INDEX

Page numbers in *italics* represent figures; those in **boldface**, tables.

ABE process. *See* Acetone-butanol-ethanol fermentation process
Acetate, homoacetogenic conversion of glucose to, 354
Acetic acid
  global demand for, 351
  properties of, 351
  structure and process for, **15**
  thermophysical properties of, 364
Acetic acid production, 351–352
  as attractive alternative, 351
  microbial, 352
  anaerobic homoacetogens, 352
  homoacetogenic fermentation, 354
  metabolic pathways of homoacetogen, 352–354, 353
*Acetobacterium*, in acetic acid production, 352
Acetone, structure and process for, **15**
Acetone-butanol-ethanol (ABE) fermentation process, 246
  "acid crash," 243
  alternative feedstock for, 243–246, 244, 245
  for *n*-butanol production, 236–238, 237
  effects on Clostridia of, 241–243, 242
  shortcomings of, 238
  strain development for improved, 240
Acetyl group, in bioconversion of lignocellulosic biomass, 97
Acid pretreatment, **9**, 102, 102
Acrylic acid, structure and process for, **15**
Acrylic acid pathway, in propionic acid production, **333**, 334
Adipic acid, **16**
Adsorption
  for carboxylic acid production, 391
  in *n*-butanol production, **248**, 248–249

*Agonoscelis pubescens*, as alternative feedstock, 223
Agricultural processing industry, biorefinery concept in, 2.
  *See also* Biorefineries
Agro-industrial residues, in lignocellulosic biomass, 195. *See also* Lignocellulosic biomass
Air-lift bioreactors (ALBs), 304
Alcohol oxidase 1 (AOXI) promoter, 155
Alcohols. *see* Higher alcohols
Algae, biophotolysis by, 263–264. *See also* Microalgae
Algae biorefineries, 12–13, **13**
Algal oil production, biorefinery for, 13, **13**
Alkali catalysts
  biodiesel contaminated by, 219
  in biodiesel production, 212
Alkali pretreatment, **9**, 99–101, **100**, 101
Alkanes, 13
Alkenes, 13
Ammonia fiber expansion (AFEX), **9**, 99, 100, 101, **101**
Ammonia recycled percolation (ARP) process, **99**, 100
Ammonia steeping, **99**, 100, **100**
α-amylase gene, heterologous expression of, 125
Amylases, 111–112
  α-amylases, 116
    industrial production of, 120–121
    properties of, 113–114
  β-amylases
    industrial production of, 121
    properties of, 114
  classification of, 115–117, **116**
  industrial applications, 53, 124, **124**
Amylases (cont’d)
industrial production of, 118–120
α-amylase, 120–121
β-amylase, 121
glucoamylase, 121
from starchy and nonstarch feedstocks, 121–122
mode of action of, 114–115,
in nature, 113
in plant molecular farming, 125
stability of, 122
with amino acids, 123
chemical stabilization method for, 123–124
with extremophilic microorganisms, 122
immobilization method for, 124
metal ions stabilization method for, 123–124
with protein engineering, 123
with recombinant microorganisms, 122–123
starch-binding domains of, 117–118,
for starch enzyme hydrolysis, 111
in starch enzyme hydrolysis, 113
structure of, 117
types of, 113–114
Amylopectin, chemical structure of, 112
Amylose, chemical structure of, 112
Anaerobic digestion, design parameters for, 287,
287–288
Anaerobic digestors, agitation designs for mixing in, 284,
285
Animal fats, as alternative feedstock, 221–223,
222
Animal feed, xylanases in, 158
Anionic ring opening polymerization (AROP), 311
Anthocyanins, 445
Antioxidant extracts, 441
Antioxidants, dietary, 443
isolation and production of, 444–445
pretreatments for, 444
sources of, 443–444
Aquaculture biorefineries, 12–13, 13
Aquacultures, xvii
Archer Daniels Midland Co., 220
Aryl alcohol oxidase (AAO), 178–179
Aspergillus spp., cell morphology of, 385, 386
Aspongubus viduatus, as alternative feedstock, 223
ATPs, in butyrate production, 357
Australia, microalgae production in, 83
Autohydrolysis pretreatment, 101–102
Aviation industry, biofuels in, 208
Bacteria. See also Microorganisms
butyric acid, 355, 356
fermentative, 266 (see also Fermentation)
lactic acid, 295–299, 296, 299
methanogenic, 282
propionic acid-producing, 331–332
acrylic acid pathway of, 31, 333
dairy propionibacteria, 333
dicarboxylic acid pathway of, 332, 333–334
general characteristics of, 332
propionibacteria, 332–333
succinic acid-producing, 320–321
Basidiomycetous fungi, lignins degraded by, 167–168
Beef tallow, FA composition of, 221
Beta glucosidases (BGs), 134
in enzymatic hydrolysis, 196
improvement, 137, 137–138
Betalains, 445
Bio-based fuels, 392
Bio-based products, commercial production of, 1, 18
Biobleaching, with xylanases, 159
Biocenosis, formation of, 282, 282
Bio-deinking, xylanases in, 159
Biodiesel, 13
advantages and disadvantages of, 212–213
composition of, 214
cetane number, 217–218
contaminants, 219–220
exhaust emissions, 217
and heat of combustion, 218
kinematic viscosity, 216–217
lubricity, 218–219
minor components, 220
and oxidative stability, 216
countries producing, 205–206
defined, 205, 207
FAAE in, 215
and low temperature, 214–216, 215
oxidative stability of, 227
primary market for, 227
properties of, 205
Biodiesel production, 4–5
alternative feedstocks for, 220–221
alternative methods, 211–212
alternative to, 14
capacity for, 205–206
catalysts for, 208, 208–209
crops for, 62
from edible oils, 50
enzymes in, 209
glycerol generated in, 5–6
by immobilized lipase, 85
influence of free fatty acids on, 211
integrated biorefinery for, 225
integrated soybean biorefinery for, 5, 5
microalgal feedstocks for, 225
reaction conditions for, 209–210
soybean oil for, 227
technical hurdles for, 226
technologies for, 5
transmethylation of triacylglycerols in, 205, 206
use of additives in, 227
Biodiesel standards, 206–208
ASTM D6751, 206, 206–207
ASTM D7467, 207, 208
B6-B20, 207, 208
EN 14214, 206, 207, 207
Bioenergy, targeted supply of, 73. See also Energy crops
Bioethanol, 111, 194. See also Ethanol
Bioethanol production, 14
by anaerobic fermentation, 85–86
costs of, 43, 43
Biofuels, xvii, 111
  first-generation, 7
  second-generation, 12, 63
  sources of, 221
terpene-based, 14

