Foreword xxv
Preface xxix

1 Optical Networking 1
  1.1 Evolution of Optical Network Architectures .......................... 1
    1.1.1 Transparent Networks ........................................ 4
    1.1.2 Opaque Networks ............................................. 6
    1.1.3 Translucent Networks ........................................ 11
  1.2 Layered Network Architecture ........................................ 12
    1.2.1 Optical Layer ............................................... 13
    1.2.2 Logical Layer ............................................... 14
    1.2.3 Service/Application Layer ................................... 14
  1.3 Multi-Tier Optical Layer ........................................... 15
    1.3.1 One-Tier Network Architecture ................................ 16
    1.3.2 Two-Tier Network Architecture ................................ 18
    1.3.3 Network Scalability .......................................... 19
  1.4 The Current State of Optical Networks ............................. 21
  1.5 Organization of the Book .......................................... 22

2 Recovery in Optical Networks 25
  2.1 Introduction ................................................................ 25
  2.2 Failure Recovery ..................................................... 25
  2.3 Fault Recovery Classifications ..................................... 26
  2.4 Protection of Point-to-Point Systems ............................... 31
    2.4.1 (1 + 1) Protection ............................................. 31
    2.4.2 (1 : 1) Protection ............................................. 32
    2.4.3 (M : N) Protection ............................................. 32
  2.5 Ring-Based Protection ................................................. 32
    2.5.1 Failure Recovery in SONET Networks with Ring Topologies ... 33
    2.5.2 Ring-Based Failure Recovery in Optical Networks with Mesh Topologies 34
  2.6 Path-Based Protection ............................................... 43
    2.6.1 Dedicated Backup Path Protection (DBPP) in Mesh Networks .... 43
    2.6.2 Shared Back Path Protection (SBPP) in Mesh Networks ......... 44
  2.7 Link/Span-Based Protection ......................................... 46
## CONTENTS

2.8 Segment-Based Protection ........................................... 47
2.9 Island-Based Protection .............................................. 48
2.10 Mesh Network Restoration ........................................... 50
  2.10.1 Centralized Restoration Techniques ........................ 52
  2.10.2 Distributed Restoration Techniques .......................... 52
2.11 Multi-Layer Recovery .............................................. 53
2.12 Recovery Triggers and Signaling Mechanisms ..................... 56
2.13 Conclusion ......................................................... 58

3 Mesh Routing and Recovery Framework .................................. 61
  3.1 Introduction ....................................................... 61
3.2 Mesh Protection and Recovery Techniques .......................... 62
  3.2.1 Link-Based Protection ........................................... 63
  3.2.2 Path-Based Protection .......................................... 63
  3.2.3 Segment-Based Protection ...................................... 65
3.3 Concept of Shared Risk Groups ...................................... 67
  3.3.1 Shared Link Risk Groups ....................................... 67
  3.3.2 Shared Node Risk Groups ....................................... 70
  3.3.3 Shared Equipment Risk Groups ................................ 70
3.4 Centralized vs Distributed Routing .................................. 72
  3.4.1 Centralized Routing ............................................. 72
  3.4.2 Distributed Routing ............................................. 74
  3.4.3 Centralized vs Distributed Routing Performance Results ....... 76
3.5 Conclusion ......................................................... 80

4 Path Routing and Protection ............................................ 81
  4.1 Introduction ....................................................... 81
  4.2 Routing in Path-Protected Mesh Networks ......................... 81
  4.3 Protection in Path-Protected Mesh Networks ....................... 83
    4.3.1 Dedicated Backup Path-Protected Lightpaths .................. 84
    4.3.2 Shared Backup Path-Protected Lightpaths .................... 86
    4.3.3 Preemptible Lightpaths ....................................... 90
    4.3.4 Diverse Unprotected Lightpaths with Dual-Homing ............ 90
    4.3.5 Multiple Simultaneous Backup Path-Protected Lightpaths ....... 91
    4.3.6 Relaxing the Protection Guarantees .......................... 92
    4.3.7 Impact of Multi-Port Card Diversity Constraints .............. 94
  4.4 Experiments and Capacity Performance Results ................... 96
    4.4.1 Performance Results for Path-Based Protection Techniques .... 96
    4.4.2 Experiments with Multi-Port Card Diversity .................. 98
  4.5 Recovery Time Analysis .......................................... 99
  4.6 Recovery Time and Capacity Trade-Offs ........................... 103
  4.7 Conclusion ....................................................... 105

5 Path Routing – Part 1: Complexity .................................... 107
  5.1 Introduction ....................................................... 107
  5.2 Network Topology Abstraction .................................... 107
    5.2.1 Service Definition ............................................ 108
    5.2.2 Operational Models: Online vs Offline Routing ............... 108
8 Controlling Sharing for SBPP Services

8.1 Introduction

8.2 Express Links

8.2.1 Routing with Express Links

8.2.2 Analysis and Results

8.2.3 Express Links—Conclusion

8.3 Limiting Sharing

8.3.1 Example

8.3.2 Solution Alternatives

8.3.3 Analysis of Capping

8.3.4 Analysis of Load-Balancing

8.3.5 Limiting Sharing—Conclusion

8.4 Analysis of Active Reprovisioning

8.4.1 Evaluation of Active Reprovisioning

8.4.2 Active Reprovisioning—Conclusion

8.5 Conclusion

9 Path Computation with Partial Information

9.1 Introduction

9.2 Complexity of the Deterministic Approach

9.2.1 Complexity of the Failure Dependent Strategy

9.2.2 Complexity of the Failure Independent Strategy

9.3 Probabilistic Approach

9.3.1 A Problem of Combinations

9.3.2 Analogy with SRG Arrangement into a Set of Backup Channels

9.4 Probabilistic Routing Algorithm with Partial Information

9.5 Locally Optimized Channel Selection

9.5.1 Shared Mesh Protection Provisioning Using Vertex Coloring

9.5.2 Implementation and Applications

9.6 Required Extensions to Routing Protocols

9.7 Experiments and Performance Results

9.7.1 Accuracy and Distributions of Probability Functions

9.7.2 Comparison of Deterministic vs Probabilistic Weight Functions on Real Networks

9.7.3 Benefits of Locally Optimized Lightpath Provisioning

9.7.4 Summary

9.8 Conclusion

10 Path Reoptimization

10.1 Introduction

10.2 Routing Algorithm

10.2.1 Cost model

10.2.2 Online Routing Algorithm

10.3 Reoptimization Algorithm

10.4 The Complexity of Reoptimization

10.4.1 No Prior Placement of Protection Channels or Primary Paths

10.4.2 Prior Placement of Protection Channels or Primary Paths

10.5 Experiments

10.5.1 Calibration

10.5.2 Real Networks

10.5.3 Static Network Infrastructure

10.5.4 Growing Network Infrastructure
### 11 Dimensioning of Path-Protected Mesh Networks
