</table>
Anthropometrics and growth assessment
focused assessment: infants, 8
focused assessment: school-age children, 15
focused assessment: toddlers, 11
Antiepileptic drug-nutrient interactions, 103t–107t
Antiseizure medications, labs in pediatric assessment and, 6
Aortic stenosis, 159t
Aortic compression, latch, suck and, 34
Areolar grasp, latch, suck and, 33–34
Arginase deficiency (ARG), prevalence and symptoms of, 78t
Arginine supplementation, urea cycle disorders and, 78
Arginosuccinate lyase deficiency (arginosuccinic aciduria), prevalence and symptoms of, 78t
Arginosuccinate synthase deficiency, prevalence and symptoms of, 78t
Arm area, calculating, 4
Arm circumference percentiles (in mm), 27t
Arm fat area calculating, 4
percentiles females, 29t males, 28t
Arm muscle and fat stores adolescents and, measuring, 20
to 12 months, measuring, 4
Arm muscle area calculating, 4
percentiles females, 29t males, 28t
Ascending aspiration
BPD/CLD and, 117
gastroesophageal reflux and, 39
Ascites and portal hypertension clinical definition of, 72
diagnosis of, 72
nutritional algorithm for, 71
nutritional implications with, 72
pearls related to, 72
Ascorbic acid, total parenteral nutrition and, 143t
ASD. See Atrial septal defect
Asians, cystic fibrosis and, 119
ASL. See Arginosuccinate lyase deficiency
Aspiration. See also Swallowing disorder and aspiration
ascending, 39
chronic, causes of, 38
descending, preventing, 39–40
frank, 38
ASS. See Arginosuccinate synthase deficiency
Asthma, 121–122
clinical definition of, 122
diagnosis of, 122
food allergies and, 50
growth and bone health and, 122
nutritional algorithm for, 121
nutritional implications with, 122
obesity and, 122
pearls related to, 122
Atonic seizures, ketogenic diet therapy plan for, 108–110
Atrial septal defect, 159t
Bard Button, 138t
Barlow classification, body mass index, 2
Basal energy expenditure, 7
Basal metabolic rate energy needs in adolescents and, 18
for toddlers, 13
Basal metabolic rate x factor, 7
Batten disease, enteral nutrition and, 136t
BCCA metabolism. See Branched-chain amino acid metabolism
BEE. See Basal energy expenditure
Beneprotein, 137
Benzodiazepines, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 107t
Beriberi, thiamine deficiency and, 53t
Biotin, total parenteral nutrition and, 143t
Birth defects, enteral nutrition and, 135t
Blood glucose elevations, signs and symptoms of, 62
Blood urea nitrogen chronic kidney disease and, 98
hypertension and, 100
nephrotic syndrome and, 95
TPN monitoring guidelines and, 144t
BMI. See Body mass index
BMR. See Basal metabolic rate
Body image, focused assessment: adolescents, 20
Body mass index for adolescents, 19
asthma and, 122
hypertension and, 100
overweight/obesity and, 113
2–20 years, in kg/m², measuring for undernutrition and obesity, 2
Bone health
asthma and, 122
cystic fibrosis and, 120

Bottle feeding
breast milk supply undermined by, 32
loss of milk supply and, 36
slow-flow nipples and, 33

Boys
expected gain in length: birth to 24 months, 25t
expected weight gain in: birth to 24 months, 24t

BPD/CLD. See Bronchopulmonary dysplasia/chronic lung disease

Brain tumors, factors affecting nutritional status and, 125

Branched-chain amino acid metabolism, 80

Breast emptying, successful breast-feeding and, 31

Breast feeding. See also Failure to gain weight breast-feeding; Lactation beyond infancy, 13
bronnchopulmonary dysplasia/chronic lung disease and, 116
post-operative, 151
successful, keys to, 36

Breast-feeding infants, current intake, general pediatric nutrition assessment, 6

Breast milk
calorically enhanced, bronchopulmonary dysplasia/chronic lung disease and, 116
underweight infants and, 10