Biofuels production
  impact of enhanced, 56
  lignocellulosic biomass for, 193
  oilseed crops for, 221

Biogas, from biowaste, 289, 289–290
Biogas plants, classification of, 283, 284
Biogas process, 280
  after-treatment of process residues in, 288
  agitation in, 284–285, 285
  anaerobic digestion for, 281, 281
  conditions for, 281, 281–282, 282
  disturbances in, 282–283
  dry and wet fermentations in, 285–286, 286
  fermenter design in, 287, 287–288
  double- and multistage reactors, 283–284, 284
  single stage fermenters, 283, 283
  heating in, 286–287
  methanation reactor in, 287
  percolation reactor in, 285–286, 286
  pretreatment of substrates in, 288
  purification, 289
  substrates in, 280, 280–281, 283

Biohydrogen production. See also Hydrogen production by anaerobic fermentation, 86–87
  commercialization of, 273
  fuel cell integration of, 272–273
  technologies for, 272

Biotechnology, industrial, 327

Biowaste. See also Wastes
  biogas from, 289, 289–290
dry solid fermentation of, 290, 290
  incineration of, 280

Bipolar membrane electrodialysis (BMED), 366, 366–367

Blue enzyme. See Laccases

Bread, xylanases in, 158

BRENDA database, 116

Brown greases, as alternative feedstock, 222, 224
1,4-butanediol, structure and process for, 15
2,3-butanediol
  applications for, 399
glycerol metabolic pathway for, 401
  importance of, 409
  properties of, 406
  stereoisomers of, 406
  structure and process for, 15

