Subject Index

Anatomy & morphology
apple flowers, 319
grape flowers, 317–319
sapota fruit, 105–142
strawberry flowers, 1–32
Apple
budbreak, 322–324
carbohydrate partitioning, 339–340
climate change, 356–357
deficit irrigation, 350–351
fruit growth, 264–266, 335–338
phenology, 317, 356–357
photosynthesis, 345–349
rootstocks, 197–312
temperature responses, 225–232, 313–369
vegetative growth, 204–224, 320–324, 328–329, 331–332
winter chilling, 322–324
winter injury, 225–230
Ascorbic acid
metabolism, functions and contents, 385–389
Auxin
apple rootstock, dwarfing mechanism, 217–221
Biochemistry
fruit acids, 371–430
Carbohydrate
partitioning, 339–340
reserves in deciduous fruit trees, 348–349
Chilling injury
sapota fruit, 121
China
apple rootstocks, 276
citron, 143–196
Citric acid
metabolism, functions and contents, 399–412
Citron
cultivars, 158–190
distribution in China, 148–151
nomenclature, 147–148
Citrus
citron, 143–196
Climate change
apple, 356–357
grape, 355–356
Cold hardiness
apple rootstocks, 225–230
Controlled atmosphere (CA) storage
sapota, 125–126
Cytokinin
apple rootstocks, dwarfing mechanism, 217–221
Dedication
Janick, J., xii–xvi
Deficit irrigation, 350–351
Disease
apple rootstocks, 242–258
detection, remote sensing, 56–57
sapota, 122–123
Disorder
leaf blackening, 71–104
Dormancy
apple, 317–324
grape, 317–322
Dwarfing
apple rootstocks, 197–312
Erwinia
amylovora, 268–269
Ethylene
sapota storage, 126–127
Fertilization & fertiliser
monitoring, remote sensing, 52–54
Fire blight
apple rootstocks, 268–269
Flower & flowering
induction (strawberry), 5–13
morphology (strawberry), 3–5
strawberry, 1–32
Fruit
acids, 371–430
apple growth, 335–338
carbohydrate partitioning,
338–340
citron, 143–196
grape berry growth, 332–335
quality, impact of rootstock,
262–266
sapota, 105–142
Fruit crops
apple & climate change,
356–357
apple deficit irrigation,
350–351
apple photosynthesis, 345–349
apple rootstocks, 197–312
citron, 143–196
dormancy release, 317–324
grape & climate change, 355–356
grape photosynthesis, 340–345
phenology, 316–317
photosynthesis, 340–349
rootstocks, apple, 197–312
sapota, 105–142
strawberry flowering, 1–32
Genetics & breeding
apple rootstocks, 266–277
citron, 190–192
strawberry, 16–26
Genetic variation
citron, 158–192
strawberry, 5–13
Germplasm
citron, 158–192
Gibberellin
apple rootstocks, dwarfing
mechanism, 217–221
sapota storage, 125–126
Graft & grafting
citron, 151
Grape
berry growth, 332–335
budbreak, 320–322
carbohydrate partitioning,
338–340
climate change, 355–356
irrigation, 349–350
photosynthesis, 340–345
Growth substances
apple dwarfing, 197–312
Health phytochemicals
citron, 152–155
sapota, 111–113
History & iconography
apple rootstocks, 199–204
citron, 145–147
Huanglongbing
citron, 152
Interstems
apple, 259–262
Irrigation
- apple, 350–351
- grape, 349–350

Kiwifruit
- photosynthesis, 340
- shoot growth, 326

Leaf area development
- temperature, 329–332

Leaf blackening
- proteaceous species, 73–104

Malic acid
- metabolism, functions and contents, 399–412

Medicinal crops
- citron, 152–155
- sapota, 111–113

Metabolism
- fruit acids, 371–430

Molecular biology
- disease resistance, 268–270
- dwarfing mechanisms, 266–268

Morphology
- strawberry, 2–3

Mycorrhizae
- apple rootstocks, 250–258

Nutrient
- impact of rootstocks, 214–217
- monitoring, remote sensing, 53–54

Orchard & orchard systems
- rootstocks, apple, 197–312

Oxalic acid
- metabolism, functions and contents, 395–397

Phenolic acids
- metabolism, functions and contents, 382–385

Phenology
- apple, 317
- grape, 316–317

Physiology
- budbreak, 320–324
- carbohydrate partitioning, 338–340
- dormancy, 317–320
- dwarfing mechanisms, apple, 209–224
- fruit acids, 371–430
- fruit growth, 332–338
- high temperature stress, 351–354
- photosynthesis, 340–354
- shoot growth, 324–329
- strawberry flowering, 1–32

Postharvest physiology
- leaf blackening, 73–104
- sapota storage, 122–132

Protea
- leaf blackening, 73–104

Proteaceous flower crop
- Protea, 73–104

Quinic acid
- metabolism, functions and contents, 377–382

Remote sensing, using small unmanned aircraft systems
- aircraft systems, 36–42
- applications, 52–61
- disease incidence, 56–57
- nutrient status, 53–54
- sensors, 42–51
- water stress detection, 54–56
- weed infestation, 57–58

Replant problem
- rootstocks, apple, 250–258

Respiration
- sapota fruit, 114–115
Rootstocks
   apple, 197–312
   citron, 151

Salinity
   apple rootstocks, 241–242

Sapota (Sapodilla)
   CA & MA, 125–126
   fruit processing, 132–134
   fruit quality, 114–132
   fruit storage, 125–126

Shikimic acid
   metabolism, functions and contents, 377–382

Shoot growth
   temperature, 324–329

Small unmanned aircraft systems
   applications, 52–61
   nutrient monitoring, 53–54
   sensors, 42–51
   stress detection, 54–56
   weed infestation, 57–58

Soil
   replant problem, 250–258

Storage
   sapota, 125–126

Strawberry
   breeding, 16–26
   flowering, 1–32

Stress
   high temperature, 351–354
   irrigation scheduling, 349–350

Tartaric acid
   metabolism, functions and contents, 389–392

Temperature
   carbohydrate partitioning, 338–340
   climate change impacts, 355–357
   dormancy and budbreak, 317–324
   leaf area development, 329–332
   photosynthesis, 340–349
   plant growth, 324–329, 351–354

Virus
   apple rootstocks, 244–250

Water relations
   apple, 350–351
   deficit irrigation, 350–351
   grape & grapevine, 349–350
   photosynthesis, 349–351
   stress monitoring, 54–56
