 607, 613–616
CDIs see Clostridium difficile infections
CEJ see cementoenamel junction
cemented implant restoration/comlications, 187–207
advantages, 187
allergic response, 196
cementation techniques, 197
cementing restorations onto teeth vs. implants, 188–193
cement selection, 193–197
crown–abutment and cement, 197–200, 201
etiology, 193–196, 197
foreign body reaction, 195–196
future, 203–206
hydroxyethyl methacrylate (HEMA), 196
osseointegration, 195–196
polytetrafluorethylene (PTFE), abutment, 201–203
prevention, 197–200, 201
problems associated with, 187–188
recommendations for best clinical practice, 201–203, 204–206
titanium corrosion, 196, 197
treatment, 201–206
cementoenamel junction (CEJ), peri-implantitis, 175–176
checklist, esthetic, implant placement, 302–305
CIST see cumulative interceptive supportive therapy
Clostridium difficile infections (CDIs)
anti-biotic prescribing, 53–54
gastrointestinal distress/anti-biotic-associated diarrhea, 53–54
compromised implant, defining, 154
computed tomography (CT) see 2D and 3D diagnostic imaging
computer-aided design/computer-aided manufacturing (CAD/CAM), 104
CAD/CAM individualized abutments, implant fractures, 138
prefabricated restorations, immediately loaded implant complications, 518–530, 531
crown–abutment and cement, 575–583
treatment of implant replacement, 573, 575, 576–577, 578, 579
restorative considerations, 577–580
risk assessment, 582
surgical considerations, 575–581
timing of implant placement, 575
tissue thickness reduction, 575, 576
placement, 575–582
crown–abutment and cement, 197–200, 201
CT (computed tomography) see 2D and 3D diagnostic imaging
cumulative interceptive supportive therapy (CIST), peri-implantitis, 179, 180, 181, 182
DASK see Dentium Advanced Sinus Kit
definitions
compromised implant, 154
flapless surgery, 481
immmediate loading, 495
implant failure, 153–154
implant success, 153–154
implant survival, 154
standard of care, 608
demineralized freeze-dried bone allograft (DFDBA), osseous defect associated with an immediately placed implant, 636–639
cone beam computed tomography (CBCT)
see also 2D and 3D diagnostic imaging
medicolegal issues, 603, 607, 613–616
consent, informed see patient informed consent
conventional radiography, peri-implantitis, 177–178
coronofacial malposition, 210, 212–214
corticosteroids complications, 63
etiology, 17
prevention, 27–28
treatment, 37–38
craniofacial growth implications, 572–583
classification, 581–582
etiology, 573–574
prevention, 575–582
recommendations, 580–581
replacement of implant restoration, 573, 575, 576–577, 578, 579
restorative considerations, 577–580
risk assessment, 582
surgical considerations, 575–581
timing of implant placement, 575
tissue thickness reduction, 575, 576
placement, 575–582
crown–abutment and cement, 197–200, 201
CT (computed tomography) see 2D and 3D diagnostic imaging
cumulative interceptive supportive therapy (CIST), peri-implantitis, 179, 180, 181, 182
DASK see Dentium Advanced Sinus Kit
definitions
compromised implant, 154
flapless surgery, 481
immmediate loading, 495
implant failure, 153–154
implant success, 153–154
implant survival, 154
standard of care, 608
demineralized freeze-dried bone allograft (DFDBA), osseous defect associated with an immediately placed implant, 636–639
bisphosphonates complications, 17–18
bone loss from an acute abscess around a dental implant, 640
buccal soft tissue recession on a restored central incisor implant, 630
cancer therapy complications, 23–24
cemented implant restoration/complications, 193–196, 197
complications and failure, prosthetic-related complications, 233–234
corticosteroids complications, 17 craniofacial growth implications, 573–574
dental implant complications, 1–6
debridement, buccal soft tissue recession, 388–390
diabetes complications, 19–20
diagnosis complications, 120–121
drug prescribing complications, 49–51
esthetic complications, adjacent implant restorations, 317–318
