Index

A
abbreviations, xv
abnormal operations mode, 20
acronyms, xv
action decisions, experience-based, 211
action decisions, risk-based, 212
action item implementation, 35, 249, 251
example tracking log, 252
action items, 253
adequacy of safeguards, 211, 223, 224
administrative approaches to risk reduction, 63, 234
alarm response, 25, 26, 277
American Institute of Chemical Engineers (AIChE), 3
American Petroleum Institute (API), 290
anatomy of an incident, 18, 21
ANSI/ISA-84.00.01, 4
as low as reasonably practicable (ALARP), 212, 222, 231
ASTM E 2012, 523

B
basic process control system (BPCS), 20, 24, 220, 268, 269, 277
batch operation
example, 409
batch processes hazard evaluation, 197, 269
bibliography, 535
blast protection, 28, 291
Bow-Tie Analysis, 24, 171

C
Cause-Consequence Analysis (CCA)
example, 169
cause-consequence pairs, 213, 218, 219
Center for Chemical Process Safety, 2, 301
changes from Second Edition, 4
checklist
chemical reactivity, 468
decommissioning, 452
expanded, 477
hazard checklist, 113
human factors, 279
inherent safety, 472
management of change, 463
simplified, 111
Checklist Analysis, 211, 233
as hazard identification tool, 59
described, 93
example, 96, 379
documentation, 98, 386
Checklist Reviews
for occupational hazards, 64, 204
chemical hazard data, 53
chemical interaction matrix, 55
Chemical Process Quantitative Risk Analysis (CPQRA), 16, 224
chemical reactivity hazards, 58, 272, 468
Chemical Reactivity Worksheet, 58, 523
CHRIS Manual, 523
codes and standards, 39, 48
combined hazard evaluations, 197
commitment of resources, 35
communication of hazard evaluation findings, 253
computerized tools for hazard evaluation, 41, 521
consequence
examples, 19
consequence analysis, 23, 60
consequences of concern, 27, 51, 52, 56, 101, 162, 163, 212, 213, 215, 217, 220, 226, 258, 261, 369, 406
containment and control, 24, 218
control measures, 24
Control of Major Hazards (COMAH), UK, 30
cyclic review, 202
example, 395
D

decision on need for action, experience-based, 211
decision on need for action, risk-based, 212
deluge systems, 28
detection systems, 28
Digraph Analysis, 173
documentation of hazard evaluations, 245
Dow Chemical Exposure Index (CEI), 61, 85
Dow Fire and Explosion Index (F&EI), 61, 84, 87, 182, 290
drawing symbols, 519

E

emergency operations mode, 20, 278
emergency relief systems, 25, 28
emergency response, 216, 291
Energy Trace Analysis, 173
engineered approaches to risk reduction, 63, 234
environmental impacts, 205
Environmental Protection Agency (U.S. EPA), 4
error-likely situations, 276, 283
Event Tree Analysis ( ETA )
described, 158
eexample, 160, 165, 365
inductive approach, 212
minimal cut sets, 162
safeguards, 159, 161
starting event, 159
experience-based action decisions, 211
experience-based hazard evaluation methods, 71
explosion blast protection, 28

F

facilitator (team leader), 42
responsibilities, 43, 45, 46
facility siting, 49, 288
Failure Modes and Effects Analysis (FMEA)
described, 134
eexample, 139, 435
eexample worksheet, 140, 407, 448
failure modes, 137, 138
form, 137
scenarios for risk-based analysis, 212

Fault Tree Analysis (FTA)
cut set resolution, 147, 151
deductive approach, 212
described, 142
eexample, 152, 365
eexample fault tree, 148, 156
faults and failures, 144
minimal cut sets, 142, 152, 157, 223, 377
symbols, 143
top event, 142, 144
tree construction rules, 150
fire protection systems, 28
FMECA, 206, 240
eexample, 242
FMEDA, 206
follow-up considerations, 233

