Subject Index

Page references followed by fig indicate an illustrated figure; followed by t indicate a table.

Abuse. See Child maltreatment
Achenbach System of Empirically Based Assessment (ASEBA), 51
Action readiness (emotion process), 348–349
Acute stress disorder (ASD), 692
Adaptive/adaptation conditional, 239–240
different meanings of, 240–241
maladaptation versus, 241–243
Adaptive calibration model (ACM)
comparing the ALM to the, 263–265, 266t
four patterns of the, 254–255
implications for developmental psychopathology, 260–262
on responsivity of stress response system (SRS), 238
seven assumptions for application of the, 246–248
on the SRS collection of environmental information, 248–252
on SRS patterns of responsivity, 252–262
ADD (attention deficit disorder), 408
ADHD (attention-deficit/hyperactivity disorder)
anxiety and, 190
bipolar disorder (BPD) with, 708, 721, 722
child abuse and neglect of children with, 192–193
as childhood predictor of CD and delinquency, 455–456
comorbidity with, 429–430, 431t
Cultural considerations, 432–434
diagnostic issues and DSM criteria, 410–411
FASD and children with, 282, 283–285
genetics and heritability of impulsivity and, 186–188
historical context of, 407–409
mild Traumatic Brain Injury (mTBI)–ADHD relationship, 319, 332, 333
prenatal nicotine exposure and, 289–291
prevalence of, 411
protective factors, 434
risk factors and etiological formulations of, 411–428
sex differences, 430–432
studies on brain injuries and, 318–319
terminological and conceptual issues of, 409–410
theoretical synthesis, 435–436
ADHD etiological formulations
bottom-up processes, 423–425
environmental risks and triggers, 416–419
genetic influences on liability to ADHD, 412–415
gene x environment effects and epigenetics, 415–416
neuroimaging findings, 419–423, 424t
performance studies of neuropsychological and cognitive abilities, 423
resource, capacity, and arousal, 427–428
temporal information processing and motor control, 428
top-down processes, 426–427
Adjustment disorders (AD), 692
Adolescents
adolescent limited versus life course persistent conduct problems, 452–453
alcohol and substance use disorders among, 497–515
childhood ODD and CD outcomes for, 458–459
child maltreatment and risk for psychopathology, 144–163
of depressed parents, 126–132
evaluations of behavioral inhibition, 222–224
high- and low-reactive assessments of age 18, 224–226
risk and resilience in, 113–133
Zackery Lystedt Law (2009) prohibiting return to play after concussion, 317–318
See also Children; Developmental psychopathology (DP)
Adults
adolescent limited versus life course persistent
conduct problems, 452–453
childhood ODD and CD outcomes for, 458–459
effects of alcohol abuse on adolescent brain
versus, 511–514
Adverse Childhood Experience (ACE) studies,
690–691
African Americans. See Racial and ethnic
differences
Age differences
adolescent limited versus life course persistent
conduct problems, 452–453
conduct problems prevalence and, 454–455
major depressive disorder (MDD), 612
substance use disorders (SUDs) and, 507
Aggression
proactive and reactive, 473–474
relational, 474–475
See also Oppositional defiant disorder (ODD)
Alcohol abuse
developmental pathways to dependence and,
509–511
effects on adolescent brain development,
511–514
fetal alcohol spectrum disorders (FASD) due
to, 280–289
genetic polymorphism associated with adverse
reactions to alcohol and, 509
prevalence of adolescent, 498–499
studies establishing link between FASD
and, 279
See also Substance abuse
Alcoholic Beverage Warning Label
Act (1989), 279
ALDH2 isoenzyme, 509
Allostatic load, 122, 262–263
Allostatic load model (ALM)
comparing the ACM to the, 263–265, 266t
description of the, 238, 262–263
implications for developmental
psychopathology, 265, 267
American Psychiatric Association (APA)
on BPD diagnosis criteria, 642
on clinical diagnoses among children with
FASD, 282
DSM-5 published by, 50
on increasing problem of ADHD, 407
on ND-PAE, 280
on obsessive-compulsive and related disorders
(OCDRs), 560
on oppositional defiant disorder (ODD) and
conduct disorder (CD), 450
Statistical Manual for the Use of Institutions of the
Insane (1917) by the, 691
See also DSM (Diagnostic and Statistical Manual
of Mental Disorders)
Anorexia nervosa
comorbidity, 829
cultural considerations of, 831–832
developmental progression of, 827
diagnostic issues and DSM-5 criteria, 819–820
historical context of, 818–819
prevalence of, 822–823
risk factors, protective factors, and etiologic
formulations, 823–824
sex differences, 831
Antidepressant prenatal exposure, 295–296
Antisocial behaviors. See Conduct problems
Anxiety
ADHD and, 190
as childhood predictor of CD and
delinquency, 456
Anxiety disorders
comorbidities, 544
cultural considerations, 544–545
developmental progression, 543–544
diagnostic issues and DSM-5 criteria, 531–533
etiology of, 533–543
generalized anxiety disorder (GAD), 567
historical context of, 531
prevalence of, 533
Research Domain Criteria (RDoC), 546
sex differences, 545
Anxiety disorders etiology
central nervous system and peripheral
nervous system processes, 538–540
cognitive processes, 541–543
environmental risk factors, 534–537
gene-environment interactions, 537–538
heritable vulnerabilities, 533–534
Appraising (emotion process), 348–349
Arousal
ADHD etiological formulation and, 427–428
differences in anxiety sensitivity to, 540
Research Domain Criteria on anxiety disorders
and, 546
Asian population. See Racial and ethnic
differences
Asperger’s syndrome, 745
Autism spectrum disorder (ASD)
behavioral symptoms apparent in infancy,
758–761
comorbidities, 746–747
description of, 745
developmental progression, 754–762
etiologic formulations, 748–754
experience-based risk processes in, 748fig
historical context of, 745
overlap between childhood-onset
schizophrenia (COS) and, 791–792
prevalence of, 747–748
protective factors, 762–763
socioeconomic status (SES) considerations
for, 747
synthesis and future directions in study
of, 763–765
terminology and conceptual issues, 746–747
toddler-preschool period symptoms of, 761–762
vaccinations and, 753
Autonomic nervous system (ANS), 349