2,3-butanediol production, 406
  effect of organic acid addition on, 409
gene expression for, 409
  lignocellulosic materials for, 408
  microorganisms and pathways, 407
  use of sugars as substrates for, 407–408
Butanol
bioconversion of, 235
compared with ethanol, 14
market for, 253–254
properties of, 235, 236
n-Butanol
biological production of, 235
cytoxicity of, 238
structure and process for, 15
n-Butanol biosynthesis
ABE pathway, 238, 240
cytoxicity of, 238
structure and process for, 15
keto acid pathway, 250–252, 251
reversed β-oxidation cycle in, 250
2-Butanol biosynthesis, 252–253
Butanol production, 253
metabolic engineering of solventogenic Clostridia in,
241–243, 242
methods of, 236
routes for, 235, 237
n-Butanol production, 253, 254
ABE fermentation in, 236–238, 237, 246
and alternative feedstock, 243–246, 244, 245
fermentation kinetics in, 238–240, 240
metabolic engineering for, 250, 250–253, 251
separation methods in, 246–249, 248
via solventogenic Clostridium, 238, 239
strain development for improved ABE fermentation, 240
Butanol to acetone ratio, 242–243
Butyrate, Clostridium species producing, 356
Butyric acid
fermentation, 362, 367
from petroleum feedstock, 367
properties of, 351
structure and process for, 15
thermophysical properties of, 364
Butyric acid production, 351–352
from different substrates, 358
fermentation in, 358, 358
microbial
butyric acid bacteria, 355, 356
factors affecting fermentation in, 357–358
metabolic pathway, 355, 357, 357
Cadaverine, 16
Camelina (Camelina sativa (L.) Crantz) oil, 51, 52, 53
Cane bagasse
PHA fermentation on hydrolysates of, 420, 420
as potential feedstock, 415
Canola, 53, 54–55
Carbohydrate-Active Enzymes database, 133
Carbohydrates
in corn grains, 3
effects on fermentation performance of, 322
from microalgae, 79
from soybean, 5, 6
Carbon dioxide (CO₂), in succinic acid production process, 324
Carboxylic acid biosynthesis
cytoplasmic pathways in, 382–384
filamentous fungi in, 379, 379–380
glycolysis in, 380–381
metabolic engineering in, 384
TCA cycle in, 381
transportation in, 381–382
Carboxylic acids, 375, 376. See also specific acids
fermentatively produced, 364–365
microbial production of, 375
Carboxylic acids production, 388, 392
fermentation processes for, 361, 362
extractive fermentation, 362–363, 364
immobilized-cell bioreactor, 361–362
operating mode, 361
precipitation in, 391
separation methods in, 363–365, 364
adsorption, 366
electrodialysis, 366, 366–367
extraction, 365–366
precipitation, 365
Carboxymethylcellulose (CMC), 135
β-carotene production, from algae, 82–83
Carotenoids, 445, 446
Cassava
characteristics and properties of, 33, 33
chemical composition of, 32, 32
as feedstock, 41, 42
in starch manufacturing process, 36
Cassava crops, 35
agricultural practices with, 38, 39
agronomic traits, 38, 39
food application of, 35–36
world distribution of, 28, 28
world production of, 28, 29
Castor (Ricinus communis L.) crops, 55
Castor (Ricinus communis L.) oil, 55–56, 56