Breast pumps, 35

Breast reductions, primary failure of lactogenesis and, 35

Bright Beginnings, 137

Bronchopulmonary dysplasia, enteral nutrition and, 135t
Bronchopulmonary dysplasia/chronic lung disease
clinical definition of, 116
diagnosis of, 116
nutritional algorithm for, 115
nutritional implications with, 116
pearls related to, 116–117
BUN. See Blood urea nitrogen
Burkitt's lymphoma, factors affecting nutritional status and, 124t

CACT. See Carnitine acylcarnitine translocase deficiency

Calcium
adolescent eating patterns and, 19
asthma and, 122
Crohn's disease and deficiency of, 66
focused assessment: adolescents and, 21
kidney transplant and, 100
nephrotic syndrome and, 96
rheumatic disease and, 163
total parenteral nutrition and, 142t
ulcerative colitis and supplementation with, 68
Calibrated scale, weight on, 1
Calorie intake, boosting in underweight infants, 10

Calories, BPD/CLD and, 117
Cancer, 123–126

nutrition algorithm for, 123
nutritional implications for, 124, 124t–125t
nutrition intervention goals with, 125
pearls related to, 126

Cancer treatment chemotherapy, common side effects with, 126

Carbamazepine, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 104t

Carbohydrate metabolism defects
galactosemia, nutritional algorithm for, 81
glycogen storage disease, nutritional algorithm for, 83
hereditary fructose intolerance, nutritional algorithm for, 85

Carbohydrates, total parenteral nutrition and, 141, 141t

Carbonyl phosphate synthase deficiency, prevalence and symptoms of, 77t

Cardiac disease, factors contributing to malnutrition with, 159t
Cardiology, 157–160
congenital heart disease, 158–160

Cardiomyopathy
metabolic disorders and, 160
selenium deficiency and, 60t

Carnitine acylcarnitine translocase deficiency, nutritional interventions for, 90t
Carnitine palmitoyl transferase 1 deficiency, nutritional interventions for, 90t
Carnitine palmitoyl transferase 2 deficiency, nutritional interventions for, 90t

