INDEX

Note: Page numbers in italics represent figures; those in boldface, tables.

Absorption factor, 174
Achiral object, 12
Allegra’s model, 322
Anisotropic temperature factors, 176
Atomic lattice plane, reflection of X-ray by, 123, 124
Atomic positions, identification of, 137
Atomic scattering factor
  definition, 175
  for various atoms, 175

Bernoulli-type distribution, 325, 327
Bessel functions, 149, 149, 320
  in calculated diffraction intensity, 159
  contributing to structure factor on each layer line, 163
  and diffraction pattern of complex helix, 153–154, 154–157
  and experimental distribution of intensity, 161, 161–162
  of first kind, 146, 146
Bond angles, 18
  typical values of, 21, 21
  values of internal coordinates of, 38, 38–39, 39
Bond length
  and calculation of unit twist, 40, 40, 41–42
Bragg condition, 123
  of diffraction, 125
  vector form of, 124, 124
Bragg distance, 93
Bragg peaks, 3, 172, 315, 317

Bragg reflections, 134, 248, 296
  intensity of, 298
  in X-ray diffraction patterns of semicrystalline polymers, 123
Bragg’s law, 123, 124, 127, 136
β-Brass, limit ordered structural model of, 300, 301
Buckingham function, 52
cis-2-Butene, 68
Butene units
  as defects in iPP chains, 396–397
  effect on iPP properties of, 404

Calculated structure factors, 176
Cameras, charge-coupled detector (CCD), 140
Carbon atom, asymmetric, 12, 12
Cartesian coordinate system, 53, 53
Catalysts. See also Metallocene catalysts; Ziegler-Natta catalysts
  for polymerization of propene, 422, 423, 424
  for synthesis of highly syndiotactic polypropylene, 423, 424
Cavitation, vs. plastic deformation, 372. See also Plastic deformation
CDs. See Conformationally disordered crystals
Chain folding, 341
  constraints set by, 104, 104
  impact on crystal structure symmetry of, 103–107, 103–107, 349–352, 350–354, 355
Chain microstructures, 370
Chain repetition distance, 21
Chain symmetry
  entropic principle of conservation of, 92, 95
  principle of conservation of, 92, 97–98, 98
Chains, 342, 349–350
Charge-coupled detector (CCD) cameras, 140
Chiral crystallization of polymers with helical chain
conformations, 110–112, 110–113
Chirality, and helical stems linked by folds, 104, 104
Chirality centers, 7, 12, 12
Close packing, principle of, 88, 97–98, 98, 139
$^{13}$C NMR-CPMAS spectrum, of highly stereoregular sPP
sample, in mesomorphic form, 280, 281
$^{13}$C-NMR data, 170
Cochran, Crick, and Vand (CCV) formula, 144, 147–153, 148,
  149, 151, 152, 320
Cochran-Crick-Vand (CCV) theory, 150
Columnar mesophase, 225
Combikke polymers, 271
Comonomers, and
  constitutional units, 212–215,
in PVDF, 212–215,
in PE, 215–216,
nonenantiomeric
  constitution, of cr,
in isotactic
  stereoregular units,
  homoeptaxy, 359–361,
and growth rates,
  344–345
Conformations, 18
Conformations, 18
  helical
    in isotactic polymers, 46–49, 46–51
    in syndiotactic polymers, 46–48, 46–51, 50
of polymer chains in crystalline state
  basic principles, 21
  equivalence principle, 21–33, 22–24, 25–29, 30, 31, 32, 33
  internal coordinates and conformational
    parameters, 36–46, 38–39, 40–42, 43–44
  principle of minimum conformational internal
    energy, 33–36, 33–36
  of polymers, symmetry operators for, 22, 22
Conglomeration, 112
Conservation of chain symmetry, principle of, 88–92, 89–91,
  92, 95, 97–98, 98
Conservation of helical symmetry of chains, principle of,
  92
Constitution, of crystalline polymers, 3–5
Constitutional defects, and crystallization defects of
  iPP, 395–396
Constitutional repeating units, 3, 4–5, 7, 8, 10, 11
Constitutional unit, 3, 4–5
Copolymers. See also specific copolymers
  alternating, 68–73, 69–73
  of iPP, 391–406
  melting temperatures of, 94
  stereodefective iPP samples, 395
Copolymer sequences, 189
Couples of structural motifs, interaction of, 297
Crazing, in plastic deformation, 371
Crystal growth rate, negative slopes of, 349
Crystal habits
  chain folding, 4–5
  lathes, 2, 17–18
  measurement of integrated intensity of observed reflections
    for, 171–174, 173, 174
  structural analysis of disordered, 299
Crystalline polymorphs, 341, 343
Crystallinity
  modern view of, 190
  in polymers, 2
  and structural disorders, xii
Crystallites, 369
