subgrades 263, 264, 265–270, 289
subgrade surface modulus 292–293
superelevation 236–239
Surface Condition Assessment of the National Network of Roads (SCANNER) 319
surface courses 264, 289, 303
surface dressing 279–280, 328, 331
surface texture 319–320
surfacings 264–265, 288, 289
construction of bituminous 280–282
for low-speed environments 368–369
surveys 85–86
delay/queuing 88–89
journey speed and travel time 88, 91–95
origin and destination (O&D) 8, 89–90
speed 87–88, 91–95
transportation 8
vehicle 86–87
sustainable development 288, 357–358
sustainable transport planning
aspirations for urban areas 360–361
carriageway surfaces 368–369
carriageway widths 366–368
cycling facilities 361, 366–376, 380–384
sustainable transport planning (cont’d)
  forward visibility 370–371
  four pillars of 358–360
  junction design 369–370
  levels of service (LOS) approach 374–392
  parking policies 392–395
  pedestrian facilities 361, 364–366, 369, 374–380
  public transport 7, 344, 361, 371–373, 385–392
  street design 361–364

TA (transport assessments) 335–341
T-charts 56–57
terrain classification 125, 139
time mean speed 87–88
time savings 58
T-junctions see priority intersections
toll charges 2, 3, 6–7, 68–70
total lateral clearance adjustment factors 137, 138
TRACS (traffic-speed condition surveys) 318–319
traffic analysis 85
delay/queueing surveys 88–89
flow–density relationship 98–99
headway distributions 103–109
moving observer method 91–95
origin and destination (O&D) surveys 8, 89–90
queueing analysis 109–118
speed–density relationship 96–98
speed–flow relationship 99–103
speed surveys 87–88, 91–95
stationary observer method 91
survey types and purpose 85–86
traffic density 96–99
traffic flow 96
travel time surveys 91–95
vehicle surveys 86–87
Traffic Appraisal Manual 171
traffic assignment 8–9, 40–45, 51
traffic demand analysis see transport demand modelling
traffic density 96–99
traffic flow 96
traffic growth, factors influencing 2, 4–6
traffic growth forecasts 160–161
traffic loading 270–275
traffic signals see signalised intersections
traffic-speed condition surveys (TRACS) 318–319
transition curves 243–248

transport assessments (TAs) 335–341
transportation planning see planning process
transportation studies 4, 7–9
transportation surveys 8
transport demand modelling 8–9, 16–19
land-use models 19–20
modal split 35–40, 49–51
traffic assignment 40–45, 51
trip distribution 24–35, 47–49, 340
trip generation 20–24, 46–47, 339–340
worked example 46–51
transverse joints 283–284, 313
TRANSYT computer program 217–218
travel data 4–6
travel plans 341–346
travel time surveys 91–95
tried-and-tested designs 56–57
trip distribution 8–9, 24–25, 340
  Furness method 31–35
  gravity model 25–30, 47–49
  growth factor models 30–31
  trip generation 8–9, 20–24, 46–47, 339–340
  trip parameters 16
  trip utility 16–17, 35–36
two-lane highways, HCM classification 142
uncontrolled intersections 369
uninterrupted flow highways 134
US Federal Highway Administration 2
unreinforced concrete (URC) 283, 307, 309, 311–313
urban roads and streets
capacities 162–165
design speed 226, 362–364
dimensions 220–221, 221, 222, 223, 224, 225
see also sustainable transport planning
URC (unreinforced concrete) 283, 307, 309, 311–313
user benefits 57–59
utilisation ratio 113
utility of a trip 16–17, 35–36
value for money classifications 83
vehicle-operating cost (VOC) reductions 58
vehicle surveys 86–87
verges 221–222, 365
vertical alignment 184, 248–261
VISI (harmonic mean visibility) 227–228