Catch-up growth, in school-age children, 16
Caucasians, cystic fibrosis and, 119
CAVC. See Complete atrioventricular canal
CBC. See Complete blood count
Centers for Disease Control and Prevention (CDC) growth charts
occipital frontal circumference, 3
overweight/obesity and, 113
plotting weight-for-length on, 2
plotting weight on, 1
Cerebral palsy, growth chart for, 3
Cesarean delivery, nonelective, primary failure of lactogenesis and, 35
CF. See Cystic fibrosis
Charlie Foundation, 110
Chemotherapy
common side effects with, 126
malnutrition during, 124
nephrotoxicity and, 125
Chloride, total parenteral nutrition and, 142f
Choking hazards, for toddlers, 14f
Cholestasis, TPN and, managing, 145f
Chromium, TPN monitoring guidelines and, 144f
Chronic bowel inflammation, ulcerative colitis and, 68
Chronic kidney disease
clinical definition of, 98
diagnosis of, 98
nutritional algorithm for, 97
nutritional implications with, 98
pearls related to, 98
Chronic lung disease, clinical definition of, 116
Chylothorax
clinical definition of, 154
diagnosis of, 154
nutritional algorithm for, 153
nutritional implications with, 154
pearls related to, 154
Cisplatin, nephrotoxicity and, 125
Citulline, for CPS deficiency, 78
CKD. See Chronic kidney disease
CLD. See Chronic lung disease
Clinical evaluation
general pediatric nutrition assessment, 4–5
symptoms and deficiencies, 4–5f
Clobazam, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 107f
Clorazepate, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 107f
CMP. See Cow milk protein allergy
Coarctation of aorta, 159f
Cobalamin (vitamin B12), pearls, deficiency symptoms, toxicity symptoms, and laboratory tests, 56f
Communication, with adolescents about nutrition intervention, 21–22
Compleat Pediatric, 137
Complementary foods, initiating, focused assessment: infants, 9
Complementary medicine, general pediatric nutrition assessment, 6
Complete atrioventricular canal, 159f
Complete blood count, 95
Congenital heart disease
acyanotic vs. cyanotic, 159f
clinical definition of, 159
diagnosis of, 159
nutritional algorithm for, 158
nutritional implications with, 159
pearls related to, 160
Constipation, neurodevelopmental delay and, 129
Copper
Crohn’s disease and deficiency of, 66
pearls, deficiency symptoms, toxicity symptoms, and laboratory tests, 59f
TPN monitoring guidelines and, 144f
zinc toxicity and deficiency of, 60f
Cornstarch-based powdered thickeners, preventing descending aspiration with, pros/cons, 39
Corpak, 137f
Corticosteroids, rheumatic disease and, nutrition implications, 164
Cow milk protein allergy
clinical definition of, 46
diagnosis of, 46
nutritional algorithm for, 45
nutritional implications for, 46
pearls related to, 46
C-peptide levels, type 1 and type 2 diabetes and, 62
CPT 1. See Carnitine palmitoyl transferase 1 deficiency
CPT 2. See Carnitine palmitoyl transferase 2 deficiency
Cradle hold, latch, suck and, 33
C-reactive protein, general pediatric nutrition laboratory assessment, 5
Creatinine, TPN monitoring guidelines and, 144
Crohn’s disease
clinical definition for, 66
diagnosis of, 66
enteral nutrition and, 136
nutritional algorithm for, 65
nutritional implications with, 66
pearls related to, 66
zinc deficiency and, 60
CRP. See C-reactive protein
CRRT, TPN modifications during, 146
Cup feeding, milk administered to infant with, 33
Cyanocobalamin, total parenteral nutrition and, 143
Cyclinex-1, 78
Cystic fibrosis
clinical definition of, 119
diagnosis of, 119
enteral nutrition and, 135, 136
nutritional algorithm for, 118
nutritional implication with, 119
pearls related to, 119–120
Cystic Fibrosis Foundation, 120
DASH diet, hypertension and, 100, 101
 Decompensation, know early signs of, metabolic disorders and, 90
Depacon, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 105
Depakene, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 105
Depakote, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 105
Depression, obesity and, 113
Descending aspiration
BPD/CLD and, 117
enteral nutrition and, 135
preventing, 39–40
Diabetes, primary failure of lactogenesis and, 35
Diabetes mellitus