Behavioral genetics
complexities and limitations of, 76–78
description and three broad classes of, 74
heritable effects, 74–76
of impulsivity, 186
See also Genetics and heritability

Behavioral inhibition
ADHD and response suppression for, 426–427
child and adolescent evaluations of, 222–226
description of, 189
developmental progression of high- and low-risk infants, 220–226
diagnostic issues, 216–217
etiological role of temperaments, 217–220
historical context of the study of, 213–216
impulsivity and, 189–190
reactions to the unexpected or unfamiliar, 219–220
synthesis of studies on high- and low-reactive, 226–229
See also Uninhibited

Behaviors
ADHD and response suppression of, 426–427
child maltreatment and associated problems with, 158
emotions that interfere with appropriate, 354–356
See also Delinquent behaviors

Binge drinking. See Alcohol abuse

Binge eating disorder
comorbidity, 830–831
cultural considerations of, 831–832
developmental progression of, 828
diagnostic issues and DSM-5 criteria, 821–822
historical context of, 818–819
prevalence of, 822–823
risk factors, protective factors, and etiologic formulations, 826
sex differences, 831

Bipolar disorder (BPD)
bipolar I disorder, 712
bipolar II disorder, 712–713
in children and adolescents, 707–708
comorbidities of, 713–716, 727–728
cultural considerations, 728
cyclothymic disorder, 713
episodes of, 709–712
etiology of, 718–722
historical context of, 706–712
pathogenesis and pathophysiology, 722–726
prevalence of, 717–718
problems with diagnosis among youth, 713–717
Research Domain Criteria (RDoC), 728–729
sex differences, 727
theoretical synthesis and future directions for study, 729