G

glossary, xvii

H

hazard
definition, 51
eexamples, 19
Hazard and Operability (HAZOP) Study
action-only documentation, 129
cause-by-cause approach, 128, 357, 364
design intent, 116, 117
deviation-by-deviation approach, 128, 131, 132, 133, 353
deviations, 117, 127
eexample, 129, 339, 395, 409
eexample worksheet, 131, 133, 133, 353, 358, 364, 405, 422
exception-only documentation, 129
form, 123
guide words, 115, 117, 118, 259, 261
knowledge-based, 126
nodes, 117
of procedure-based operations, 259
parameters, 117, 118
programmable system deviations, 271
safeguards, 117
scenario risk analysis, 212, 364
study sequence, 124
team-based requirement, 43
terminology, 117
variations, 116, 125
hazard evaluation
  boundaries, 38
  combination of tools, 274
  communication of findings, 253
  defined, 11, 15
  documentation, 245
  during mergers and acquisitions, 203
  experience-based methods, 71
  follow-up, 35, 233
  for management of change, 194
  information requirements, 38, 179
  limitations, 30
  management response, 249
  method selection, 175, 263
  non-scenario-based methods, 71
  objectives, 36
  of chemical reactivity hazards, 272
  of generic technologies, 197
  of mega-projects, 203
  of procedure-based operations, 257
  of product families, 197
  of programmable systems, 268
  predictive methods, 99
  preparation, 35, 45, 265
  recommendations, 233
  resolution of action items, 251
  resource requirements, 71
  scenario-based methods, 99, 212
  scheduling, 45
  scope, 38
  synonyms, 16
  templating, 197
hazard identification, 16, 49, 51
  checklist, 477
  Checklist Analysis, 59
  chemical incompatibility hazards, 55
  chemical reactivity hazards, 468
  example, 309
  hazard checklist, 113
hazard reduction, 62
Hazard Warning Structure, 173, 174, 535
HAZOP/LOPA combination, 274
HAZOP/LOPA, 266
human factors, 49, 258, 281
Human Reliability Analysis (HRA)
  described, 279
  example, 284, 435
  minimal cut sets, 449

I
  identifying process hazards, 51
  IEC 61511, 4
  ignition source control, 25, 219, 220, 291
  impact
    defined, 22
    differentiated from loss event, 213
    example categories, 243
    examples, 19
    in scenario risk analysis, 213
    order-of-magnitude scale, 214
  incident investigation reports, 39, 43
  incident scenario, 18
  incompatibility, chemical, 25, 55
  independent protection layers (IPLs), 216, 220, 223, 224, 225, 227, 228, 230, 269, 275
  information requirements for hazard evaluations, 38, 179
  information sharing, 253
  inherent safety checklist, 472
  inherent safety reviews, 49, 62, 199
    with Checklist Analysis, 95
    with HAZOP Studies, 126
    with What-If Analysis, 103
  inherent safety strategies, 63, 234
  initial team review meeting, 47
  initiating cause
    defined, 20, 117
    examples, 19
    frequency determination, 217
    loss of containment frequency, 218
    order-of-magnitude frequency scale, 217
  instrumented protective systems, 4, 25
  interaction matrix, chemical, 311, 312, 313
  isolation valves, 28

J
  Job Safety Analysis (JSA), 205, 258, 281

L
  large process defined, 72
  Layer of Protection Analysis (LOPA), 5, 16, 26, 99, 214, 220, 223, 268, 269, 274
    benefits, 224
    described, 226
    example, 231
    HAZOP/LOPA, 274
    limitations, 224
    What-IfLOPA, 274
layers of protection, 64
life cycle approach, 29
life cycle phases, 198
  conceptual design, 327
  construction/start-up, 200, 379
decommissioning, 203, 451
detailed engineering, 300, 365
hazard evaluation objectives, 37
incident investigation, 435
pilot plant operation, 339
plant expansion, 409
research and development, 199, 315
routine operation, 389, 395
use of hazard evaluation results over facility lifetime, 254, 255
loss event
defined, 20
differentiated from impact, 213
examples, 19
illustrated, 24
Loss-of-Containment Analysis, 173

M
management commitment, 35
management of change, 35
  as control measure, 25
  checklist, 463
  form, 466
  regulatory requirements, 29
  Safety Review example, 389
management of change reviews, 194, 257
Management Oversight Risk Tree (MORT) Analysis, 173
management overview, 11, 15
management response to hazard evaluation, 249
Material Hazard Index (MHI), 87
material hazard properties, 53
mechanical integrity, 24
mega-projects hazard evaluation, 203
mergers and acquisitions, 203
method selection, 175, 263
  flowchart, 186
minimal cut sets, 142, 152, 155, 157, 162, 223, 377
  HRA worked example, 449
mitigate
defined, 20
mitigative safeguards, 23, 24, 28, 215, 219
  receptor-mitigative safeguards, 28, 216
  source-mitigative safeguards, 28, 106, 216
  Mond Index, 87
  Multiple Failure/Error Analysis, 173

N
NOAA Chemical Reactivity Worksheet, 58, 523
non-routine operational modes, 257
non-scenario-based hazard evaluation methods, 71

O
occupational hazards, 204
Occupational Safety and Health Administration (U.S. OSHA), 4, 30
operator response, 25, 220
operator training, 24
order-of-magnitude frequency, 362
order-of-magnitude impacts, 214, 362
overview of Guidelines, 9