properties of, 399–401
structure and process for, 15
1,3-propanediol production, 399–401
with Clostridium butyricum strains, 404–405
effects of co-substrate and nutrients on, 404–405
from fermentation types, 403, 403
heterologous genes for, 405–406
by Klebsiella species, 401–404, 403
with mutated Clostridium butyricum strains, 405
with raw glycerol, 405
n-propanol, 15, 252, 253
Propionibacteria, 332–333, 345
dairy, 333
gene sizes and characteristics of, 335
metabolic engineering of, 345
genetic and metabolic engineering, 336
genetics and cloning vectors, 334–336
transformation in, 336
shuttle vectors for, 335, 335
Propionibacterium acidipropionici
gene size and characteristics of, 335
in propionic acid fermentation, 339
Propionic acid
bacteria, 331–334, 332, 332, 333
fermentation of, 331, 345
FBBs in, 342, 342–343, 344
immobilized-cell, 339, 341–342
with online ED, 345
with in situ product recovery, 343–345, 344, 344
fermentation processes, 336
free-cell, 338–341, 339, 340
renewable feedstocks, 337, 337–338
properties of, 331
structures and process for, 15
thermophysical properties of, 364
U.S. market for, 331
Propionic acid production
cell density in, 35
from low-cost renewable feedstocks, 337, 337
Protease, from CSL, 4
Protease-activated antimicrobial peptide (PAMP) gene, 336
Protein
in corn grains, 3
from microalgae, 80
from soybean, 5, 6
whey, 337
Proton exchange membrane fuel cells (PEMFCs), 263
Pullulanase, properties of, 114
Pulper system, in biogas technology, 289, 289
Putrescine, 16
Pyruvate kinase, in carboxylic acid biosynthesis, 380