Bipolar disorder (BPD) episodes
hypomanic episode, 710
major depressive episode, 710–712
manic episode, 709–710

Bipolar disorder (BPD) pathophysiology
developmental progression, 725–726
molecular physiology, 722–723
neural systems, 723–725

Bipolar I disorder, 712
Bipolar II disorder, 712–713

Birth defects
fetal alcohol spectrum disorders (FASD), 279–289
historical context of studies on teratogens and, 279
teratogen agents that cause, 277–279
teratogen exposure as risk for psychopathology and, 279–297, 417–418
See also Pregnancy

Body dysmorphic disorder (BDD)
classified as one of the OCRDs, 560
comorbidities of, 572–573
cultural considerations of, 575
developmental progression of, 570
differentiating between OCD and, 657–660
DSM-5 diagnostic issues on, 563–565
etiology of, 581–582
historical context of, 562
neuropsychological functioning, 586
prevalence of, 568–569
Research Domain Criteria (RDoC), 588–589
sex differences and, 571

Borderline personality disorder (BPD)
among youth, 645–646
biosocial development model of, 649–651
contextual and family risk factors, 658–661
description of, 642–643, 645
diagnostic, terminological, and conceptual issues, 646–648
etiological formulations, 648–650
familiality and heritability, 650–652
genetics and neurotransmitter dysfunction, 652–658
historical context of, 643–646

Brain development
brain injury implications for, 325–328
child mistreatment and alterations in, 153–157
conduct problems and neural mechanisms, 465–468
effects of adolescent alcohol use on, 511–514
impulsivity and neural plasticity, 194–195
rudimentary knowledge of, 7–8
sensitive periods during, 327
See also Neuroimaging
Brain frontal lobes injuries
dorsolateral prefrontal cortex (DLPFC), 328–329
genetics and heritability factors of, 330–331
orbitofrontal cortex, 329–330
Brain function
alcohol effects on adolescent executive, 513
depressive disorders (DD) and, 627–629
electrophysiology in young children with autism to measure, 755–757
Brain injuries
advances in neuroimaging of pediatric TBI, 323–325
clinical considerations of, 332–333
closed head injury, 316
concussions, 316–318
developmental considerations, 325–328
etiological formulations, 319–325
the frontal lobes and, 328–331
hypoxia mechanism of, 321–323
Phineas Gage case (1848) of, 316, 332
prevalence of, 318–319
terminological and conceptual issues related to, 316–318
trauma mechanism of, 319–321
See also Traumatic brain injury (TBI)
Brain structure
childhood-onset schizophrenia (COS), 800–802
depressive disorders (DD) and, 627–629
frontal lobes, 328–331
SII and BPD neurotransmitter dysfunction, 652–658
of young children with autism spectrum disorder (ASD), 755–757
Bulimia nervosa
comorbidity, 830
cultural considerations of, 831–832
developmental progression, 827–828
diagnostic issues and DSM-5 criteria, 820–821
historical context of, 818
prevalence of, 822–823
risk factors, protective factors, and etiologic formulations, 824–825
sex differences, 831

Cambridge Study in Delinquent Development, 393–394

Centers for Disease Control and Prevention
ADHD surveys sent out to parents by, 411
on alcohol-induced birth defects, 278
on youth suicide and self-injury, 642

Central dopamine functioning, 184–186
Central nervous system (CNS)
anxiety disorders and, 538–540
concussion caused by biomechanical strain on, 317
Child abuse. See Child maltreatment

Child Behavior Checklist (CBCL), 51–52, 471, 472, 624
Childhood-onset schizophrenia (COS)
brain injuries and vulnerability to, 331
comorbidity of, 791
continuity between adult-onset schizophrenia and, 807
diagnostic issues and DSM-5 criteria, 783–784, 784–786
differential diagnostic issues, 786–791
historical context of, 783–784
insights into pathophysiology, 800–806
NIMH COS study on, 788, 793–794, 795, 796–798
overlap between autism and, 791–792
risk factors for, 792–800
sex differences, 791
theoretical synthesis and future directions for study of, 806–807
See also Schizophrenia
Childhood-onset schizophrenia (COS) pathophysiology
brain structure, 800–802
neural networks in schizophrenia, 805–806
neurocognition, 802–804
psychophysiology, 804–805

