SUBJECT INDEX

Page references followed by fig indicate an illustrated figure; followed by t indicate a table.

A

Academic integration: Facebook use and social and, 60–65; social media use and relationship to, 56–57; student engagement relationship to, 53–55; Twitter role in, 70–72

Academic performance: findings on Facebook and, 72–76; findings on Twitter and, 76–77; myth on Facebook and poor, 4 fig, 52, 72–73; research on noncognitive variables related to successful, 287–288; self-regulation and, 287; student transition and peer influence predictors of, 64–65, 75–76; studies on relationship between Facebook and, 80–81; studies on social media impact on learning and, 79–82. See also Student learning; Student outcomes

Accountability: increased demands for high education, 5, 86; more social media evaluation due to increased demands for, 209–210; social media intervention evaluation conducted for, 237

Active learning: Chickering and Gamson’s good practice framework on social media, 136–137; effective social media for facilitating, 175–176

Admissions officers: Facebook postings that may be read by, 15–16; how digital inequalities can impact, 31–32, 35; Kaplan survey on percentage who check Facebook profiles, 121

Advertisers: as social media customers, 11; as source of revenue for social media sites, 12

African American youth Twitter use, 24, 33

Age differences: high rate of college-aged youth using SNSs, 17; Instagram use, 26; smartphone ownership, 29–30; tablet computer ownership, 30; Tumblr use, 25. See also Youth

Alexa, 24, 27

Amazon.com, 280

American Library Association’s Presidential Committee on Information Literacy, 194

Anonymity: damage of online bullying through, 114; debate over issue of, 108–111; description of, 106; examples and importance of, 106–108; as force for democratic freedoms and creative expression, 111

ANOVA (analyses of variance), 234

An Anthropologist on Mars (Sacks), 279

Apple, 12–13
Asian American student Facebook use, 33
Assessment: evidence-based practice of social media intervention, 182; qualitative, quantitative, and mixed methods used for, 225, 234–235
“Asshole problem,” 276
Association for Middle Level Education (AMLE), 286
At-risk students: how trace analytics could be used to identify, 289–292; traditional identification of, 289
Attention: cognitive sciences on multitasking and, 78–79; multitasking as divided, 77–78
Authority heuristic strategies, 196
Availability heuristic: application to social media use, 2–3; description of, 2
Back channel (Twitter), 66, 252–254
Berkman Center for Internet and Society, 25
Big Five personality factor conscientiousness, 287
Bisexuals. See LGBT identity development
Blended classrooms. See Hybridized (or blended) college classrooms
Blogs: Cluetrain Manifesto blog assignment, 192; digital self-presentation using, 259–260; Liz Gross’s, 259; NASPA Technology Knowledge Community social media survey on use of, 11, 139–142; On the Go by Ed Cabellon, 259; student affairs professionals sharing professional information using, 262–263; This Side of Theory by Stacy Oliver, 259; Women in Student Affairs (WISA), 259
Blue_beetle, 11
Boston Globe, 196
Bullying (online), 114
Cabellon, Ed, 21
California’s Do Not Track Kids Act, 16
CareerBuilder.com, 15
Chickering and Reisser’s seven vectors theory: applied to using social media for learning, 175–176; principles for good educational practices under the, 136–137; on student identity development, 104–105, 119–120
Children’s Online Privacy Protection Act, 16
Classic controlled experimental design, 229
Classrooms: comparing one from 1990s to modern, 171–172fig; evidence-based practices for using social media in, 177–182; examples of social media in courses for, 183–198; flipped, 292; hybridized or blended type of, 172–173; the near-term future of, 292–294. See also Course social media practices; Formal learning
Cluetrain Manifesto blog assignment, 192
“Cognitive bottleneck,” 78
Cognitive dissonance, 196
Cognitive flexibility model, 196
Cognitive overload, 79
Cognitive sciences, research on effects of multitasking, 78–79
College students. See Students “Coming out” process, 103, 104
Communicating high expectations: Chickering and Gamson’s good practice framework on social media to provide, 136; effective social media for, 176
Communication: establishing organization’s “voice” for, 223; of high expectations to students, 136, 176; how mobile phones have changed, 274; Twitter hashtags used to aggregate back channel, 66, 252–254