Ramie, xylanases in cleaning of, 159
Rapeseed/canola, for biodiesel, 205
Rapeseed oil, utilization of, 54
Rapeseed oil germplasm, composition of, 53, 54
Reactors
  continuous stirred-tank, 340
  for hydrogen production, 269 (See also Bioreactors)
  stirred-tank, 385
Recombinant DNA technology, in xylanase production, 155–156
Recombinant enzymes, in CBP, 141
Recycling, in biorefinery industry, 18
Reductive TCA pathway (rTCA), in fumaric acid production, 380
Response surface methodology (RSM), 154, 210
Rhizopus oryzae
  E. coli’s phosphoenolpyruvate carboxylase in, 385
  in fumaric acid production, 378
  metabolic engineering of, 384–385
  morphologies of, 386
Rhizopus spp.
  cell morphology of, 385, 386
  central metabolic pathway of, 299–302, 300
  ethanol production in, 301, 301
  in lactic acid production, 299
  L-lactic acid fermentation by, 302, 303, 304
  pyruvate metabolism in, 300–301, 301
Rhodobacter sphaeroides, in photodecomposition processes, 266
Rice
  characteristics and properties of, 33, 33
  chemical composition of, 32, 32
  rice starch produced from, 36–37
Rice bran, as alternative feedstock, 222, 224
Rice crops
  agricultural practices, 38, 39
  agronomic traits, 38, 39
  categories of, 36
  world distribution of, 28, 28
  world production of, 28, 29
Ring opening polymerization (ROP)
  coordination insertion, 311
  in polylactic synthesis, 309
SAA process, 99, 100, 100
Saccharification
  biomass, 131, 142
  in lignocellulosic refining, 10
  process, 111
Saccharomyces cerevisiae, 11, 40, 155–156
Salmon oil, as alternative feedstock, 222, 223
Schizochytrium limacinum, microalgal oil production from, 226
Screening methods, strain improvement for ABE fermentation by, 240, 241
Secondarily treated sewage (STS), 84
Selective catalytic reduction (SCR), in biodiesel production, 213
Separate hydrolysis and fermentation (SHF), 10, 196, 197
Separation methods, 393
  in filamentous fungal fermentations, 390–391, 391
  in n-butanol production, 246–249, 248
  in propionic acid production, 343
Simultaneous fermentation and separation (SFS), in carboxylic production, 391
Simultaneous saccharification and cofermentation (SSCF), 196, 200–201
Simultaneous saccharification and fermentation (SSF), 7, 196, 198–200, 199
  compared with SHF, 200
  disadvantages of, 200
  enzyme loading in, 199
  fermenting microorganisms in, 198–199, 199
  inhibitors in, 200
  in lignocellulosic refining, 10
  process, 199
  substrate loading in, 199
  temperature, 199–200
  yeast loading in, 199
Soapstock, as alternative feedstock, 222, 224
Solar energy, in direct biophotolysis, 264
Solid-state fermentation, of amylases, 119
Solid waste materials, in biogas process, 286. See also Wastes
Solvent, industrial “green,” 4
Sorghum (Sorghum bicolor), as energy crop, 64, 66, 66–67
Sorghum bug, as alternative feedstock, 223
Sorghum crops, 29, 31–32
  agricultural practices, 38, 38
  agronomic traits of, 38, 38
  as energy crops, 41
  subsistence, 31–32
  world production of, 28, 29
Sorghum juice quality, effects of harvesting time and method on, 66
Soybean crops
  distribution of, 53
  genetic engineering technologies for, 54
Soybean meal, 6, 6
Soybean oil, in biodiesel production, 227
Soybean refineries
  for biodiesel production, 4–5, 5, 5
  nutritional products of, 6–7
  technologies used in, 5
Soybeans
  components of, 5, 5
  U.S. production of, 4
Soybean seed, composition of, 53
Starch, 111
  as amylase substrate, 112–113
  components of, 112, 112–113
  ethanol from, 62
  properties of, 112
Starch crops, 33, 322–33
agricultural practices, 38, 39
agronomic traits, 38, 39
in biorefinery, 37–40, 39, 41, 42, 42, 43, 43
cassava, 28, 29, 35–36
characteristics and properties of, 33, 33
chemical compositions of, 32, 32
corn, 29, 33–34
potato, 28, 29, 32
rice, 28, 29, 36–37
wheat, 28, 29, 33, 34
world distribution of, 28, 28
world production of, 28, 29
Steryl glucosides, in biodiesel, 220
Stirred-tank reactors (STRs), 340, 385
Strain improvement, 384
Styrene, structures and process for, 15
Submerged fermentation (SMF), of amylases, 119
Succinic acid, 375
engineered strains of, 317, 318
properties of, 317
recovery and purification, 324
electrodialysis in, 326, 326
ion exchange and crystallization, 326–327
precipitation, 325
reactive extraction, 325, 325–326
from renewable resources, 317–318
structures and process for, 15
Succinic acid producers, 318
A. succiniciproducens, 318–319, 320
A. succinogenes, 319, 320
C. glutamicum, 320, 321
carbon sources for, 322–323
E. coli, 320, 321–322
M. succiniciproducens, 319, 320, 321
Succinic acid production
downstream processes of, 317
evolutionary engineering in, 322
fermentation process optimization in, 323–324
integrated process for, 327
processes in, 317, 318
reactive extraction process in, 325, 325–326
Sucrose, ethanol from, 62
Sugar beet (Beta vulgaris)
agronomic options to increase yields for, 67, 67
as energy crop, 64, 67–68
Sugar beet crops
agricultural practices, 38, 38
agronomic traits of, 38, 38
chemical composition of, 29
processing of, 29
world distribution of, 28, 28
world production of, 28, 29
Sugar beet molasses, chemical composition and properties of, 40, 40
Sugarcane (Saccharum spp.)
bioethanol using, 195
as energy crop, 68–69
sugar production from, 28–30, 30
Sugarcane bagasse, in propionic acid production, 338
Sugarcane biorefineries, 7, 7
Sugarcane crops, 28–31, 29, 30
agricultural practices, 38, 38
agronomic traits of, 38, 38
chemical composition of, 29
as energy crop, 41
refinery process in, 30–31
world distribution of, 28, 28
world production of, 28, 29
Sugarcane molasses, chemical composition and properties of, 40, 40
Sugar compounds, and yeast fermentation, 40, 40–41
Sugar crops
agricultural practices, 38, 38
agronomic traits of, 38, 38
in biorefinery, 27–28, 37–40, 38, 40, 40–41
sugar beet, 28, 29
sugarcane, 28–31, 29, 30
sweet sorghum, 29, 31–32
world distribution of, 28, 28
world production of, 28, 29
Sugars, as substrates for 2,3-butanediol production, 407–408
Sunflower (Helianthus annuus L.), achene oil concentration in, 48
Sunflower (Helianthus annuus L.) crops, 55
Supercritical fluids, in biodiesel production, 211–212
Surface area, in enzyme hydrolysis, 98
Sweet sorghum. See Sorghum
Switchgrass (Panicum virgatum)
biomass yield losses during mechanized harvest of, 70
effects of delayed harvest on, 71
as energy crop, 64, 69, 69–70, 70, 71
yield for, 69
Syngas for biofuels production, 245
fermentation pathways in, 240
Synthetic biology approaches, 254
Systems biology, 393
Systems metabolic engineering, of M. succiniciproducens, 327
Tall oil, as alternative feedstock, 224
Technology Information, Forecasting & Assessment Council (TIFAC), 194
Terpene-based biofuels, 14
Terpenes, 13
Textile industry, use of laccase in, 182
Textiles, xylanases in cleaning of, 159
Thermoanerobacterium saccharolyticum, 201
Thermomyces lanuginosus, in xylanase production, 155, 157
Tissue engineering, γ-PGA in, 435
“Total solids” (TS), 280
Trace metals, in acid production, 388
Transport costs, for energy crops, 73
Triacylglycerols (TAGs), from microalgae, 83
Tricarboxylic acid (TCA) cycle, in carboxylic acid biosynthesis, 379, 379–380, 381