Subject Index

disruptive mood dysregulation disorder (DMDD), 708
eating disorders, 819–822
HPD and SPD diagnostic issues, 565–567
impulsivity definition in, 182
introduction to the earlier DSM versions including, 40–51
neurobehavioral disorder associated with prenatal alcohol exposure (ND-PAE), 280–281
obsessive-compulsive and related disorders (OCRDs), 560
OCB and BDD diagnostic issues in, 563–565
oppositional defiant disorder (ODD) and conduct disorder (CD), 450
substance use disorders (SUDs), 499–501
trauma- and stressor-related disorders, 691–694

DSM (Diagnostic and Statistical Manual) of Mental Disorders
on developmental psychopathology (DP), 46–51
DSM-I, DSM-II, DSM-II seventh printing early versions of the, 34–36
operationalizing diagnostic criteria: reducing criterion variance, 37–38
reliability, validity, and subsequent versions of the, 36–37
structured interviews: reducing information variance, 38–40
See also American Psychiatric Association (APA)

DSM-II
anxiety disorders of childhood and adolescence, 531
introduction to the earlier DSM versions including, 40–51

DSM-III
childhood-onset schizophrenia (COS), 784, 785, 791
first mention of ADD (attention deficit disorder) in the, 408
introduction to the earlier DSM versions including, 40–51
PTSD first introduced (1980) in the, 694

DSM-III-R
ADHD and subtypes listed in the, 408
anxiety disorders, 544
childhood-onset schizophrenia (COS), 784, 785
hoarding symptoms first listed in, 561
introduction to the earlier DSM versions including, 40–51

DSM-IV
anxiety disorders, 531
childhood-onset schizophrenia (COS), 783, 784
on clinical diagnoses among children with FASD, 282

comparing DSM-5 on substance use disorder (SUD) and, 500–501
hoarding linked to OCD in the, 562
introduction to the earlier DSM versions including, 40–51
Structured Clinical Interviews on prenatal alcohol exposure for, 283
Dysthymic Disorder (DD), 611

Eating disorders
comorbidity of, 829–831
cultural considerations of, 831–832
description of, 818
developmental progression, 827–828
diagnostic issues and DSM-5 criteria, 819–822
historical context of, 818–819
not elsewhere classified (ED-NEC), 818, 828
prevalence of, 822–823
risk factors, protective factors, and etiologic formulations, 823–826
sex differences, 831
synthesis and future directions in study of, 832–833

