SUBJECT INDEX

A
Accommodation, 45, 253
Adaptive
challenge vs. technical problem, 196–197, 308
leadership, 296, 302–303
learning (Heifetz), 292
learning modes (Kolb), 252–254
Adult development,
adult learning and, 287
cognitive complexity and, 289
See also Constructive developmental theories/models;
Transformative learning
Adult learner(s),
anxiety and, 24, 110
“can’t draw” 92
challenges in working with, xiii
“crowded brain” and, 92
default patterns, 44
stages of mind of, 15
Adult learning,
adult development and, 247
challenging hegemonic assumptions about, 305
constructive-developmental theories
and, 269
emotional issues and, 52
experience as basis of, 33, 248
neural networks and, 40
purposes of, 288
right hemisphere emphasis and, 68
Adult transformations. See Development theories;
Transformative learning
Amygdala, 14
Analogic(al),
brain, 59–61
categorization, 76
See also Constructive developmental theories/models;
Transformative learning
Analogical,
appearance in childhood and, 63
complexity and, 301
concept maps and, 203
constructed knowing and, 273
directed brain, 6
embodied brain and, 64
experience and, 76
as fundamental to brain’s associative process, 55
Analogies, 59–68
Analogy (continued)
Gardner's model and, 248
hemispheric development
and, 63
hemispheric processing
and, 71
Heron's model and, 248
non-verbal, 77
symbolic thinking and, 179
thinking and, 64, 67
See also Metaphor

Anxiety
ambiguity and, 5, 20
assessment or appraisal
and, 110
being “wrong” and, 24
cognitive dissonance and, 78
conspiracy theories and, 18
exaggerating, 96
feeling of not knowing and, 21
impedes learning, 7, 94
insufficiently acknowledged,
24
negativity bias and, 4, 17
new learning and, 91
open-ended problems and, 18
performance, 6
scaffolding counters, 110
support/challenge and, 108
unspoken, 94

Assimilation, 45, 253

Association(s),
areas of brain (midbrain), 255
assumptions and, 86
based on what is known, 39
basis of learning, 38, 59
begins in infancy, 63
conscious, 19, 48
dissonance affects, 53, 77
does affect, 185
filters affect, 55
lead to learning, 84
metaphorical thinking and, 65
mnemonics and 40
“Moses illusion” and, 38
neural networks and, 55
reflection and, 216, 259
See also “Broadways”; “Grand
Canyons”

Axon(s), 9, 16

B
Body,
abstract concepts and, 64, 76
-brain connection, 34
Descartes’ (erroneous) view of,
36, 73
fundamental to emotions, 54
learning through the 54
LH perception of, 70, 72
metaphorical thinking and, 65
philosophical primacy of mind
over, 34, 53
primary metaphors, and, 83
subjective impression of, 86
thinking with the, 38
See also Body-brain, Somatic

Body-brain
mind-body, mind, and, 34
tacit knowledge and, 39
Body-state
emotions, feelings, and, 51
homeostasis and, 3
memory-traces and, 47

Brain
aging and, 28
as analogical processor, 59
“anxious brain,” 5
aware and analogy, 283
certainty-seeking, 5, 18, 20
creates cause and effect, 19
“crowded brain,” 92
“curious brain,” 6
eyear human development of, 10–16
energy-saving, 42
function and physical movement, 37
“lazy brain,” 85
“lizard brain,” 13
negativity bias, 4, 17
not designed for thinking, 109
maladaptation and, 26
mammalian, 14
novelty-seeking, 5
pattern-seeking, 6

See also Patterns
plasticity of, 28
relaxation response, 99
self-preservation and, 4, 18
social nature of, 15
as story creator, 19
“triune,” 11
wordless, 62

See also Anxiety; Neural networks
“Broadways”, 44, 171, 265, 288, 295, 302
constructive-developmental theories and, 271, 277, 279
emotions and, 51
long-establishes analogies and, 77

C
Categorization
abstracting as, 68
analogy and, 59–60
association and, 6
default patterns and, 44
memory and, 65
metaphor and, 65
neural networks and, 41
nonverbal, 76
white matter and, 84