Communities of practice: benefits of horizontal structured, 255–256; for building PLN using hashtags, 251–255

Concurrent validity, 229

“Conscientious objectors,” 31

Construct validity, 227–228

Contact (Sagan), 272

Content delivery issue, 210

Course management systems (CMSs): comparing LMSs to, 173; Facebook course discussions compared to, 189–190; Purdue University’s Signals analytic project mining data from, 283; relationship between course outcomes and activity on, 283–284. See also Learning management systems (LMSs)

Course social media practices: assess the intervention, 182; decide on which tool to use, 178; engage in activities linked to positive outcomes, 180; engage with students, 179–180; engagement benefits of, 185–187; importance of how social media is used, 177–178; for information literacy and evaluation learning, 193–198; keep it professional, 180–181; leverage the online disinhibition effect, 182; model appropriate uses of social media, 161–163, 181, 193; Pearson survey on, 183–185; Pearson survey on reported barriers to, 184fig–185; plan assignments, 178; plan for problems, 181–182; set aside time to teach students about social media, 179. See also Classrooms; Facebook course discussions; Twitter course discussions

Courses: congruence between social media use and goals of, 177; content delivery issue of online service delivery models, 210; examples of using social media in, 183–198; is subject matter appropriate to discuss social media, 177–178; MOOC (massive open online course) delivery of, 209–210, 293–294

Credibility: deepening relationship with student by enhancing institution’s, 145; implementing social media by providing accurate information for, 233; website use of traditional cues to trigger authority heuristic, 196

Critical thinking: cognitive flexibility model to enhance, 196; faculty-student interactions contributing to, 55

“Criticism of Facebook” page (Wikipedia), 12

Crowdsourcing, 251–252

Cultural taboos: parallels of sexting to other, 277–278; sexting as, 275–277

D

Data analyses: descriptive and inferential statistics used in, 234–236; infographics used to interpret and report, 236–237; of Twitter use impact on GPA, 235–236

D’Augelli’s model of LGBT identity development, 102–104

Descriptive statistics, 234, 235–236

Devices. See Mobile devices
Diaspora, 13
Digg, 11
Digital identity: judgments made of, 257; professional importance of having a, 258–261; staff training on, 224; Twitter activities by higher education scholars with strong, 250
Digital identity development, 257. See also Online self-presentation
Digital inequalities: conscientious objectors versus disenfranchised youth, 31; digital native myth contradicted by reality of, 38–39; in education, 36–39; gender differences and, 34–35; how college admissions can be impacted by, 31–32; race/ethnicity differences impacting, 33; SES (socioeconomic status) differences and, 33, 35–36
“Digital native” myth, 38–39
Digital self-presentation: controlling social interactions for, 112–113; deciding what should be shared, 261–266; description of, 111–112; online disinhibition effect on, 113–122, 182; personal-professional dichotomy in, 261–263; professional benefits of, 259–260; promoted on static and dynamic websites, 258–259; staff training on, 224
Discriminant validity, 229
Do Not Track Kids Act (California), 16
Dorsey, Jack, 21
Dynamic websites, 258–259

E
Education and Identity (Chickering), 104
EDUCAUSE Center for Applied Research (ECAR), 17
Edventure Builder, 293
Elizabethtown College’s Share Your Acceptance campaign (Facebook), 152–fg–153
Emerging technologies. See New technologies
Emotional management: self-regulation, 287–288; tested during online communication, 120
Employment-Facebook postings issue, 15–16
Erikson’s theory of psychosocial development: applied to the student identity development, 104–105; overview of, 99–101
Ethnic identity: Racial and Cultural Identity Development (RCID) model on, 100–102, 118; sense of self and role of, 118. See also Race/ethnicity differences
European Commission’s “right to be forgotten” legislation, 16
Evaluation. See Social media intervention evaluation