Stressors
definition of, 120
impact on HPA axis function, 150–152
responses by children of depressed parents,
129–130
stress conceptualized in terms of, 121
See also Child maltreatment
Stress response system (SRS)
adaptive calibration model (ACM) on
responsivity of, 238, 246–247, 252–260,
263–267
allostatic load model (ALM) on responsivity
of, 238, 262–267
conditional adaptation and maladaptation,
238–243
description of the, 237
environmental information collected by the,
248–252
functions of the, 243–246
historical context on the, 237–238
implications for developmental
psychopathology, 252, 260–262, 265, 267
as information filter and amplifier,
250–251
predicted relation between developmental
context and stress responsivity, 247, 248fig
Substance abuse
adolescent experimentation with, 497–498
childhood-onset schizophrenia (COS) and, 799
conduct problems and maternal cigarette
smoking and, 462–463
prevalence of adolescent, 498–499
psychopathology and prenatal exposures to,
291–293
See also Alcohol abuse
Substance use disorders (SUDs)
developmental pathways to dependence and,
509–511
DSM-5 criteria and diagnostic issues, 499–501
environmental risk factors and genetic
vulnerabilities, 505–509
historical context and etiological formulations
of, 501–505
indicators among adolescents, 499–500
protective factors, 508–509
Subthreshold bipolar disorder (BPD), 719
Suicide
CDC statistics on youth, 642
child maltreatment and risk for, 147
increasing rates of, 6
as number-one cause of death for girls
(15–19 years), 5
See also Self-inflicted injury (SII)
Sympathetic nervous system (SNS)
description of, 237
stress response system (SRS) component of,
243–246
Task-based functional imaging ADHD studies, 421
Task switching, 427
Teacher Report Form (TRF), 51
Temperamental impulsivity, 184–186
Temperaments
as childhood predictor of CD and
delinquency, 455
depressive disorders (DD), 625
developmental progression of high- and
low-risk infants, 220–226
emotion dysregulation and, 361–362
etiological role of, 217–220
genes, neurochemistry, and, 218–219
reactions to the unexpected or unfamiliar
and, 219–220
as substance use disorders (SUDs) risk, 506
synthesis of studies on high- and low-reactive,
226–229
Teratogen exposure
ADHD risk and, 417–418
alcohol, 279–289
antidepressant medication, 295–296
historical context of studies on, 279
mental health outcomes in FASD due to,
281–289
methylmercury and lead, 294–295
nicotine, 289–291
other stimulant drugs, 291–293
possible mechanisms of action, 293–294
risk and protective factors, 296–297
synthesis and future directions of research
on, 297
terminological and conceptual issues,
280–281
Teratogens
description and examples of, 277
etiological formulations of, 277–279
Trauma- and stressor-related disorders
childhood adversity and resilience, 690–691
clinical and research challenges to DSM model
of, 694–699
diagnostic issues and DSM-5 criteria, 691–694
dissociation, 684, 686
early development of, 689
etiology of, 686–691
historical context of, 684–686
introduction to, 683
phobias, 684–686
prevalence of, 694–699
Research Domain Criteria (RDoC), 699
synthesis and future directions of study on,
699–700
See also Stress
Traumatic brain injury (TBI)
advances in neuroimaging of pediatric,
323–325
categories of, 321
definition of, 319–320
frontal lobes, 328–331
mild Traumatic Brain Injury (mTBI)
relationship to ADHD, 319, 324–325, 327, 332
sensitive periods during brain development
and, 327
types of damage due to, 320–321
See also Brain injuries
Trichotillomania. See Hair-pulling disorder
(HPD)
Twin studies
body dysmorphic disorder (BDD), 582
on childhood anxiety, 533–534
hoarding disorder (HD), 580–581
major depressive disorder (MDD), 618–620
obsessive compulsive disorder (OCD),
577–578

UCLA COS program, 788
UCLA Family Study, 793
Uninhibited
description of, 219
reactions to the unexpected or unfamiliar and
being, 219–220
See also Behavioral inhibition
Urbanicity and delinquency, 465
US-UK Cross-National Project, 38
Vaccinations, 753
Violence
aggression and, 473–475
as emotion dysregulation etiological
formulation, 364–365
See also Child maltreatment
Vulnerabilities
bipolar disorder (BPD), 718–720
brain injury and psychopathology, 316–334
children of depressed parents risk processes
and, 127–128
to conduct problems, 459–465
delinquent behavior etiology and
individual-level, 388–389
emotion dysregulation as psychopathology,
346–367
high-reactive temperament, behavioral
inhibition, and psychopathology,
213–229
impulsivity association with, 178–197
and impulsivity to psychopathology,
188–196
risk association with, 116–117
of schizophrenia following brain
injuries, 331
substance use disorders (SUDs) environmental
risk and genetic, 505–509
See also Genetic vulnerabilities;
Psychopathology; Risk factors
Working memory
ADHD studies on, 426
alcohol effects on adolescent, 514
definition of, 426
World Health Organization (WHO), 5
Yale-Brown Obsessive Compulsive Scale, 588
Youth Self-Report (YSR), 51
