Index

B, C, D

biomechanics, 23
cortical bone, 31, 40, 53, 158, 159, 168, 170, 184
dental implant, 23, 47–49, 184–188
deterministic
design optimization (DDO), 75, 119, 186, 187
optimization (DO), 57, 60–65, 68, 74, 79, 85
topology optimization (DTO), 121, 122, 128, 134, 138–142, 144, 146, 152, 181, 182
drilling surgery, 23, 52, 56

F, H, I

Finite Element Method (FEM), 157
fixation system, 23, 47, 51, 174, 180
First Order Reliability Method (FORM), 59
fractured mandible, 23, 49, 156, 174–184
Hybrid Cellular Automata (HCA), 144
hip prosthesis, 24–42, 157–173

N, O, P

normalized
space, 62, 63, 69, 75, 77, 85, 92, 94, 96, 105, 115, 122
variable, 63, 92, 94, 96, 101, 122, 187
optimality
conditions, 2, 68, 70, 77, 82, 83, 86–89, 91–96, 98, 116, 118
criteria (OC), 123
Optimum Safety Factor (OSF), 70, 75, 91, 95, 117, 119
Performance Measurement Approach (PMA), 68, 69
prosthesis design, 153

hybrid
design space (HDS), 60, 75, 79, 80, 81, 85, 107, 110
method (HM), 79
improved
Austin-Moore stem (IAM Stem), 158
hybrid method (IHM), 60, 70, 75, 85–90, 116, 119
intervertebral disk, 23, 42–46
R, S, T

Reliability-Based Design Optimization (RBDO), 119, 122, 168
Reliability-Based Topology Optimization (RBTO), 73, 121, 125
reliability analysis, 170, 171
reliability-based topologies, 136, 138, 141, 142, 152
Reliability Index Approach (RIA), 68, 69
Safest Point (SP), 60, 70, 76, 98, 99, 105, 117, 119
shape optimization, 177, 178
Solid Isotropic Microstructure with Penalty (SIMP), 122
sizing optimization, 4–10
solids stem, 158, 159, 163–167
Second Order Reliability Method (SORM), 59
structural optimization, 57
topology optimization, 121
trabecular bone, 34, 35, 40, 159, 168
