Contents

Foreword by Arthur Freeman xiii
Preface xix
Acknowledgments xxi
List of Abbreviations xxiii
Introduction 1

Part I Neuroscience in Context

1 Neuroscience, Clinical Psychology, and Cognitive Therapy 5
2 The Mind–Brain Problem 11
3 Motor Theories of Mind and a Complex Biocybernetic Model in Neuroscience 20
4 Complexity, Chaos, and Dynamical Systems 27
   4.1 Introduction 27
   4.2 Complexity 27
   4.3 Chaos Theory 29
   4.4 Complex Systems 30
   4.5 From Complexity to a Neuroscience-based Cognitive Therapy 32
5 Modular and Gradiental Brain, Coalitional Mind 35
   5.1 Introduction 35
   5.2 The Modular and Gradiental Brain 37
   5.3 The Social Brain 41
Contents

5.4 The Central Nervous System, Neurovegetative Nervous System, and Visceral Brain
  5.4.1 The Neurovegetative Nervous System  44
  5.4.2 The Visceral Brain  46
5.5 Paleognosis and Neognosis in the Mind of Homo sapiens  47
5.6 Memory  48
5.7 Internal Representational Systems  51
  5.7.1 Imagery  52
  5.7.2 Internal Dialog  54
5.8 Knowledge Processes  54
  5.8.1 Introduction  54
  5.8.2 The Unconscious and Tacit Dimension  55
  5.8.3 Information Coding in the Human Brain  57
  5.8.4 Tacit Knowledge: Experiencing  59
  5.8.5 Explicit Knowledge: Explaining  59
  5.8.6 Procedural Knowledge: Acting  60
  5.8.7 Social or Machiavellian Intelligence: Relating  61
5.9 Coalitional Processes  62
  5.9.1 The Self  62
  5.9.2 Personal Identity  66
  5.9.3 Narrative  67

6 Phylogensis of the Brain and Ontogenesis of the Mind: Biological and Cultural Evolutionism
  6.1 The Reptilian Brain: The Archipallium  76
  6.2 The Limbic System: The Paleopallium  76
  6.3 Brain Structures of Less Evolved Mammals: The Neopallium  77
  6.4 Specialized Frontal Lobes  77

Part II Clinical Psychophysiology and its Parameters

7 Psychophysiology and Clinical Psychophysiology  83

8 Electroencephalography and Quantitative Electroencephalography
  8.1 Electroencephalography  86
    8.1.1 Frequency  87
    8.1.2 Amplitude  88
    8.1.3 Morphology  89
Contents

8.1.4 Symmetry 89
8.1.5 Coherence 89
8.1.6 Artifacts 90
8.2 Quantitative Electroencephalography 91
  8.2.1 Technical and Methodological Aspects 92

9 Electrodermal Activity and Quantitative Electrodermal Activity 96
  9.1 Electrodermal Activity and its Recording 96
  9.2 Computer-Aided Analysis of Electrodermal Activity and Quantitative Electrodermal Activity 103
  9.3 Reference Database 107
  9.4 Evoked Electrodermal Responses 111
  9.5 Effects of Psychoactive Drugs on Electrodermal Activity 111
    9.5.1 Beta-Blockers 112
    9.5.2 Benzodiazepines 113
    9.5.3 Neuroleptics 114
    9.5.4 Antidepressants 115
    9.5.5 Anti-Epileptic Drugs, or “Mood Stabilizers” 115

10 Complex Psychological Diagnosis and Instrumental Psychodiagnostics 116
  10.1 Introduction 116
  10.2 Functional Diagnosis 118
  10.3 Instrumental Psychodiagnostics 120
  10.4 The Contribution of Neuroscience to a Complex Diagnosis 120

Part III Neuroscience-based Methods in the Clinical Setting

11 Complex Psychological Diagnosis with Quantitative Electroencephalography 125
  11.1 Introduction 125
  11.2 Dementia 126
    11.2.1 Materials 126
    11.2.2 Method 127
    11.2.3 Results 128
  11.3 Schizophrenia 129
  11.4 Depression 132
  11.5 Mania 133
Contents

