Index

Note: Page numbers in italics refer to Figures and those in bold to Tables.

2 glyceril monopalmitate, 17
Alfa-linolenic acid, 25, 26, 27
Alfa-tocopherol, 29
Aglicones (of oleuropein and ligstroside), 30, 72
Almond (flavour), 47
ANOVA, analysis of variance, 44, 45
Antioxidants, 28–31
Apple (flavour), 43, 47
Artichoke (flavour), 43, 47
Astringency, 43, 55
Audit and system review, 215, 218
Authenticity standards, 19, 17, 18
Autocatalytic degradation (of olive oil), 107, 108

Bag-in-box containers and dispensers, 189
Bar graph, 45
Beta-sitosterol, 18, 29
Bins, 109
Bitterness or bitter, 43
Bleaching, 207
Blending, 182
Boiling point, 356
Bottles (see glass bottles)
Break Even Point, BEP, 305–6
BRC standards, 259
Brine (sensory effect), 40
By-product and waste management, 283–95

Camomile (flavour), 47
Carbon footprint, 342

Centrifugal pump, 172–4, 173
Centrifugal separation: 139–54
three-phase process, 140, 141, 144
two-phase process, 142, 143, 144
Certification, 251–61
first-party certification, 251–2
second-party certification, 252
third party certification, 253–7
certification standards, 256, 258–9
certification systems, 257–9
certification procedure, 260
Certified olive trees, 67
Chain (see olive oil chain)
Chemical formulas:
structural, 22
skeletal, 23
spatial (or stereochemical), 71–2
Cis-fatty acids, 24, 25, 26
Citrus (flavour), 43, 47
Classification of olive oils, 5, 6
Closing (glass bottles), 193, 194
Coalescence, 128, 130
Colour (of extra virgin olive oil), 31
Combs (also: oscillating combs, vibrating combs), 93, 99
Communication, 181, 335–7
Composting, 293–4
Concentration units, 352
Contaminants (also: biological, chemical and physical hazards), 75–85
Conversion tables:
physical quantities, 349, 350
temperature, 355, 356
Convenience, 180
Co-packaging, 181–2
Cost analysis: 303–19
  cost of cultivation and harvesting, 310–313
  cost of milling, 313–15
  cost of storage and bottling, 315–17
Crates, 109
Cucumber (sensory defect), 40
Culinary uses (of olive oil): 321–37
  olive oil as a preservation agent, 326–7
  olive oil as a cooking medium, 327–9
  olive oil as an integral ingredient, 329–30
  olive oil as a condiment, 330–332
  olive oil-food pairings, 333–34
Cultivars: 59
  classification, 60
  cultivars in various countries, 61–2
  cultivar-productivity relationship, 60
  cultivar-quality relationship, 64, 66
  self-sterility and pollinators, 64, 65
Decanters, 142–8
  the classic two-phase decanter, 142, 145
  three-phase decanters for olive oil separation, 147, 147
  two-phase decanters for olive oil separation, 147, 148
LWC, Low Water Consumption, three-phase decanter, 147
  noise, 151–2
  cleaning, 153, 153
  mechanical stress, 153
Denomination of olive oils, 5, 6
Density (of olive oil), 351
Deodorizing, 208
Desolventizing, 205
Detergents (contaminants), 77, 83
Disc centrifuges: 148–50
  manual discharge, 148, 149
  self-cleaning, 150, 150
Disc mill, 122, 122
Documentation of process management systems, 217
Double bond (see unsaturated fatty acids),

Eary (sensory defect), 40
ECN42, 18
Education of (and communication to) consumers, 335–7
Energy recovery (from pomace), 291, 294–5
EPD, environmental product declaration, 344
Erythrol (and uvaol), 17
Essential Fatty Acids (EFA), 26–7
Excellence in extra virgin olive oil: 226–9
  basic requirements, 226, 227
  sensory style, 226
  effective process management, 227
  the quality-proximity matrix, 227, 228
Excellent extra-virgin olive oil (culinary uses), 324–6
Eucalyptus (flavour), 47
Fatty acids: 21–7
  % distribution in olive oil, 358
Fig leaf (flavour), 47
Filling (glass bottles), 191–3, 192
Filtration (of extra virgin olive oil): 155–64
  principles, 156–8
  filtration cycles, 158
  filter media, 159
  filtration equipment, 159–60
  filtration systems, 160–163
Flowers (flavour), 47
Free acidity, 13–14
Frostbitten olives (sensory defect), 40
Fruitiness or fruity, 41
Frying, 327–8, 357
Fungicide residues, 77, 79
Fusty-muddy (sensory defect), 40

Gear pump, 174
Glass bottles, 185–7, 190
Gravity filling, 192
Grasy (or grass), 43, 47
Greasy (sensory defect), 40
Green olive (or green or green fruit), 43, 47
Green pepper (flavour), 47
Grubby (sensory defect), 40
Gustatory sensations, 47

