### Index

'A-Train' satellite constellation, 244–6, 262, 307

- absorption, 9–10, 154
- absorption bands, 11, 243
- accuracy assessment, 49, 165
- acid rain, 243
- ADEOS satellite, 292–3
- ADS Mk II Airborne System, 170, 304–5
- Advanced Microwave Scanning Radiometer (AMSR-E), 222–3, 280, 292
- Advanced Microwave Temperature Sounder (AMSU), 247
- Advanced Synthetic Aperture Radar (ASAR), 130
- Advanced Very High Resolution Radiometer see AVHRR
- aerial photography
  - history, 18
  - time-series, 193
  - trade-offs, 28
- aerosol optical thickness, 119
- aerosols, effects, 242
- Africa
  - agricultural cropland expansion, 79
  - land cover changes, 79
- 'Afternoon Constellation', 244
- AGCMs, 264
- air, 241
- air pollution, 116–19
- air quality, 116
- airborne scanners, 27–8, 96–97
  - in groundwater sensing, 138
- AISA sensors, 163
- 'Aitken' nuclei, 258
- albedo, 275–6
- algal blooms, 210–13
- altimeters, 269–70, 284
- Amazon basin, gravity field changes, 139–40
- Amazonia, deforestation, 80–2
- analogue frame camera, 20
- Anderson system, 72–3, 85
- Antarctic ice sheet, mass balance, 287–8
- anthropogenic CO2, 241
- anti-science movement, 296
- AOGCMs, 264–5
- Apparent Optical Properties (AOP), 154, 157
- Aqua satellite, 33, 222–3, 245, 246
- ArcExplorer, 301–2
- ArcGIS Explorer, 300, 301
- ArcTools, 300
- ARGO array, 269
- aridity, shifts towards, 120
- assemblage classes, 178–9
- atmosphere
  - forecasting, 263
  - status, 241–3
- Atmosphere General Circulation Models (AGCMs), 249
- atmospheric correction techniques, 12
- atmospheric dust, remote sensing, 258–61
- atmospheric effects, 11–12
- Atmospheric InfraRed Sounder (AIRS), 247, 266
- atmospheric models, 263–5
- atmospheric remote sensing, 243–4
- atmospheric temperature, remote sensing, 246–9
- atmospheric window, 115
- attenuation, 152
- Automatic Picture Transmission (APT) mode, 215–16
- AVHRR
  - in atmospheric dust measurements, 259–60
  - NOAA satellites with, 32, 115
- AVIRIS, 71
- Ayles ice shelf, 286
- backscatter, 171
- bathymetry
  - image-derived, 167–8
  - inland waters, 131–2
  - LiDARs in, 132, 168–70, 172, 174, 196–200
- beach topography mapping, 193–6
- biogeochemical cycling, 293
- biomass, wetlands, 86–7
- bit, 40
- Blackwater National Wildlife Refuge, 200–2
- bleaching, 180–2
- Bodélé Depression, 261
- boreal ecosystems, 293
- Bragg scattering, 192
- brightness, 136
- buoys, 231–2
- butterfly effect, 263
- byte, 40
- calibration, 209
- CALIPSO satellite, 244, 245, 246, 262
- Canning Basin, 142–3
- canopy structure, measurement, 68–9
- carbon cycling, 206
carbon dioxide
  atmospheric concentration, 2, 255
  column abundance, 253–4
  and fossil fuel burning, 255–6, 313
  ocean absorption, 256–7
  and sea rise and fall, 273
Caribbean, dust from Africa, 259
Case 1 waters, 152
Case 2 waters, 152
CASI, 96, 161–4, 167, 304
Centre for Climate Change Communication (4C), 297
change detection, digital, 50–6
chaos theory, 263
Charge Coupled Device (CCD) arrays, 21, 22
Compact Airborne Spectrographic Imager (CASI), 96, 161–4, 167, 304
Compact High Resolution Imaging Spectrometer (CHRIS), 71
condensation, 258
Congo Basin, deforestation, 79
contrast manipulation, 43
contrast stretching, 43–4
Coral Bleaching Virtual Station Program, 215
coral carpets, 170
Coral Ecosystem Classification Scheme, 178
Coral Reef Watch, 215
coral reefs, 142–83
  assemblage classes, 178–9
  as carbon sink, 142–3
  change detection, 180–2
  as climate change ‘dip-stick’, 144
  composition, 142
  extinction events, 142, 143, 242
  image-derived bathymetry, 167–8
  LiDAR surveys, 168–70
  mapping, 195–6, 304–5, 311
  passive optical sensing, 159–64
  radar applications, 177–8
  reflectance signatures of reef substrata, 156–9
climate change
  as defining issue of our time, 312
  future effects, 312–15
  and precipitation distribution, 77
  radiative forcing and, 242–3
  as threat to urbanization, 120–21

total internal reflection, 149
Total Ozone Mapping Spectrometer
(TOMS), 118, 250, 252, 261
total suspended sediments (TSS), 212
trade winds, 217, 218, 219
training sites, 46
transmission, 9–10
tree cover, mapping, 76
Tropical Rainfall Measuring Mission
(TRMM), 137, 267–8
troposphere, 248, 249
turbid water, 124
turbidity, indicators, 212
UAVSAR, 284
UK-DMC2 satellite, 68
uncertainty, modelling, 62
United Arab Emirates, Gulf coast, 51
unmanned aerial vehicles (UAVs), 284
Upper Mississippi River Basin
flooding, 130
urban canyon effect, 115
urban climatology, 114–16
urban heat island (UHI), 114, 115
urban land cover classification, 108–11
urban remote sensing, 93–104
high-resolution satellite systems in, 95
LiDAR, 99–100
stereo imaging, 98–9
Synthetic Aperture Radar (SAR),
100–4
three-dimensional urban model
generation, 98
urbanization, 91–3
climate change as threat to, 120–1
climate change effects, 82
US Integrated Earth Observation
System, 34–5
USGS land use and land cover
classification system, 72–3, 85
UV absorption, 249
validation, 209
VEGA 2000 dataset, 75
vegetation
biophysical properties and
processes, 68–71
emergent electromagnetic spectrum, 63–4
global mapping programmes, 73–6
remote sensing as global change
monitor, 77
vegetation-impervious surface-soil
(V-I-S) model, 114
vegetation indices, 54–6, 64–8, 74–5
in wetlands remote sensing, 87
VGT sensor, 75
visible (VIS) region, 8, 18–19
visualization of spatial
distributions, 61
visualization tools, 300–1
volcanic eruptions, 89, 241
Ward Hunt ice shelf, 286
WASI, 155
water, absorption spectrum, 64
water quality levels, 212
water types, 152–3
watershed maps, regional-scale, 132–5
wavelength, 7
waves
coastal, 191–2
ocean, 231–2
wetlands
biomass, 86–7
classification, 85, 311
climate change effects, 82
definition, 83
remote sensing of change, 82–7
species and inundation levels, 85–6
and storm surges, 189–91
types, 83
whisk-broom scanner, 19
wildfires, 87–9
Wilkins ice shelf, 288–90
Wisconsin glaciation, 273
World Wind, 308
WorldView-1 satellite, 31, 97
WorldView-2 satellite, 31, 97, 305
multispectral bands, 67
orbit, 68
Yale F&ES Project in Climate Change,
297
Younger Dryas, 277
zooxanthellae, 180–1