11.6 Attention Deficit Hyperactivity Disorder 133
11.7 Obsessive-Compulsive Disorder 133

12 Complex Psychological Diagnosis with Quantitative Electrodermal Activity 135
12.1 General Aspects 135
   12.1.1 Setting 135
   12.1.2 Advising the Patient 136
   12.1.3 Testing 136
   12.1.4 Assessing and Reviewing Results with the Patient 137
   12.1.5 Planning Treatment 137
   12.1.6 Use of Recorded Data for Constructing a Narrative on the Self-Regulation Process 139
12.2 Data Regarding Specific Clinical Disorders 139
   12.2.1 Generalized Anxiety Disorder 139
   12.2.2 Panic Attack Disorder 140
   12.2.3 Post-Traumatic Stress Disorder 140
   12.2.4 Phobias 140
   12.2.5 Obsessive-Compulsive Disorder 140
   12.2.6 Depression 140
   12.2.7 Eating Disorders 141
   12.2.8 Addictions 141
   12.2.9 Schizophrenia 141
   12.2.10 Mania 141
   12.2.11 Attention Deficit Hyperactivity Disorder 141
   12.2.12 Stuttering 142
   12.2.13 Hypertension 142
   12.2.14 Irritable Bowel Syndrome 143
   12.2.15 Premenstrual Syndrome 143
   12.2.16 Psychogenic Impotence 143

13 Sets and Settings when Applying a Neuroscience-based Clinical Methodology 145

14 Multimodal Assessment of Family Process and the “Family Strange Situation” 152
   14.1 The Family Strange Situation Procedure 154

15 Biofeedback, Neurofeedback, and Psychofeedback 156
   15.1 Theoretical Foundation and Historical Development 156
Contents

15.2 Physiological and Psychophysiological Biofeedback 163
15.3 Biofeedback and Cognitive Therapy 165
15.4 MindLAB Set-based Coping Skills Training 168
15.5 Relaxation, Self-Control, Self-Regulation 168

16 Meditation, Mindfulness, and Biofeedback-based Mindfulness (BBM) 171
16.1 Meditation 171
16.1.1 Types of Meditation 171
16.2 Mindfulness 175
16.3 Biofeedback-Based Mindfulness 177

17 Neurofeedback and Cognitive Therapy 180
17.1 Insomnia 180
17.2 Obsessive-Compulsive Disorder 183
17.3 Attention Deficit Hyperactivity Disorder 186
17.4 Depression 187
17.5 Mania 187
17.6 Drug Dependency 187

18 Psychofeedback and Cognitive Therapy 189
18.1 Mental Disorders 190
18.1.1 Panic Attack Disorder with or without Agoraphobia: Dedalo Protocol 190
18.1.2 Obsessive-Compulsive Disorder: Sisifo Protocol 190
18.1.3 Mood Disorders: Galatea and Eolo Protocols 191
18.1.4 Substance Addiction-Related Disorders: Baccheia Protocols 191
18.1.5 Eating Disorders: Fineo and Tantalo Protocols 191
18.1.6 Personality Disorders: Polifemo Protocol 191
18.1.7 Schizophrenia: Negative Entropy Protocol 191
18.1.8 Attention Deficit Hyperactivity Disorder 192
18.1.9 Stuttering 192
18.2 Psychosomatic Disorders 192
18.3 Meditation, Mindfulness, Music Therapy 193

19 Monitoring the Warning Signs of Relapse in Schizophrenia and Bipolar Disorder, and Coping with Them 194
19.1 Introduction 194
19.2 Schizophrenia 194
Contents

19.3  Bipolar Disorder  196
19.4  Coping with Prodromal Symptoms of Relapse in Psychosis  196

20  Get Started with Neuroscience-based Cognitive Therapy  197