esthetic complications, malpositioned implants, 210–217
esthetic complications, prosthetic-related complications, 245–248
esthetic implant complications: soft tissue repairs, 676, 678
esthetic implant failure repair, 632–633
esthetic zone, malpositioned implant, corrective treatment, 653, 654
esthetic zone, malpositioned implant, treatment, 662, 671, 673, 674
esthetic zone, midbuccal recession, 627
flapless surgery complications, 481–482
free-hand implant placement complications, 120–121
gingival recession, 392, 394
human immunodeficiency virus (HIV) complications, 22–23
immediate implant placement (IIP) complications, 457–474
immunodeficiency complications, 22–23
implant failure, 109–112, 122–123, 124–126, 156–162
implant failure replacement in the esthetic zone, 643–644
implant fractures, 133–142, 243–244
implant naturalization, 145–149
implant occlusion complications, 565–566
implant-related legal claims, 603–616
intraoperative bleeding, 396
loose implant restoration syndrome, 263, 264
malpositioned implant in the esthetic zone, corrective treatment, 653, 654
malpositioned implant in the esthetic zone, treatment, 658, 662, 671, 673, 674
malpositioned implant in the esthetic zone, treatment and replacement, 647
malpositioning of implants, 123, 124, 125, 126
medicolegal issues, 600–617
midbuccal recession in the esthetic zone, 627
myocardial infarction complications, 10–11
nasal floor fracture, elevated segment collapse, 387
nerve perforation complications, 105
occlusion in success of implant-supported restorations, 686, 687
oligodontia, 688–692
osteointegration failure, 495–496
osseous defect associated with an immediately placed implant, 635
osteoporosis complications, 14
osteoradionecrosis (ORN), 24
overdenture attachment complications, 234–237
Paget’s disease of bone (PDB) complications, 14–15
Parkinson’s disease (PD) complications, 16–17
peri-implant diseases, 193–196, 197
peri-implantitis, 170–178
peri-implantitis due to residual cement around an implant, 681, 682
pharmacologic considerations, 17–18
phonetic complications, 245
planning complications, 68–71
postoperative sinusitis, 421
prosthesis fractures, 239–240
prosthodontic complications, malpositioned implants, 540–547
psychiatric disorders complications, 15
radiation therapy complications, 23–24
scanographic templates complications, 103
screw loosening and fractures, 240
single-implant esthetics complications, 299–300
sinus augmentation complications, 109–112
sinus graft infections, 416
sinusitis/sinus infections, 415–416
smoking complications, 20–22
stroke: cerebrovascular accidents complications, 11–13
surgical technique complications, 120–121
systemic disorders complications, 10–24
transcrestal sinus floor elevation complications, 430–437
valvular prosthesis placement complications, 13, 14
vascular embarrassment of segmental osteotomy, 383–384
explantation, peri-implantitis, 183
esthetic zone, malpositioned implants, 219–220
failure, implant see esthetic zone, implant failure replacement; implant failure
FESS (functional endoscopic sinus surgery), 411, 416, 421, 446
final restorations, immediately loaded implants, 513
esthetic complications, adjacent implant restorations, 317–318
esthetic complications, malpositioned implants, 210–217
esthetic complications, prosthetic-related complications, 245–248
esthetic implant complications: soft tissue repairs, 676, 678
esthetic implant failure repair, 632–633
esthetic zone, malpositioned implant, corrective treatment, 653, 654
esthetic zone, malpositioned implant, treatment, 662, 671, 673, 674
esthetic zone, midbuccal recession, 627
flapless surgery complications, 481–482
free-hand implant placement complications, 120–121
gingival recession, 392, 394
human immunodeficiency virus (HIV) complications, 22–23
immediate implant placement (IIP) complications, 457–474
immunodeficiency complications, 22–23
implant failure, 109–112, 122–123, 124–126, 156–162
fistulae, prosthetic-related complications, 254–255
