Introduction xxxiii

1 State-of-the-Art of Combined Cooling, Heating, and Power (CCHP) Systems 1
   1.1 Introduction 1
   1.2 Prime Movers 4
       1.2.1 Reciprocating IC Engines 4
       1.2.2 Combustion Turbines 6
       1.2.3 Steam Turbines 6
       1.2.4 Micro-turbines 7
       1.2.5 Stirling Engines 9
       1.2.6 Fuel Cells 10
   1.3 Thermally Activated Technologies 11
       1.3.1 Absorption Chillers 13
       1.3.2 Adsorption Chillers 15
       1.3.3 Desiccant Dehumidifier 16
   1.4 System Configuration 17
       1.4.1 Micro-Scale CCHP Systems 17
       1.4.2 Small-Scale CCHP Systems 20
4 Energy Hub Modeling and Optimization-Based Operation Strategy for CCHP Systems 87
4.1 Introduction and Related Work 87
4.2 System Matrix Modeling 88
  4.2.1 Efficiency Matrices of System Components 88
  4.2.2 Dispatch Matrices 89
  4.2.3 Conversion Matrix of the CCHP System 91
4.3 Optimal Control Design 92
  4.3.1 Decision Variables 92
  4.3.2 Objective Function 93
  4.3.3 Non-linear Equality Constraint 93
  4.3.4 Non-linear Inequality Constraints 95
  4.3.5 Optimization Algorithm 97
4.4 Case Study 97
  4.4.1 Hypothetical Building Configuration 97
  4.4.2 Simulation Parameters 98
  4.4.3 Test Results 99
4.5 Summary 102
4.A Non-convex Optimization Algorithm 103
  4.A.1 EC Function Construction 103
    4.A.1.1 PES 103
    4.A.1.2 HTCS 103
    4.A.1.3 CDER 104
    4.A.1.4 EC Function 104
  4.A.2 Optimization Problem Formulation 104
    4.A.2.1 Objective Function 104
    4.A.2.2 Non-convex and Non-linear Equality Constraints 105
    4.A.2.3 Linear Inequality Constraints 105
    4.A.2.4 Non-convex and Non-linear Inequality Constraints 106
  4.A.3 Optimization Algorithm 106
    4.A.3.1 An Exact Penalty Formulation 106
    4.A.3.2 Convexification of the Non-convex Inequality Constraints 108
    4.A.3.3 Summary 111
References 112
## 5 Short-Term Load Forecasting and Post-Strategy Design for CCHP Systems

5.1 Introduction and Related Work 113
5.2 Estimation Model and Load Forecasting
  5.2.1 First Stage Identification – IV Estimation 115
  5.2.2 Second Stage Identification – TSRLS 116
  5.2.3 Load Forecasting 118
5.3 Operation Strategy Design
  5.3.1 Optimal Operation Strategy for Forecasted Load 120
  5.3.2 Post-strategy Design 120
5.4 Case Study
  5.4.1 Hypothetical Building Configuration 124
  5.4.2 Weather and Load Data 124
  5.4.3 Test Results 130
5.5 Summary 134
5.A Closed-Form Identification Solution of Quadratic ARMAX Model
  5.A.1 Quadratic ARMA Model 134
  5.A.2 Quadratic ARMAX Model 137
References 138

## 6 Complementary Configuration and Operation of a CCHP-ORC System

6.1 Introduction and Related Work 140
6.2 System Configuration and Formulation
  6.2.1 Energy Flows and Balances 142
  6.2.2 Equipment Efficiency and Energy Conversion 143
  6.2.3 Two Key Adjustable Parameters 145
  6.2.4 Electricity to Thermal Energy Output Ratio 145
6.3 Optimal Operation Strategy for Normal Load Cases
  6.3.1 Normal Load Case 1: $E_{user} = KQ_{eq}$ 146
  6.3.2 Normal Load Case 2: $E_{user} < KQ_{eq}$ 146
  6.3.3 Normal Load Case 3: $E_{user} > KQ_{eq}$ 147
  6.3.4 Decision-making Process 148
6.4 Operation Strategy for Overload Cases
  6.4.1 Overload Case 1: $E_{user} > \bar{E}_{pgu}^o$ and $Q_{eq} > \bar{Q}_r$ 149
  6.4.2 Overload Case 2: $E_{user} > \bar{E}_{pgu}^o$ and $Q_{eq} \leq \bar{Q}_r$ 150
  6.4.3 Overload Case 3: $E_{user} \leq \bar{E}_{pgu}^o$ and $Q_{eq} > \bar{Q}_r$ 151
6.5 EC Function of the CCHP-ORC System 152
6.6 Case Study
  6.6.1 Hypothetical Building Configuration 152
  6.6.2 Test Results 152
6.7 Summary 155