blood glucose elevation, signs and symptoms of, 62
diagnostic parameters, 62
pearls related to, 62
type 1, 61–64
clinical definition, 61
diagnosis of, 61
diagnostic parameters for, 62
nutritional implications, 61–62
nutrition guidelines for, 62–63
type 2, 61–64
clinical definition, 61
diagnosis of, 61
nutritional implications, 61–62
nutrition guidelines for, 63–64
obesity and, 113
Dialysis patients, vitamin supplements for, 98
Diarrhea. See also Toddler’s diarrhea
cancer treatment chemotherapy and, 125
Crohn’s disease and, 66
food allergies and, 50
neurodevelopmental delay and, 129
zinc deficiency and, 60
Diazepam, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 107
Dietary assessment, focused assessment: infants, 8–10
Dietary evaluation
focused assessment: adolescents, 20
general pediatric nutrition assessment, 6
complementary medicine, 6
current intake, 6
feeding problem history, 6
food allergies, 6
nutrient needs, estimating, 7
nutrient supplements, 6
physical activity, 6
special diets, 6
Dietary Reference Intake
cystic fibrosis and, 120
vitamins and minerals
for adolescents, 18
general pediatric nutrition assessment, 7
Diet history, focused assessment: school-age children, 15–16
Dieting, adolescents and, 17
Diet intolerance, ketogenic diet therapy plan and, 109
Digital scale, weight on, 1
Dilantin, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 104t
Diuretics, micronutrient loss and, 117
DNA testing, CF newborn screening and, 119
Domperidone, 32
Down syndrome, growth chart for, 3
DRI. See Dietary Reference Intake
Drug use, adolescents, nutrient needs and, 18
Duocal, 137
Dyslipidemia, AHA Therapeutic Lifestyle Changes diet and, 63
Dysphagia
diet, various forms of, 40
enteral nutrition and, 135t
eosinophilic esophagitis and, 47
GERD and, 42
EAA supplement, 78
Eating behavior assessment
focused assessment: toddlers, 11–13
breast-feeding beyond infancy, 13
contributors to inadequate nutrient intake, 12
eating behavior history, 12t
inadequate intake, 13
portion sizes, age 1–3 years, 13t
solid/fluid intake, imbalanced, 12
three-day food record, 12
Eating behavior characteristics, focused assessment: school-age children, 15
Eating behavior history, focused assessment: infants, 8
Eating disorders, adolescents and, 17
EBM. See Expressed breast milk
Ebstein anomaly, 159t
ECLS. See Extracorporeal life support
ECMO. See Extracorporeal membrane oxygenation
Ectomorph, 20
Edema, nephrotic syndrome and, 95, 96
EEAs. See Essential amino acids
EER. See Estimated energy requirement
Egg allergies, outgrowing, 51
EleCare, 137
Electrolytes
BPD/CLD and, 117
TPN and, 142, 142t
monitoring guidelines, 144t
Endocrine, type 1 and 2 diabetes mellitus, 61–64
Endomorph, 20
Energy requirements
for adolescents, nutrition needs and, 18
focused assessment: infants, 10
general pediatric nutrition assessment, 7
total parenteral nutrition and, 141, 141t
Enfamil Premature, 136
Enteral nutrition
delivery method, pump or no, infusion schedule and comments, 138t
discharging patient on tube feeding, 140
extracorporeal membrane oxygenation and, 156
extra water and, 139
indications/associated conditions, 135t–136t
initiation of feeds: infants, children under 5 years, and over 5 years, 139
length of therapy, route, tube type/size, 137t–138t
monitoring, 139
Seattle Children’s Enteral Formulary, 136–138
children over 10 years, 137
children 1–10 years, 137
infants, 137
modular products, 137
premature, 136
specialty products, 137
timing intervention with, 136
transition to oral feeds, 140
Eosinophilic gastroenteritis, enteral nutrition and, 136t
Eosinophilic esophagitis
clinical definition of, 47
diagnosis of, 48
nutritional algorithm for, 47
nutritional implications of, 48
pearls related to, 48
Epilepsy, ketogenic diet therapy plan for, 108–110
Epilepsy Foundation of America, 110
Erythrocyte thiamine transketolase, 53t
Essential amino acids, 78
Essential fatty acid deficiency, TPN and, managing, 145t
Estimated energy requirement, 7
Ethosuximide, mechanism of action,
drug-nutrient interactions, nutrition intervention, and lab monitoring, 106t
ETKA. See Erythrocyte thiamine transketolase