Cognition
aging and, 28, 29
brain as “seat of,” 36
cortex and, 16, 37, 263
is embodied, 37
emotions and, 52–54
metaphor and, 65
rational action and, 34
sensing, acting body and, 33
sensory and motor processes, inseparable from, 37
“vertical sandwich” theory of, 262
Cognitive complexity. See  
Complexity of mind  
Cognitive dissonance, 77. See  
Disorienting dilemma  
Commitment  
complexity of mind and, 288  
to informed action, 306–308  
Complexity  
adaptive knowing and, 302  
“approaching the core”  
(Gardner) and, 269  
constructed knowing and, 274  
global, 307  
Kolb’s four dimensions of, 257  
purpose of adult learning  
and, 288  
See also Social complexity  
Complexity of mind  
adult development and, 50  
challenging existing patterns  
and, 55  
embodied learning and, 301  
emotions and, 53, 295  
encouraging, 283  
Kegan’s  
constructive-developmental  
model and, 276–281  
limitations to, 288  
seeing differently as, 291  
meaning construction and,  
308  
Consciousness  
altered state of, 99  
associations and, 19, 259  
feeling of knowing and, 22  
higher, 298  
importance of, 259  
reflection as bridge between  
unconscious thinking  
and, 248  
See also  
Constructive-developmental  
theories/models  
Construction of knowledge. See  
Constructive-developmental  
theories/models  
Construction of meaning,  
36, 66  
complexity and, 279  
Constructive-developmental  
theories/models, 269–283  
comparison of 3 models,  
280–282  
Constructivism, 269  
Cortisol. See Hormones  
Cortex/Neocortex, 16, 37, 63,  
255, 263  
Creativity  
adult learning, commitment  
and 306  
embodied experiences and,  
300  
emotional thought and, 295  
extended mind and, 262  
intuition and, 54  
metaphor, fantasy and, 66  
metaphor, imagination and, 41  
physical activity and, 181  
RH activity and, 181
white matter, complexity and, 16
Curtain of Awareness, 84–87, 126, 257
assumptions behind, 291
Heron’s model and, 299
reflection and 259
Curiosity
anxiety inhibits, 9
iconoclasts and, 22
playfulness inspires, 98, 101

D
Dendrites, 9–10, 28, 60
Development theories, 269–283
“integrative development” (Kolb), 257
Developmental transformation(s). See Adult development; Transformative learning
Disorienting dilemma, 46, 274
Dopamine. See Hormones

E
Emancipatory (learning) See Transformative learning
Embodied (brain)
between perception and knowing, 36
continually reconstructs neural networks, 84
crucial to understanding brain function, 33
non-verbal analogy and, 78
precognitive processes and, 74
reflection and bridge in, 87
response to external environments and, 55
*Theatre of Knowing* and, 81
Embodied experience
concept development and, 76
learning and, 59
presentational knowing (Heron) and, 299
simulations, games and, 209
as source of creativity, 300
Embodied metaphors
arise in childhood, 84
basis of all knowledge and understanding, 289
bring tacit knowledge to awareness, 181
movement and, 116
shape perception, 67
Emotion(s), 51–54
in Boud’s model, 260
cognition and, 53
commitment and, 295
default patterns and, 42, 44
definition of, 51
Descartes and, 36, 295
embodied experiences and, 295
feelings and, 51
fundamental to thought, 55
hemispheres and, 69, 296
in Heron’s model, 249–251
Emotion(s) (continued)
learning and, 24, 44, 52, 92, 268, 295
limbic system and, 14
memory traces and, 83
metaphors and, 64, 67
in Mezirow’s theory, 276
primitive, 4
rational thought and, 34, 52, 54
regulation of, 94
scaffolding and, 111
stories and, 103
values and, 52, 295

Epistemology
definition of, 269
brain-based (Edelman), 38
and constructive
developmental theory, 269

Experiential Learning Theory,
252–257
“Extended Mind” 262

F
Feedback
anxious brain and, 7
cycles and iterative writing, 232
kinds of, 229
negative, 228
overload is counterproductive, 233
peer review, 231
scaffolding and, 106
See also Peer review; Rubrics

Feelings
Damasio and, 54
definition of, 51
emotions and, 51
Heron and, 299
reflective learning and, 259
Filters, 14, 25, 55, 259
See also “Broadways”; “Grand Canyons”

G
Gamification. See Simulations and Games
Ghetto Game, 210
“Grand Canyons”, 44, 51, 171, 273, 288, 290, 302
cultural beliefs and, 279
emotions and, 51

H
Hemisphere(s)
lateralization, 294
reflection, feedback and, 88
right and left differences, 296

Homeostasis, 3

Hormone(s), 6, 93
dopamine, 17, 109
stress and, 52

I
Identity. See “Broadways”;
“Grand Canyons”

Imaginal (experiences)
as imagining (Kolb), 254
precipitate conceptual learning, 251
and presentation (Heron), 251
as source of creativity, 300
as source of discomfort, 178
ways of knowing, 250

K
Knowledge/Knowing
camera lens analogy for two
ways of knowing/learning,
291–293
construction of, 7, 86, 283
facilitation of ways of knowing
(Heron), 249–251
procedural, 271, 272, 279
propositional (Heron), 258,
300 scaffolding and
construction of, 108–112
somatic precedes awareness,
36
tacit/implicit, 39, 55
as transformation of learning
(Kolb), 254
See also Constructive-
developmental theories,

L
Learning
from analogy, 42
aging and, 28
anxiety inhibits, 13
children and, 39
as construction of knowledge
(Mezirow), 7
Curtain of Awareness and, 86
experience and, 38, 248
as interplay between internal
and external environments, 289
memory and, 47–50
as neural association, 42
Piaget’s schema and, 45
situated, 37, 263
“two pathways,” 45
two states of mind and, 4
as whole-body experience, 36
Left hemisphere
anger and, 296
“assault on embodied nature”
297
competition and, 296
denial of right hemisphere
contribution, 297
divorced/disconnected from
body, 72, 297
emotional expression and, 296
iconic symbolic processing,
296
inhibitory effect on right
hemisphere, 75
limit to knowing, 300
local/detailed attention
and, 296
processing speed and, 85
propositional knowing
(Heron) and, 300,
self-referential, 75, 296
Limbic system, 13
social bonding and, 14
Subject Index

