  M-Mode evaluation, 201–6
  M-mode evaluation of, 201–6
  parameters, 386
  PDA, 453
  Spectral Doppler evaluation, 209–16
  Tissue Doppler evaluation, 216–17
  Two-dimensional measurement, 206–9
Systolic left ventricular pressure, 229–30
Systolic right ventricular pressure, 230–31
Systolic time intervals (STI), 186–87, 187f, 190, 204–6,
  213
  afterload effects, 204t
  in cardiac diseases, 205, 205t
  heart rate, 204t
  normal heart
    LVET, 204
    PEP in, 204
  preload effects, 204t
Systolic volume index, 392f
  calculation, 209, 392f
  dogs, 283
  normal, 282
Tachycardia-induced cardiomyopathy, 222
TASPE. See Tricuspid annular plane systolic
  excursion
Taurine deficiency, 381
TDI. See Tissue Doppler imaging
  Teicholz equation, 203
  Tei index (MPI), 213, 213f, 215, 349, 396
Temporal artifact, 30, 116
Temporal resolution, 13–14
Tetralogy of Fallot, 517–20
hypoplasia of pulmonary artery, 518, 519f
VSD, 519, 520
TGC levers. See Time gain compensation levers
Thoroughbred cross horses, M-mode measurements, 562
Thoroughbred horses
M-mode measurements, 562
M-mode reference ranges, 564
Two-dimensional reference ranges, 564
Threshold priority, 114, 116f
Thromboembolic events (PTE), 247–48
Thrombus, 431
HCM, 376–77, 377f, 378f
in pericardial space, 278, 278f, 279f
Time gain compensation levers (TGC levers), 93, 95, 95f
Time-to-peak flow (TTP flow), 187, 187f
Time velocity integral (TVI), 210
Tipped four chamber views, large/small animals, 58, 60f
Tipped left parasternal four chamber view, horse
heart, 85f
Tipped long-axis views, 116–17, 121f
Tipped views, 49, 49f, 54
Tissue
acoustical impedance, 7t
half-power distances, 9t
sound and, 5, 6f
speed of sound, 19
Tissue density
DCM, 395
sound and, 5, 6f
Tissue Doppler imaging (TDI), 3, 15, 26–29, 146, 148, 195
assessment of, 193, 195–96
DCM, 389–90
diastolic function, 373–76
HCM, 375
hypertension, 355–56
imaging plane used, 148–49, 148f
measurement of, 193
myocardial performance index, 214, 214f
parameters, HCM, 373–74, 373t, 374t
pulmonary hypertension and, 348–49
restrictive cardiomyopathy, 399
systolic function, 216–17
Tissue Doppler time intervals, myocardial function
and, 216–17, 216f
Tissue harmonic imaging, 9
Total stroke volume, 317
Total systolic time (QVAC), 388
Total velocity range, baseline and, 16, 18f
Toxins, 381
Transducer. See also High-frequency transducers;
Linear array transducers; Low-frequency transducer;
Transducer frequency
dropping, 50f
lifting/dropping, 43–44, 44f
pointing, 43–44, 44f
reference marks, 42, 42f, 43
resolution and, 9–14, 10f
right parasternal-long axis images, 60f
rotating, 43, 43f
selection, 40
Transducer frequency. See also High-frequency
transducers; Low-frequency transducer
effect of, 20–21
maximum velocities, 21t
speed of sound and, 5
Transducers, resolution, 9–14
Transesophageal echocardiography
aortic regurgitation, 317
AR, 317
Transmitral E velocity, 296
Transmitral flow, 136f, 137f, 190–91, 295–96
appearance, 138, 138f
deceleration time, 391, 392f
imaging plane used, 130f, 135–36, 138
measurement, 219f
normal to restrictive physiology, 224, 224f
sample gate, 137f
small animal, 136f
velocity, 295–96