Crystallizability, 2, 17–18
Crystallization
  of solid mesophases, 369–370
  and structural disorders, 369
Crystallographic plane, 355, 357
Crystallography
  classic, 137
  Fourier synthesis and phase problem in, 134–140
  polymer, xi, 95–96
Crystals. See also Polymer crystals
  classification of defects in, 187
  definitions for, 1, 185, 296
  enlarged recent definition of, 190
  of $\gamma$-form of iPP, 208, 376–377, 377
ideal, 1, 185, 186
intrinsic stability of, 369
of polymers, 1–3, 2
structural disorders of, xii, 208

Crystals, disordered
diffraction analysis from, 298–300
short-range order in
class A, 302–305, 303
with substitution-type disorder, 305–309, 307, 308, 310
short-range order vs. long-range order in, 309–311
Crystals, single
deforation, 352, 352
electron micrographs or, 342, 345, 345, 343–345, 344
nomenclature for sectors and fold surfaces of, 355
Crystal structure symmetry, impact of chain folding on, 103–107
Crystals with partial three-dimensional order (class A), 191, 191–192
conformational isomorphism, 202–204, 203, 204
kink-band disorder in, 211
in cooperative crystal-crystal polymorphic transitions, 218, 220
in PE, 215–216, 216, 218
in PVDF, 212–215, 213–215
in sPP, 216–218, 217–219
stacking faults, 104
in α- and γ-forms of iPP, 206–209, 207–210
in β-form of sPS, 209–211, 211, 212
in Form I and Form II of sPP, 104–205, 205–207
substitutional isomorphism of different chains
disorder in orientation of chains around chain axis, 197–200, 198–200
disorder in positioning of up and down chains, 195–197, 196–198
in positioning of right- and left-handed helical chains, 192–195, 192–196
substitutional isomorphism of different monomeric units, 200–201, 201
Crystal systems
interplanar distances for, 170, 171
multiplicity factors for hkl reflections in, 176, 177–179
reciprocal and direct lattices for, 125, 126
C₆₉-symmetric zirconocene complexes, 3/4, 374, 374, 319, 375
Cycloheptene, 68
Cyclopentene, 68
Cylindrical coordinates
calculation of, 140, 141
and diffraction intensity, 150, 151
symmetry relations for, 29, 29–30, 30, 30
Data reduction, 138
Debye function, 338
Debye-Waller factor, 299, 320
Deformation. See also Plastic deformation
in iPP samples, 414, 414
plastic vs. elastic, 373
of semicrystalline polymers, 373
stress-induced phase transformations during, 371–373
Density (entropy)-driven phase formation, xi, 92–95, 92–96
Diffraction, 125. See also Electron diffraction; Selected-area electron diffraction; X-ray diffraction
Diffraction analysis
of complex helical structures, 154
methods, 298–300
Diffraction data
collection of, 299
effect of b/4 shift disorder on, 331
and order-disorder phenomena, 210, 211, 212
Diffraction intensity
average values of, 158, 160, 160–161
calculations of average, 328
stacking fault disorder in β-form of sPS, 333–337, 334, 336
in substitution-type disorder, 328–330, 330
in translation-type disorder, 331–333, 333
for disordered structures, 306, 306
integration method of calculating, 357, 357–358
Diffraction modeling, xi, 299, 311
Diffractometer, 134, 135
Diffuse scattering
analysis of, 297
possible shapes of, 306–308
Dihedral angles, typical values of, 21, 21
Directionality, and helical stems linked by fold, 104, 104
DISCUS program, 309
Dislocations, 189
Disordered models, with perturbations occurring over continuous ranges, 311–315, 313, 315
Disordering transition, 226
Disorders. See also Solid mesophases; specific disorders
Distortions
of first kind, 186, 186, 187, 188, 291, 297
paracrystalline, 187
of second kind, 186, 186, 187, 188, 188, 297, 297
DNA, X-ray diffraction pattern of oriented gel of helical, 147, 147
EFTE terpolymers, alternating, 261, 263, 263
Electron diffraction (ED)
selected-area electron diffraction (SAED), 359, 360–361, 362
of single crystals, 3
Electron diffraction (ED) data, collection of, 299
Electron diffraction (ED) techniques, 298
Electron diffraction patterns
in α-form of syndiotactic polystyrene, 100–101, 100
of form II of ip4MP, 105, 105, 107, 107
of hexagonal single crystals, 109, 109
for ip4MP, 107, 101–102
of sPS single crystals, 336, 336–337
of stacking fault disordered structures, 205, 206, 207
Electron diffraction studies, of polymer single crystals, 2
Electron microscopy, dark-field, sectors visualized in, 350, 350–351
