Contributors, ix
Preface, xiii

Part 1 Syncope and TLOC overview

1 Definition and classification of syncope and transient loss of consciousness, 3
Jean-Jacques Blanc

2 Epidemiologic aspects of transient loss of consciousness/syncope, 8
Robert S Sheldon, Anna Serletis

3 Pathophysiology of syncope: postural, neurally-mediated, and arrhythmic, 15
W Wieling

4 Cerebral perfusion in syncope, 20
J Gert van Dijk, Roland D Thijs

5 Risk stratification—impact on diagnostic strategy, 24
Brian Olshansky

Part 2 Clinical evaluation strategies

6 Value and limitations of clinical history in assessing cause of syncope, 31
Paolo Alboni, Maurizio Dinelli

7 Emergency department evaluation of transient loss of consciousness/syncope, 36
François P Sarasin

8 The essential autonomic assessment for evaluating the cause of syncope, 39
Carlos A Morillo, Juan C Guzman

9 Neurally-mediated reflex syncope: recognition by history and clinical testing, 44
Anna Serletis, Robert S Sheldon
Contents

10 Value and limitations of ambulatory electrocardiographic monitoring, 51
   Andrew D Krahn

11 Recording ambulatory blood pressure in the syncope and
   TLOC evaluation, 56
   Dietrich Andresen

12 Electrophysiologic testing: value and limitations in the transient loss of
   consciousness/syncope evaluation, 61
   Suneet Mittal

13 Intolerance to upright posture in autonomic failure and the postural
   tachycardia syndrome: assessment and treatment strategies, 67
   Christopher J Mathias

14 Improving tolerance to upright posture: current status of tilt-training
   and other physical maneuvers, 72
   Hugo Ector, Tony Reybrouck

15 Syncope in patients with bundle-branch block and other conduction
   system abnormalities, 76
   Angel Moya

Part 3 Specific conditions

16 Treatment strategies in neurally-mediated reflex syncope: effectiveness of
   drugs, pacing, and physical maneuvers, 83
   Richard Sutton

17 Structural heart disease, syncope, and risk of sudden death: selection of
   patients for implantable cardioverter-defibrillator therapy, 89
   Kathy L Lee, Hung-Fat Tse, Chu-Pak Lau

18 Channelopathies as a cause of syncope, 95
   T Boussy, Pedro Brugada

19 Distinguishing seizures and pseudosyncope from syncope, 102
   Adam P Fitzpatrick

20 Syncope and transient loss of consciousness in children and adolescents:
   congenital and acquired conditions, 111
   Hugh Calkins

21 Transient loss of consciousness, syncope, and falls in the elderly, 119
   Rose Anne Kenny

22 Drug-induced (iatrogenic) syncope, 129
   Gerald V Naccarelli
Part 4 Economic and research aspects

23 Syncope and the competitive athlete: recommendations for evaluation and permission to compete, 135
  Franco Giada, Antonio Raviele

24 Role of syncope management units, 140
  Win K Shen, Michele Brignole

25 The impact of syncope and transient loss of consciousness on quality of life, 148
  Blair P Grubb

Part 5 Current controversies and future directions

26 Driving and flying restrictions for the syncope and/or implanted cardiac device patient, 153
  Christina M Murray, Dwight W Reynolds

27 Clinical trials landscape: what’s new, what’s ongoing, what do we need, 157
  Michele Brignole, David G Benditt, Wouter Wieling

28 Syncope and transient loss of consciousness: multidisciplinary management, 169
  A John Camm

29 Syncope practice guidelines initiative, 176
  David G Benditt

Appendix: syncope consortium members, 184
  Index, 188