M
Memory, 47–50
emotional association and, 83
learning and, 47
types of, 47–49
Metacognitive, 196–201
cycle, 199
Metaphor(s)
abstract thinking and, 68
as basis for imagination and creativity, 41
as body-based, 65
as key to association, 63
children and, 40
embodiment and, 145
experience and, 64
forms of, 66
hemispheres and, 68
primary, 83
transfer of meaning and, 65
unconscious, 42, 61
See also Analogies
Mind-body
duality, 35
subjective impression of separation, 86
See also Body-brain
Movement (physical)
brain aware facilitation and, 116
embodied learning and, 134
metaphor and, 96, 116
motor of cognition and, 116
performing arts and, 116
perspective-taking and, 123
Multiple Intelligences, 265–268

N
Negativity bias, 4
Neural networks
association/connection patterns and, 10, 26, 41
“fired together weird together” and, 43
memory and, 50, 84
Neuron (brain cell), 9, 10
Nun Study, 30

O
Orders of Consciousness Model, 276–279

P
Pattern(s)
adult development and, 283
countering long-established, 36
culture and, 44
default, 44
emotions and, 44
energy-saving brain and, 42
as filters, 44
hemispheres and, 70
identity and, 44
learning and, 85
meaning and, 50,
perspective shift and, 46
presentational knowing (Heron) and, 258
reactivation of, 60
recognition, 18, 30, 41
recognition involves
metaphor, 64, synaptic, 43
See also “Broadways”; “Grand Canyons”
See also Neural networks

Plasticity
aging and, 28
Pre-verbal/non-verbal association, 61
Purpose, See Commitment

R
Reflection
as bridge between tacit and explicit knowing, 87, 261
attention to feelings and, 259
as three-phase process (Boud), 260
Reflective Learning Model, 259–261
Right hemisphere
affinity with natural world, 297
contextual knowing of and adaptive leadership, 302
emotional expressivity and, 298
empathy and, 296
global/contextual attention and, 74
imaginal reach of, 72
metaphorical association and, 296
“mind-reading” and, 296
presentational knowing (Heron) and, 301
sense of euphoria and, 298
sense of universal connection and, 298
slower processing and, 71
social/relational bonding and, 296, 300
symbolic association and, 68
symbolic embodied knowing and, 297
values of, 298
Role plays, See Simulation(s)
Rubrics, 234
(sample) alignment of criteria and assignment, 226
(sample) columns and gradations, 235
(sample) organization keyed to qualitative assessment, 236
(sample) nested and developmental, 239
(sample) journal entries rubric, 207

S
Scaffolding, 108
challenge, support and, 108
complexity and, 110
types of, 111–112
See also Rubrics; Feedback
Self-assessment, 222–226
Simulation(s), 209
as embodied and imaginal, 209
Simulation(s) (continued)
exploring social systems through, 211
as model of ‘reality,’ 209
Situated learning, 37, 263
Social
anxiety, 171
approval and dopamine release, 109
connection and learning, 103
disapproval and pain, 110
motivation to be, 103
pain and cognitive performance, 228
“wired to be,” 263
Social complexity
brain development and, 15
desire for harmony and, 265
evolution and, 262
mammalian survival and, 27
tribalism/tribe and, 14, 27, 290
Social learning, 261–265
Bandura and, 262
brain size and, 263
hemispheres and, 263
situated learning and, 263
system always “on”, 264
theory, 261
Vygotsky and, 262
Somatic (body-based), 36
Situated learning, 37
Stanford Prison Experiment, 211
Symbolic
action, slower (RH)
interpretation of, 72
expression and adaptive learning, 195
and metaphorical association, 68
and nonverbal, embodied learning, 251
precedes logical, 74
related to indigenous world-views, 305
See also Imaginal
Synaptic connections
possible number of, 28
narrowing of, 43
See also “Broadways”; “Grand Canyons”

T
Tacit (knowing), 39, 86
role of reflection in revealing, 87
simulations (games) and, 210
as source of new perspectives, 131, 148
Theatre of Knowing, xi–xii, 81–87
Thinking
body and, 36, 53
metaphor and, 64
purpose of, 36
as rational, cognitive activity, 55
resistance to, 109
Transformation
  complex ways of knowing and, 46, 293
  Mezirow’s ten phases of, 275
  See also Constructive
developmental
theories/models
Transformative learning theory, 273–275
Tribe, See Social complexity

V
Values
  create meaning, 53
  and emotions, 52, 302
  and socialization, 273, 277, 278,
  See also
    Constructive-developmental
theories/models
W
  Writing to learn, 230
  Ways of knowing
cognitive modes (Heron)
  and, 250
  complexity of mind and, 305
development, emotions,
  and, 53
gender and, 271
“lens” analogy and, 291
Women’s Ways of Knowing, 270
  See also, Constructive
developmental
theories/models
Z
Zone of Proximal Development, 110