Enthalpic elasticity, of sPP, 439, 439–440
Entropic elasticity, of sPP, 439, 439–440
Epitaxy, alpha to alpha, 361
Equivalence principle, xii, 21–33, 22–24, 25–29, 30, 51, 52, 53, 138
Erythro/threo terminology, 15–17, 16, 17
Ethylene and propylene (EP) copolymers
pseudohexagonal form of, 241–242, 241–245
random, 259–243, 240–243
X-ray fiber diffraction patterns for, 240
Ethylene-chlorotrifluoroethylene (ECTFE), hexagonal
mesomorphic form, 263–264
Ethylene-cis-2-butene, configurations of chain of
alternating, 68, 69
Ethylene-cis-2-butene copolymer, chain of alternating, 68, 70
Ethylene comonomeric units, and $rr$ stereodefects, 396–397, 397
Ethylene copolymers, commercial production of, 398
Ethylene-cyclopentene copolymer (ECC)
chains of meso-disotactic alternating, 69, 70
conformation for alternating, 69–70, 71
Ethylene-norbornene copolymers (ENCs), 228
alternating, 264
c-axis of structure of, 270, 271
chains of, 266, 266
crystalline phase of, 271
crystal structure of, 266, 266, 268
disordered model of packing of isotactic chains of, 268, 269
ionene and polymeric ionic salts, 270
isotactic and syndiotactic, 267
structural disorder in, 268, 268
Ethylene-tetrafluoroethylene (ETFE)
half-width of main diffraction peak of, 258–259, 260
mesomorphic forms of class B, 256
orthorhombic and hexagonal mesophases of, 260, 260–261
proposed crystal structure for, 256, 257
Ethylene-tetrafluoroethylene (ETFE), alternating, order in
crystals of orthorhombic form of, 259–260, 260, 261
Ethylene-tetrafluoroethylene (ETFE) copolymers
alternating, 265–264, 265–264
TFE concentrations of, 260, 262
Ewald’s sphere of reflection of radius, 125, 127, 127, 128
Eyring’s transformation, 52
Fiber diffraction patterns, 132–133, 133. See also X-ray fiber diffraction patterns
Fisher projections, 6
rotated, 7, 13, 13–14, 14, 14
of tetrahedral structure, 7
Force field, for calculation of conformational energy, 52, 53
Fourier synthesis, 137
Fourier transform calculations, 142, 240–241, 241, 248
of discontinuous helix, 147–148
of lattice function, 320
for mesomorphic form of iPP, 276
of mesomorphic form of PTE, 276
of system of planes in real space, 148, 148
Fourier transform infrared (FTIR) spectroscopy, 79, 165, 228
Frustration, concept of, 107–108
Gaussian function, 172, 311–312, 313
Geometrical morphology, xi
Geometry
of molecule, 18
reflection (Bragg-Brentano), 134, 135
tilted, 142, 143
Glide plane t: symmetry, chains with, 45–46
Helical chains
structural factors of more than one, 163, 165, 165
structural factors of single, 162–163, 164
Helical conformation, and optical activity, 66, 67, 68
Helical structures, diffraction theory of, 248
Helical symmetry
chains with $s(M/N)$ helical symmetry, 44–45
and one-atom chain, 37–38, 38
and two-atom chain, 38–42, 40–42, 43, 44
and three-atom chain, 42–44, 43, 44
Helical symmetry of chains, principle of conservation of, 92
Helical symmetry $s(A*M/N)$, 22
Helices
class of, 22, 25, 26, 28
continuous, 144–147, 145–147, 146, 148
discontinuous, 147–148
incommensurable, 153–162, 152, 152, 158, 159, 160, 160,
161, 162
parameters for, 22
right-handed vs. left-handed, 41, 41
HELIX program, 152–153
Helix residue, 22, 25, 26, 28, 40
Heteroepitaxy, bright-field TEM image of iPP crystallized
by, 362
Hexene units, and mechanical properties of iPP, 403, 403
Homoeptix
bright-field TEM image of, 359, 359–360
of $\alpha$-form crystals, 360, 361
in iPP, 361, 363, 364
of polymers, 359, 359–361, 363
iPP samples
elastic recovery in, 388, 389
with $rr$ detects, 383, 384
Ideal crystals, 186, 186
Ideal structures, 185
Identity period, 21
Independent infrared (IR) experiments, 244
Integrated intensities measurement of, 171–172, 173, 174
diP (isotactic polybutene), 371
conformational energy calculations for, 56, 56–57, 57
crystal structure of form III of, 112–113, 114
models of packing for, 90, 91, 91
packing for crystal structures of, 96
iP3MB, packing for crystal structures of, 96
iP4MP
conformational energy calculations for, 56, 56–57, 57
crystal structures of, 105, 106–107
electron diffraction patterns of, 101, 101–102, 107, 107
models of packing for, 90, 91, 106, 106
packing for crystal structures of, 96
packing of chains in form III of, 102, 103