F
Facebook: advertisers as customers and users as products of, 11; for advertising campus activities and programs, 9; comparing Twitter
to, 22; Elizabethtown College's Share Your Acceptance campaign, 152–153; engaging in community building through, 146–153; evidence that the offline world is reflected by, 3; hashtags adopted by, 23; historic development of, 18–20; history of disregarding user privacy by, 11–12; media sensationalism regarding student use of, 2, 4; NASPA Technology Knowledge Community social media survey on use of, 11, 139–142; no federal oversight of, 13–14; norm of using real names as part of culture of, 20; originally sustained by Harvard students, 35; PRISM program participation by, 12–13; RoomSync app for, 150–151, 153; social space for college students function of, 119–120; Statement of Rights and Responsibilities of, 109; trace analytics data gathered from, 285, 286; true identity requirement of, 109; Wikipedia's "Criticism of Facebook" page on, 12. See also Social networking sites (SNSs)

Facebook activities: fourteen broad categories of, 59; frequency of RSVP'ing to events predicator of engagement, 60, 65, 134; infographics on student engagement and, 237, 238; producing positive outcomes for student learning, 180; social and academic integration relationship to, 62–63; social information seeking using, 61–62, 64; student engagement with course through, 57–60, 179–180, 186–187; studies on relationship between academic performance and, 80–81

Facebook course discussions: CMS/LMS as less effective than, 9, 187, 189–190, 292; future classrooms and increased use of, 292–293; learning effectiveness of, 187–191; Pearson survey on privacy concerns over, 187–188; research on barriers to using, 186–187. See also Course social media practices; Twitter course discussions

Facebook postings: algorithms designed to ensure visibility of, 6–7; comparing adult and youth normative perspectives on, 96–98; design change allowing access to public posts by users, 7; future employment or educational plans harmed by, 15–16; “Mckayla is not impressed” meme (2012), 7; psychological regrets over, 14–16; University Student Centers (North Carolina State University), 153–155

Facebook profiles: Kaplan survey on percentage of admissions officers who check, 121; RoomSync used to match roommates using, 150–151, 153

Facebook-student outcomes research: availability heuristic applied to, 2–3; depiction of hypothesized relationship of lower grades and, 4, 52, 72–73; disingenuous or ill-informed interpretation problem of, 5; findings on student engagement, 57–60; on how students improve social and academic integration using Facebook, 62–63; limitations of, 1–2; media sensationalism regarding, 2, 4. See also Social media research

Facebook “likes”: predictive ability of, 282, 285; social status proxy of, 133

Facemash, 19, 20
FactCheck.org, 193
Faculty: appropriate social media use modeled by, 161–163, 181, 193; matching the use of social media with teaching style of, 177; resistance to social media by older, 219; Twitter back channel use by, 66, 252–254. See also Student affairs professionals
Faculty-student interactions: appropriate social media use modeled by faculty during, 161–163, 181, 193; learning benefits of, 55; online relationships kept professional, 180–181; social media used to facilitate, 175
Falsifiability, 231–232
Family Educational Rights and Privacy Act (FERPA), 14, 291
Fantini, Jessica, 146–149

Multitasking: definition of, 77–78; effect on student learning by media, 77–81
MySpace: fake and “creepy” accounts on, 20; racial/ethnicity and gender differences of users on, 33; youth culture on, 132–133

N
NASPA Technology Knowledge Community social media survey, 11, 139–142
National Association of Colleges and Employers (NACE), 141
National Security Agency (NSA): little actionable information gathered by surveillance programs of, 13; PRISM program of, 12–13, 14
Networking skills building: Jeff Pelletier’s approach at Ohio State University to, 157–158; Josh Kohnert’s approach at Western Michigan University to, 158–161; promoted by student affairs, 157–161
New technologies: being an “anthropologists on Mars” to understand student use of, 279–280; how the classroom of the future might look using, 292–294; hype over “ruining our youth,” 278–279; learning analytics, 280–285; MOOC (massive open online course), 209–210, 293–294; personal adoption by student affairs professionals, 280; student affairs professional’s evaluation of, 295–297; trace analytics, 285–292; why student affairs professionals must understand students’ use of, 274–275
New York Times, 196
90-9-1 principle (1 percent principle), 260–261
Ning, 67
Noel-Levitz Higher Education Consulting, 163
Normal science phase, 212
North Carolina State University, 153–155
Northwestern University Norris Center’s restaurant closures tweets, 155fig–156