HACCP (see Hygiene Management System, HMS)
Hagen-Poiseuille equation, 157
Hammer mills, 119–22
Hand-held harvesting machines, 92–5
INDEX

Hand picking, 91, 99
Harvesting batches, 246
Harvesting systems, 91–100
Harvesting-milling link, 112
Hay-wood (sensory defect), 40
Health-promoting properties, 28–33
Heated or burnt (sensory defect), 40
Herbicide residues, 77, 79
Herbs (flavour), 47
History of the olive, 321–3
Hydroperoxides, 70
Hydrostatic pressure, 162
Hydroxytyrosol, 30, 72
Hygiene Management System, HMS, 270–275
Hygiene of the oil factory: 263–75
external environment, 265
buildings and internal environment, 265–8
control of insects and rodents, 267
plant and equipment, 268–9
personnel, 269–70
HMS manual, 273–5
Hygienic design, 276–81
ISO standards, 254–9, 340–347
Inert gas, 169, 169
nitrogen sources, 170
Insect and rodents control, 267
Interception (and collection) of olives, 96
Labelling, 194–8
Lampante oil, 6, 13, 16
LCA, Life Cycle Assessment, 337–45
Legal definition of virgin olive oils, 11
Legal quality standards: 12
chemical standards, 12, 13
sensory standards, 16, 16
Light transmittance, 186–7
Ligstroside (see oleuropein)
Linoleic acid, 25, 26, 27
Lipolysis, 13, 108
Lipoxigenase (LOX) pathway, 70, 129
Lobe pump, 175
LSD, Least Significant Difference, 44, 45
Lubricants (contaminants), 77, 83
Malaxation, 127–37
basic phenomena, 127–31
time-temperature relationship, 131–2
temperature control, 133–5
residence-time control, 135
Malaxers, 132–6
Management (see Process Management
and Risk Management System)
Mass balance (of the extra-virgin olive oil
process), 296–302
Maturity assessment, 101–5
Maturity indices:
skin and pulp color, 103
pulp firmness, 103
detachment force, 104
Mechanical damage of olives, 107–9
Mechanical stress of oil, 171
Mediterranean diet, 28
Melting point (of fatty acids), 26
Metal containers, 188–9, 190
Metallic (sensory defect), 40
Micro-organisms (contaminants), 77, 78
Migration of plastic contaminants, 188
Milling (or olive milling; also: pitting): 117–26
effects on oil quality, 119
single-grid hammer mills, 119–21
double-grid hammer mills, 120, 121–2
disc mills, 122–3
stone mills, 123–4
Milling batches, 246–7
Minor components (of extra virgin olive oil), 28–32, 359
Mono pump, 175
Monounsaturated fatty acids (MUFA), 24, 25, 26, 27
Musty-humid (sensory defect), 40
Mycotoxins, 77, 78
Negative sensory attributes (see sensory defects)
Nets, 96
Neutralization, 206, 208
Noise, 151–2
Nutritional value of triglycerides and fatty acids, 26–7, 32–3
Odour (of extra-virgin olive oil), 31
Oil-food pairing, 49–52, 333–4
Oil storage: 165–71
prevention of temperature abuse, 166–8
Oil storage: (continued)
  time-temperature relationship, 167, 168
  prevention of exposure to air, 168–70
  nitrogen sources, 170
  prevention of exposure to light, 170
  prevention of water and organic residues, 171
  prevention of exposure to contaminated environment, 171
  prevention of mechanical stress, 171

Oleic acid, 23, 27
Olfactory sensations, 47
Oleuropein (also: ligstroside) and aglycones, 30, 72
Olive cleaning: 113–16
  the separation section, 113–14
  the washing section, 114–15
Olive handling and storage: 107–12
  mechanical damage, 107–9
  time-temperature relationship, 109–11
Olive leaf (flavour), 47
Olive Mill Wastewater, OMW (see Wastewater)
Olive spoilage, 108
Olive oil chain, 7
Olive ripening (see ripening)
Omega fatty acids, 27
Oxidation (also: oxidative reactions, photoxidation, thermoxidation), 14, 69, 70