Exercise
adolescents, fluid intake and, 19
hypertension and, 101

Expressed breast milk, limiting fortification of, post-operative nutrition and, 150

Extracorporeal life support, 156

Extracorporeal membrane oxygenation
clinical definition of, 156
nutritional algorithm for patients on, 155
nutritional implications with, 156
pearls related to, 156
TPN modifications during, 146t

Eyes, symptoms and deficiencies, general pediatric nutrition assessment, 5t

Failure to gain weight breast-feeding diagnosis of, 30
nutritional algorithm for, 30
nutritional implications with, 31
pearls related to, 31

Failure to thrive
clinical definition for, 29
diagnosis of, 29
enteral nutrition and, 135t
GA-1 and, 93
nutritional algorithm for, in asymptomatic child, 28
nutritional implications with, 29
pearls related to, 29

Fasting, avoiding with glycogen storage disease, 84

Fat requirements, total parenteral nutrition and, 141, 141t

Fatty acid oxidation disorders
clinical definition of, 89
diagnosis of, 89
enzyme missing, plasma acylcarnitine analysis and nutrition interventions for, 89t–90t
nutritional algorithm for, 88
nutritional implications with, 89
pearls related to, 90

Feedback inhibitor of lactation, 31

Feeding capabilities for age, expected, focused assessment: infants, 9t

Feeding infants in NICU
nutritional algorithm for, 132
pearls related to, 133
fluids, 133
nutrition support, 133–134

Feeding intolerance, infants in NICU and, 134

Feeding problem history, general pediatric nutrition assessment, 6

Felbamate, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 105t

Felbatol, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 105t

Female athlete triad, adolescents, nutrient needs and, 17

Females. See also Girls
arm circumference percentiles (in mm), 27t
arm fat area, percentiles, 29t
arm muscle area, percentiles, 29t
energy needs and onset of puberty in, 18
triceps skinfold percentiles (in mm), 26t–27t

Fenugreek, milk synthesis and, side effects, 32

Ferritin, general pediatric nutrition laboratory assessment, 5

FIL. See Feedback inhibitor of lactation

Finger feeding, milk administered to infant with, 33

Fluids
for adolescent athletes, 19
focused assessment: infants, 10
general pediatric nutrition assessment, 7
for infants in NICU, 133
total parenteral nutrition and, 141

Fluoride supplementations, focused assessment: infants, 8

Focused assessment: adolescents, 17–22
assessment, 19–21
laboratory, 21
patient and family interview, 20–21
physical parameters, 19–20

Index

Vitamin K
- cystic fibrosis and malabsorption of, 120
- pearls, deficiency symptoms, toxicity symptoms, and laboratory tests, 58t
- total parenteral nutrition and, 143t

Vitamins
- adolescents and, 18–19
- CF-specific, 120
- DRI, general pediatric nutrition assessment and, 7
- general pediatric nutrition laboratory assessment and, 5
- pearls, deficiency symptoms, toxicity symptoms, and laboratory tests, 53t–60t
- TPN and, 142, 142t–143t
- Vivonex Pediatric, 137
- Vivonex T.E.N., 137
- VLCADD. See Very-long-chain acyl-CoA dehydrogenase deficiency

Vomiting
- cancer treatment chemotherapy and, 125
- food allergies and, 50
- zinc deficiency and, 60t

VSD. See Ventricular septal defect

Water intake
- adolescents and, 19
- excessive, inadequate nutrient intake in toddlers, 12
- Waterlow classification, height-for-age, 2

Weight
- for adolescents, 19
- general pediatric nutrition assessment, 1
- Weightbearing exercise, rheumatic disease and, 163
- Weight-for-age, 1
- Weight-for-length, up to 36 months, measuring, 2
- Weight gain
  - expected: age 2–10 years, 3
  - expected: birth to 24 months, 24t–25t
  - focused assessment: toddlers, 15
  - in school-age children, expected rate of, 15

Weight history, focused assessment:
- adolescents, 20

Weight loss, blood glucose elevations and, 62

Wernicke encephalopathy, thiamine deficiency and, 53t

WHO. See World Health Organization

WIC. See Women, Infants, and Children

Williams syndrome, growth chart for, 3

Wilms tumor, factors affecting nutritional status and, 124t

Wilson disease, copper deficiency and, 59t

WND-1, 78

WND-2, 78

Women, Infants, and Children (Nutritional Program), 8, 10

World Health Organization, basal metabolic rate x factor, 7t

Xerophthalmia, vitamin A deficiency and, 57t

X Leu, 93

X Lys S Trp, 93

Zarontin, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 106t

Zemplar, chronic kidney disease and, 98

Zinc
- Crohn’s disease and deficiency of, 66
- general pediatric nutrition laboratory assessment and, 5
- pearls, deficiency symptoms, toxicity symptoms, and laboratory tests, 60t
- TPN monitoring guidelines and, 144t

Zonegran, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 105t

Zonisamide, mechanism of action, drug-nutrient interactions, nutrition intervention, and lab monitoring, 105t