fixed design, prosthodontic design and materials, 92, 93
flap design, guided bone regeneration (GBR), 364–366
flapless surgery complications, 481–493
  defining ‘flapless surgery’ 481
goals of therapy, 481

Schneiderian membrane perforation etiology, 399
incidence, 399
lateral window sinus elevation surgery, 399–411, 412
prevention, 399–404
transcrestal sinus floor elevation, 445
scope, dental implant complications, 1–7
etiology, 1–6
prevention and treatment, 6–7
screw loosening and fractures see also loose implant restoration syndrome
prosthetic-related complications, 240–243
screw mechanics, 288–293
screw vs. cement retention, treatment planning, 90–91
SFE see transcrestal sinus floor elevation complications
single-implant esthetics complications, 298–313
avoiding complications, 301–302
case report, 305–312
checklist, 302–305
etiology, 299–300
implant placement, 302–305
implant systems, 303
prevalence, 299–300
step-by-step clinical procedures, 305–312
success strategies, 300–301
tooth extraction, 301–302
sinus augmentation complications, 109–118
etiology, 109–112
immediately loaded implants, 502
prevention, 112–113
scanographic templates complications, 114–115, 118
treatment, 113–118
sinus elevation surgery see lateral window sinus elevation surgery complications
sinus floor elevation (SFE) see transcrestal sinus floor elevation complications
sinus graft infections, 416–421
etiology, 416
incidence, 416
prevention, 417–418
treatment, 418–421
sinusitis/sinus infections, 415–416, 417, 418, 421–422
etiology, 415–416
incidence, 415–416
sinus membrane perforation
osteotome-mediated sinus floor elevation (OMSFE), 434–436, 439–444
transcrestal sinus floor elevation, 434–436, 439–444
smoking cessation, medicolegal issues, 609
smoking complications
autogenous bone grafting, 355
etiology, 20–22
maintenance therapy, 587
prevention, 32–34
risks for implant therapy, 69–70
soft tissue grafting, esthetic complications, malpositioned implants, 224–226, 227, 228
standard of care definition, medicolegal issues, 608
standard of care limitation, patient informed consent, 611
stents, esthetic complications, malpositioned implants, 222, 223
steroid prescribing, complications, 63
Straumann Bone Level Service Set Supplement, 147, 148
stroke: cerebrovascular accidents complications
etiology, 11–13
prevention, 24–25
treatment, 36
superinfections (genitourinary), antibiotic prescribing, 57
surgery
see also computer-guided surgery; flapless surgery complications; immediately loaded implant complications; lateral window sinus elevation surgery complications
esthetic implant complications: soft tissue repairs, 677, 678–680
surgical placement, implant fractures, 139, 140
surgical stents, esthetic complications, malpositioned implants, 222, 223
surgical technique complications, 118–122, 126–128
etiology, 120–121
prevention, 121–122
treatment, 122
survival data, implant, 3, 153
suturaing, guided bone regeneration (GBR), 367, 368
swallowing an instrument or implant component, 255, 256
Swede-Vent implants, implant failure, 165
systemic disease, autogenous bone grafting, 355–356
systemic disorders complications, 10–41
etiology, 10–24
immediately loaded implants, 502
planning complications, 69
prevention, 24–36
treatment, 36–41
systemic inflammatory diseases, maintenance therapy, 587
technical complications, 81–82
tibia donor site, autogenous bone grafting, 335–336
tissue trauma, implant failure, 158–159
titanium corrosion, cemented implant restoration/complications, 196, 197
tools, retrieval/removal, 564–565
training, inadequate training, medicolegal issues, 608
transcrestal sinus floor elevation complications, 427–451
benign paroxysmal positional vertigo (BPPV), 437, 444, 450
bone-added osteotome sinus floor elevation (BAOSFE), 427–429
etiology, 430–437
future, 444–445
implant displacement, 433
implant survival and complications, 429–430
incidence, 427–430
infection, 430–431, 437–438
management, 445–450