P
passive approaches to risk reduction, 63, 234
performance shaping factors (PSFs), 281
periodic review, 202
  example, 395
personal protective equipment (PPE), 28, 205, 216, 276
predictive hazard evaluation methods, 99
Preliminary Hazard Analysis (PHA)
  described, 73
  example, 77, 327
  example worksheet, 76, 78, 335
preparation for hazard evaluations, 35, 45, 265
preventive safeguards, 23, 24, 25, 218, 219, 277
  failure probability, 220
previous incidents, 48
primary containment system, 24
prioritization of recommendations, 241
probability of failure on demand (PFOD), 155, 221, 226, 229
procedure-based hazard evaluations, 257
  example, 266
  HAZOP Study, 259
  method selection, 263
  Two Guide Word Analysis, 261
  What-if Analysis, 261
procedure-based HAZOP Study
  example, 409
procedures, 24
process hazard, 19
process hazard analysis (PHA), 29
process safety documentation, 35, 48
process safety management (PSM), 4, 11, 15, 17, 29, 35, 253
process types, 181
programmable control vs manual control, 270
programmable systems
defined, 268
hardware failure modes, 269
hazard evaluation of, 268
software failure modes, 268

Q

quality considerations, 206

R

ranking of recommendations, 238
test categories, 238
structural importance ranking, 240
readiness review, 201
recommendations, 233
regulatory requirements, 4, 29, 38, 395
rejection of hazard evaluation
recommendations, 250, 251
Relative Ranking
described, 84
example, 90, 409
summary of indexes, 87
relief systems, 25, 28, 220
report contents, 246, 247, 248
research and development phase, 199
test categories, 315
resolution of action items, 251
resource requirements for hazard evaluations, 71, 185
resources, process safety, 529
revalidation, 202
test categories, 395
risk calculation, 212
Risk Management Program (RMP) Rule, 4, 61, 534
risk matrix, 220, 242
test categories, 222, 244
risk reduction strategies, 63, 234
risk understanding, 17
risk-based action decisions, 212
risk-based process safety, 17

S

safeguards
adequacy of, 211, 223, 224
defined, 23, 117
documentation, 100
safety instrumented systems, 4, 25, 220, 268
Safety Review
described, 79
test categories, 83, 379, 389
scenario
defined, 22
test categories, 214
scenario development, 212
test categories, 468
scenario frequency, 217, 220
test categories, 243
scenario risk analysis, 212, 362
scenario-based hazard evaluation methods, 99, 212
scheduling of hazard evaluations, 45
test, 41, 43
secondary containment, 24, 28
security
comparison with process safety scenarios, 207
test categories, 206
selecting of hazard evaluation methods, 175, 263
severity of consequences, 22
Seveso II Directive, 4, 30
sharing of information from hazard evaluations, 293
short-cuts, 197
small system defined, 72
software for hazard evaluation, 41, 521
source-mitigative safeguards, 28, 105, 216
structural importance ranking, 240
Substance Hazard Index (SHI), 87
symbols for example drawings, 519

T

team composition, 42
team leader (facilitator), 42
test categories, 43, 45, 46
team review meetings
arrangements, 46
attendance, 48
facility walkdown, 47
initial meeting, 47
in-person vs remote, 45
room arrangement, 41
team reviews
  importance of, 42
templating, 197
Threshold Planning Quantity (TPQ) Index, 87
top event, 142
training, 24
two guide word analysis, 261
  example, 262

V
vehicle hazards, 22, 24, 220, 291
vinyl chloride monomer (VCM)
  example production process, 306, 316
  hazards, 317
vinyl chloride monomer hazards, 310

W
What-If Analysis
  described, 100
  example, 104, 315
  example worksheet, 105, 323
  form, 104
  of procedure-based operations, 261
  sample questions, 104, 110, 319
  scenarios for risk-based analysis, 212
What-if/Checklist Analysis
  described, 107
  example, 109, 451
  scenarios for risk-based analysis, 106, 114, 212
What-if/LOPA combination, 274
worked examples
  Checklist Analysis, 379
  event tree analysis, 365
  example facility and process, 305
  fault tree analysis, 365
  FMEA, 435
  hazard identification, 309
  HAZOP Study, 339, 395, 409
  human reliability analysis, 435
  management overview, 299
  preliminary hazard analysis, 327
  purpose, 301
  relative ranking, 409
  safety review, 379, 389
  what-if analysis, 315
  What-if/Checklist Analysis, 451
  worst-case consequences, 60