United Nations Environment Programme (UNEP), 194

Vaccines, γ-PGA in, 435
Valeric acid, PHA formed on, 419
Van Soest Test, 280
Vegetable oil feedstocks, fatty acids in, 213, 213–214
Vegetable oils
biofuel use of, 47
composition of, 49
Vegetable processing, by-products of, 441
Veratryl alcohol, LiP-catalyzed oxidation of
Versatile peroxidase, in lignin degradation, 168, 169
Vitamins, affected by fermentation, 389

Waste oils, 222, 223–224
Waste residues, in ethanol production, 194
Wastes
for amylase production, 121
biogas from, 289, 289–290
biorefining of food processing, 1
from commercial food processing, 446
cooking oil, 222, 223–224
deprocessing by-products, 441–442
antioxidants, 443–445, 444
dietary fiber, 442, 442–443
food colorants, 445–446
incineration of, 280
municipal solid waste, 286, 289, 289–290, 290

Water
biophotolysis of, 264, 264, 265
as source of fuel contamination, 219
Waste recycling, in biorefinery industry, 18
Wet-milling processes
in corn biorefineries, 3, 3
in ethanol production, 41, 42
Wheat
characteristics and properties of, 33, 33
chemical composition of, 32, 32
Wheat crops, 34
agricultural practices, 38, 39
agronomic traits, 38, 39
utilization of, 35

world distribution of, 28, 28
world production of, 28, 29
Wheat flour, 35
Whey protein, in propionic acid production, 337
White-rot fungi, in wastewater treatment, 181–182
Willow (Salix spp.), as energy crop, 65, 71–72
Wine industry, laccases used in, 182–183
WoLF PSORT algorithms, 382
Wood-Ljungdahl pathway, 12
in acetic acid production, 352–355, 353
growth of homoacetogens via, 360
Wood-Werkman cycle, 333
Woody biomass, 2
Woody crops, as energy resource, 64, 65, 71–72

Xylan, chemical structure of, 147–148, 148
Xylanases, 147, 150, 151
applications for
bioethanol production, 156
cereal-based, 158
in pulp and paper biotechnology, 159
retting of flax, 159–160
textiles, 159
xylol-oligosaccharides production, 158–159
biochemical characteristics of
catalytic mechanisms, 149
catalytic properties, 150, 151
chemical structure of xylan, 147–148, 148
crystal structure, 149, 149–150
source of xylanolytic enzymes, 148–149
xylanase inhibitors, 150–152
heterologous expression of, 157
production of, 152, 152
cloning with suitable hosts, 155
induction by carbon source, 153–154
mode of fermentation, 153
S. cerevisiae in, 155–156
selection of hyperproducer, 152–153
statistical methods, 154–155
Xylo-oligosaccharides (XO)
branched, 158–159
linear, 158

Yellow greases, as alternative feedstock, 222, 224