membrane tear/perforation, 434–436, 439–444
osteotome-mediated sinus floor elevation (OMSFE), 427–430, 432–439, 441–450
poor patient experience, 444
premature loading, 439
prevention, 437–445
primary implant stability, 432–433
primary stability for the implant, 438–439
Schneiderian membrane perforation, 445
sinus membrane perforation, 434–436, 439–444
treatment
Alzheimer’s disease complications, 37
antibiotics complications, 39
anticoagulants complications, 38–39
bisphosphonates complications, 38
bone loss from an acute abscess around a dental implant, 640–641, 642, 643
buccal soft tissue recession on a restored central incisor implant, 630–632
cancer therapy complications, 41
cemented implant restoration, 201–206
corticosteroids complications, 37–38
craniofacial growth implications, 575–582
devitalized buccal plate, 390
diabetes complications, 39–40
diagnosis complications, 122
esthetic complications, adjacent implant restorations, 320–326, 327–329
esthetic complications, malpositioned implants, 223–230
esthetic complications, prosthetic-related complications, 235, 236, 247, 248–253, 254
esthetic implant failure repair, 633–634
esthetic zone, malpositioned implant, corrective treatment, 654–656, 657, 658
esthetic zone, malpositioned implant, treatment, 662–665, 671–672, 674–675
esthetic zone, midbuccal recession, 627–629
free-hand implant placement complications, 122
gingival recession, 392–393
immediate implant placement (IIP) complications, 478
implant failure, 162–167
implant failure replacement in the esthetic zone, 644–646
implant fractures, 142, 244, 245
implant naturalization, 149–152
implant occlusion complications, 568–569
intraoperative bleeding, 398
long-term retention of a “hopeless” implant, 667–670
loose implant restoration syndrome, 263–269, 284–288
maintenance therapy complications, 594–597
malpositioned implant in the esthetic zone, corrective treatment, 654–656, 657, 658
malpositioned implant in the esthetic zone, treatment, 659–661, 662–665, 671–672, 674–675
malpositioned implant in the esthetic zone, treatment and replacement, 648–651, 652, 653
malpositioning of implants, 234, 235, 236, 237, 563–565
mandibular symphysis complications, 124–126
midbuccal recession in the esthetic zone, 627–629
myocardial infarction complications, 36
nasal floor fracture, elevated segment collapse, 387–388
nerve perforation complications, 107–109, 110–112
occlusion in success of implant-supported restorations, 687–688
oligodontia, 688–692
osseous defect associated with an immediately placed implant, 636–639
osteoporosis complications, 36–37
osteoradionecrosis (ORN), 41
overdenture attachment complications, 237–239
overmobilization, i-flap, 391
Paget’s disease of bone (PDB) complications, 37
Parkinson’s disease (PD) complications, 37
peri-implantitis, 179–183
peri-implantitis due to residual cement around an implant, 682–685
pharmacologic considerations, 37–39
phonetic complications, 245
postoperative sinusitis, 421–422
prosthesis fractures, 240
prosthodontic complications, malpositioned implants, 553–556
psychiatric disorders complications, 37
radiation therapy complications, 41
scanographic templates complications, 104, 105
screw loosening and fractures, 240–243
sinus augmentation complications, 113–118
sinus graft infections, 418–421
stroke: cerebrovascular accidents complications, 36
surgical technique complications, 122
systemic disorders complications, 36–41
valvular prosthesis placement complications etiology, 13, 14
 prevention, 25–26
 treatment, 36
vascular embarrassment of segmental osteotomy, 385–386
valvular prosthesis placement complications etiology, 13, 14
 prevention, 25–26
 treatment, 36
vascular embarrassment of segmental osteotomy, 383–386
articulated casts, 385
diagnostic procedures, 384–385
etiology, 383–384
prevention, 384
treatment, 386
treatment planning, 385–386
virtual, 3D planning, treatment planning, 97–98
wound dehiscence, autogenous bone grafting, 344–349
