Preface xiii

About the Author xvii

1 Randomized clinical trials with noncompliance: issues, definitions and problems of commonly used analyses 1
  1.1 Randomized encouragement design (RED) 4
  1.2 Randomized consent designs 6
    1.2.1 Single-consent randomized design (SCRD) 7
    1.2.2 Double-consent randomized design (DCRD) 8
  1.3 Treatment efficacy versus programmatic effectiveness 9
  1.4 Definitions of commonly used terms and assumptions 10
  1.5 Most commonly used analyses for a RCT with noncompliance 13
    Exercises 20

2 Randomized clinical trials with noncompliance under parallel groups design 21
  2.1 Testing superiority 26
  2.2 Testing noninferiority 35
    2.2.1 Using the difference in proportions 35
    2.2.2 Using the ratio of proportions 36
    2.2.3 Using the odds ratio of proportions 38
3.5 Test homogeneity of index in large strata 119
  3.5.1 Testing homogeneity of the proportion difference 120
  3.5.2 Testing homogeneity of the proportion ratio 122
  3.5.3 Test homogeneity of the odds ratio 125
Exercises 128
Appendix 128

4 Randomized clinical trials with noncompliance under
cluster sampling 137
  4.1 Testing superiority 143
  4.2 Testing noninferiority 146
    4.2.1 Using the difference in proportions 147
    4.2.2 Using the ratio of proportions 148
    4.2.3 Using the odds ratio of proportions 149
  4.3 Testing equivalence 151
    4.3.1 Using the difference in proportions 151
    4.3.2 Using the ratio of proportions 152
    4.3.3 Using the odds ratio of proportions 152
  4.4 Interval estimation 153
    4.4.1 Estimation of the proportion difference 153
    4.4.2 Estimation of the proportion ratio 154
    4.4.3 Estimation of the odds ratio 157
  4.5 Sample size determination 158
    4.5.1 Sample size calculation for testing superiority 159
    4.5.2 Sample size calculation for testing noninferiority 164
    4.5.3 Sample size calculation for testing equivalence 170
  4.6 An alternative randomization-based approach 172
Exercises 176
Appendix 181

5 Randomized clinical trials with both noncompliance and
subsequent missing outcomes 185
  5.1 Testing superiority 193
  5.2 Testing noninferiority 196
    5.2.1 Using the difference in proportions 196
CONTENTS

5.2.2 Using the ratio of proportions 197
5.2.3 Using the odds ratio of proportions 198
5.3 Testing equivalence 200
  5.3.1 Using the difference in proportions 200
  5.3.2 Using the ratio of proportions 201
  5.3.3 Using the odds ratio of proportions 201
5.4 Interval estimation 202
  5.4.1 Estimation of the proportion difference 202
  5.4.2 Estimation of the proportion ratio 203
  5.4.3 Estimation of the odds ratio 205
5.5 Sample size determination 206
  5.5.1 Sample size calculation for testing superiority 207
  5.5.2 Sample size calculation for testing noninferiority 212
  5.5.3 Sample size calculation for testing equivalence 213
5.6 An alternative missing at random (MAR) model 221
  5.6.1 Estimation of the proportion difference 226
  5.6.2 Estimation of the proportion ratio 229
  5.6.3 Estimation of the odds ratio 230
Exercises 233
Appendix 233

6 Randomized clinical trials with noncompliance in repeated binary measurements 247
  6.1 Testing superiority 253
  6.2 Testing noninferiority 256
    6.2.1 Using the difference in proportions 256
    6.2.2 Using the ratio of proportions 257
  6.3 Testing equivalence 260
    6.3.1 Using the difference in proportions 260
    6.3.2 Using the ratio of proportions 260
  6.4 Interval estimation 261
    6.4.1 Estimation of the proportion difference 261
    6.4.2 Estimation of the proportion ratio 268
6.5 Sample size determination 273
  6.5.1 Sample size calculation for testing superiority 273
  6.5.2 Sample size calculation for testing noninferiority 275
  6.5.3 Sample size calculation for testing equivalence 278
Exercises 281