Packaging: 179–99
  primary, secondary and tertiary packaging, 179
  functions of, 180
  the packaging process: 181–5, 183
    ASAP or ALAP, 184
  the packaging materials: 185–9
    glass bottles, 185–7, 190
    metal containers, 187–8, 190
    plastic containers, 188, 190
    bag-in-box, 189
  the packaging operation, 189–98
    filling, 191–3
    closing, 193, 194
    labelling, 194–8
Packaging batches, 248
PAHs, Polycyclic Aromatic Hydrocarbons, 77, 81
Partial pitter mill, 125–6
PCBs, polychlorinated biphenils, dioxins, 77, 81
Pear (flavour), 47
PEF, product environmental footprint, 343
Peristaltic pump, 176
Peroxide value, 14
Pesticide residues, 77, 79
Phenolic compounds, 30–31
Phytosterols, 29
Pitfall, 124, 204
  total pitter mill, 124
  partial pitter mill, 125
Plastic containers, 188–9, 190
Plate filter, 160
Polar components, 32, 73
Pollinator (and cross-pollination), 64, 65
Polyunsaturated fatty acids (PUFA), 24, 25, 26, 27
Pomace drying, 204
Pomace pelleting, 204
Pomace pitting, 204
Pomace utilization: 291–5
  composition, 291
  uses (see also Chapter 17): 292
    composting, 293–4
    energy, 291, 294–5
Positive sensory attributes, 16, 37, 41
Principal Component Analysis, PCA, 46, 48
Process Management System (PMS), 213–24
  company’s policy, 215
  product requirements and control, 215, 216
  process requirements and control, 215, 216
  general control procedures: 215, 217–19
    documentation, 217
    training, 217–18
    audit and system review, 215, 218–19
  control of critical points, 220–224
  risk analysis, 221–3, 222
    an exercise, 230–242
  risk treatment, 223–4
Product Category Rules, PCRs, 344–5, 343
Pumps: 172–6
- centrifugal pump, 172–4
- gear pump, 174
- lobe pump, 175
- mono pump, 175
- peristaltic pump, 176

Pungency or pungent, 43, 55

Quality standards (see Legal Quality Standards)
Quality-proximity matrix, 227–9

Rancid (sensory defect), 40
Refined olive oil, 6, 201, 208–10
Refining (of olive oil), 201–10
- extraction of pomace oil, 202–5
- the refining process, 205–8
- the quality of refined olive oil, 208–10
Ripe olive (flavour), 43
Ripening (of olives), 90–91
Risk analysis, 221–3
- an exercise of integrated risk analysis, 230–242
Risk gravity evaluation, 221–3
Risk management system: 220–225
Risk treatment, 223–4
- risk elimination, 223
- risk prevention, 223
- reducing risk gravity, 224
- accepting risk consequences, 224
Roll-on caps (glass bottles), 194
Rough (sensory defect), 40

Scalping (in plastic containers), 188
Scorecard, 37, 44
Scraped-Surface Heat Exchangers, SSHE, 134–5
Screw caps, 193, 194
Self-cleaning disc centrifuge, 150
Self-compatibility and self-incompatibility, 64, 65
Sensory defects, 16, 37, 40
Sensory profile, 41–6, 53–6
- experimental design, 54
- sensory procedure, 54–6
Sensory performance or sensory properties, 49–52
Sensory standards, 16–17
Sensory panel, 53
Sensory terminology (or glossary), 40–41, 42, 43, 47
Sensory wheel, 42
Shaking hooks, 94
Skin (and pulp) colour, 90, 103
Smoke (contaminants), 77, 82
Smoke point, 356
Solvent extraction, 205
Solvents (contaminants, also: organic, halogenated solvents), 77, 82
Specific heat, 356
Spectrophotometric absorption, 13, 14–15
Spider plot (or polar coordinates), 45, 46
Spreading load (of wastewater), 287
Squalene, 28
Stearic acid, 22, 25, 26
Stigmastadiene, 17
Stone mill, 123–4
Storage (see olive handling and storage or oil storage)
Storage batches, 247–8
Straddle harvesters, 98–100
Suggested daily intake (of extra-virgin olive oil), 32
Super-intensive and intensive systems, 63
Sustainability, 181, Chapter 25

Tactile (or kinaesthetic) sensations, 47
Tamper evidence, 194
Tanks and piping, 176–8
Telescopic pole, 93
Third-party certification, 251–7
Three-phase decanters, 147
Time Dominance of Sensation, TDS, 50–52
Time-temperature relationship:
- in olive storage, 110
- in malaxation, 132
- in oil storage, 168
Tocopherols, 29
Tomato (flavour or tomato fruit or tomato leaf), 43, 47
Total pitter mill, 124–5
Traceability: 245–9
- harvesting batches, 246, 247
- milling batches, 246–7
- storage batches, 247–8
- packaging batches, 248
Training of staff and workers, 217–18
Trans-fatty acids, 24, 26
Trans-oleic or linoleic or linolenic fatty acids, 17
Triglycerides, 21, 23
Trunk shakers, 95, 96, 97, 99
Turbidity (of extra virgin olive oil), 159
Two-phase decanters, 142–8

Unit operations of olive oil processes, 8, 9
Unsaturated fatty acids, 23, 25

Vacuum filling, 192
Vanilla (flavour), 47
Vegetable water (sensory defect), 40
Viscosity:
as a tactile sensation, 43
as a physical property, 352–4

Walnut (flavour), 47
Wastewater: 285–91
composition, 287
spreading on soil, 285–9
physical treatments, 289–90
Water activity (in olive oil), 354–5
Water role (in phenolic compounds transformations), 71–3
Waxes, 17
Winey-vinegary (sensory defect), 40
Wrap-around umbrella, 96, 96

Yield, 8, 352, 353