O
Obama, Barack: impact on minority youth by racists tweets about, 118; Jezebel news site shaming of racist tweets about, 15–16; Twitter account of, 8
Observed score, 285
Observer effect: definition of, 71; Web 2.0 mentality type of, 71–72, 220
Odeo, 21
Office for Retention and Student Success (Southern Illinois University Edwardsville), 145–146
Ohio State University, 157–158
On the Go blog (Cabellon), 259
1 percent principle (90-9-1 principle), 260–261
Online anonymity: damage of online bullying through, 114; debate over issue of, 108–111; description of, 106; examples and importance of, 106–108; as force for democratic freedoms and creative expression, 111
Online bullying, 114
Online content: California’s Do Not Track Kids Act allowing youth to delete, 16; deciding what should be shared, 261–266; implementing social media intervention, 232–233; Jezebel’s public shaming of racist tweets by teens, 15–16; lurking, 134–135, 260–261; 90-9-1 principle (1 percent principle) on, 260–261; online professional self-presentation building through, 257; permanent nature of, 14–16; personal-professional dichotomy in, 261–262; professional development on what should be shared, 261–266; “right to be forgotten” legislation proposed to protect youth, 16
Online courses: congruence between social media use and goals of, 177; content delivery issue of online service delivery models, 210; examples of using social media as part of, 183–198; learning management systems (LMSs) for, 9, 173, 187, 189–190, 292–293; MOOC (massive open online course) delivery of, 209–210, 293–294
Online disinhibition effect: damage of online bullying due to, 114; description and examples of, 113–115; how it might impact a course Twitter feed, 114–115; how the levels of identification relate to, 115–116; leveraged for formal learning, 182; media coverage of the, 114; student identity development and, 116–122
Online identification: how it relates to online disinhibition effect, 115–116; self-presentation process of influencing perception of, 111–113; three levels of, 106–111
Online identification levels: anonymity, 106–111; examples of, 106–108; pseudonymity, 106–111; true identity, 106–111; why they are important, 108–111
Online identity: judgments made of, 257; professional importance of having an, 258–261; staff training on, 224; Twitter activities by higher education scholars with strong, 250
Online professional image: blogs used to build, 259–260; deciding what should be shared to build a, 261–266; personal-professional dichotomy and
building a, 261–263; social media activities used to build a, 264–265; Twitter used to build, 265
Online self-presentation: controlling social interactions for, 112–113; deciding what should be shared, 261–266; description of digital or, 111–112; online disinhibition effect on, 113–122, 182; personal-professional dichotomy in, 261–263; professional benefits of, 259–260; promoted on static and dynamic websites, 258–259; staff training in, 224. See also Digital identity development
Operationalization, 226

P
Paradigm shifts: dichotomy between social media skeptics and crusaders during, 211–215; Kuhn’s scientific revolutions for, 211–213
Pearson’s social media survey: dynamics of social media resistance revealed in data of, 210–211; most often reported barriers to implementation of social media in courses, 184(fig.–185; on privacy concerns over social media use for courses, 187–188; on resistance from older faculty to social media, 219; on social media use for course learning, 183–185
Peer influence: as predictor of student persistence, 64–65, 75–76; student cooperation and, 136, 175. See also Social integration
Pelletier, Jeff, 157–158, 160, 161
Personal information: admissions officers checking applicant’s online, 15–16, 31–32, 35, 121; comparing adult normative and youth normative perspectives of online, 96t–98; deciding what should be shared, 261–266; pitfalls of “oversharing,” 96; seeking social and, 61–62, 64. See also Information
Personal learning network (PLN): description of, 248; engaging established communities of practice to build, 251–255; modeling information literacy skills in your, 254; research social media interventions for, 218; sharing the results of your, 296; student affairs professionals creating their own, 249; Twitter as popular tool for, 249–256, 265.