solid-state 13C NMR-CPMAS spectrum of form III of, 102, 102
structure of form II of, 106
IPP (isotactic polypropylene)
α-form of
  crystallization of, 377–378
  packing of, 92, 92
alpha-to-alpha homoeptaxy in, 360, 361, 362
bright-field TEM image of heteroeptaxy in, 362
conformation in chains of, 25
crystalization and physical properties of, 370
crystallization via mesophase of, 417, 417
  crystals of morphologies of γ-form of, 364, 365, 366
  structure of γ-form of, 206, 207
  structures of trigonal form of, 95, 95
defects and disorder of
  influence of conditions of crystallization on mesomorphic form of, 406–420, 407–417, 419–421, 422
  influence of constitutional defects on crystallization behavior of, 390–391, 392–393, 394
  influence of constitutional defects on physical properties of, 397–406, 399–403, 405, 406
  influence of stereo- and regiodefects on, 378–381, 378–382
  influence on crystallization behavior of, 3/4–3/1, 374–378
  stress-induced phase transformations, 382, 382, 383, 384, 385, 386, 386–388
  disordered forms of, 275–276, 275–277
  disordered packing of chains of, 2/6, 276
γ-form of
  cross-β orientation of crystals of, 385, 385–386
  crystallization of, 377–378
  mechanical instability of, 382–383, 394
  in stereodefective IPP samples, 38
  helical conformation of, 30
homoeptaxy in, 361, 363, 364
isotated stereodefect in chain segment, 3/1, 373
line repetition groups for, 33, 34
mesomorphic form of, 406–407
  crystallization pathways of, 413, 413
  DSC heating scan of quenched, 410–411, 412
  mechanical properties of solid mesophase of, 412–417, 413–417
  micrograph of IPP films of, 417, 417
  solid mesophase and γ-form in metallocene IPP, 417–422, 419–421
  stress-strain curves of, 414, 414–418, 419, 420
  tensile-stress-strain behavior of, 414, 414–415
  yield strength of, 415, 415–417, 416
  metalloocene-based samples, 207–208
  modulus data of, 415, 416
  packing of chains in β-form of, 109, 109
  packing of threefold helices of, 197, 198
  phase diagram with regions of stability in, 386, 386, 387
  properties of, 373
  right- and left-handed chains of, 196
  spherulites of, 360, 360
  stacking fault disorders in, 206–209
  stacking of, 92, 92
  stress-strain curves with different stereoregularities of, 90, 99
  stereodefective
    elastic properties and phase transformations in, 388–390, 388–390
    melt-crystallization procedures for, 3/1, 377
    stereoirregular samples with stress-strain hysteresis cycles, 388, 388, 389
    in threefold helical conformation, 103, 103
IPP (isotactic polypropylene) copolymers, with branched comonomers, 276–279, 278–280
IPP (isotactic polypropylene) samples
  α-form of, 386
crystallized from melt
    AFM images of, 409, 410, 411
    AFM phase-mode images of, 408, 408
    optical micrographs of, 408, 409
    metalloocene-made with defects inside crystalline phase, 381
  quenched from melt in mesomorphic form, 410, 410
  with rr defects, 378, 379
  elastic modulus values, 3/9, 380
  and elastomeric properties, 380
  highly stereoregular, 386
  with metalloocene catalysts, 381
  stereodefective
    effect of stress-induced transformations on, 420, 421
    X-ray powder diffraction profiles of, 418, 419
    stress-strain curves with different stereoregularities of, 3/9, 379
    transformation of γ-form into α-form of, 386–387
iPPBu copolymers, 285, 395, 393, 394, 406
  behavior of, 404
  influence on IPP of, 398, 399, 400
  maximum amount of γ-form in, 394, 394, 395
  mechanical behavior of, 403–404
  stress-strain curves in, 401, 402–403
  stress-strain curves of compression-molded films of, 400, 401
  X-ray fiber diffraction patterns of fibers of, 405
  X-ray powder diffraction profiles of samples of, 391, 392
iPPe samples, melting temperature of, 94, 94
ippET copolymers, 402, 406
  behavior of, 404
  influence on IPP of, 398, 399, 400
  maximum amount of γ-form in, 394, 394
iPPEt copolymers (cont’d)
  mechanical behavior of, 403–404
  stress strain curves of compression-molded films of, 400, 401
  X-ray fiber diffraction patterns of fibers of, 405
  X-ray powder diffraction profiles of samples of, 391, 392
iPPHe, melting temperature of, 94, 94
iPPHe copolymers, 393, 393, 394, 406
  behavior of, 404
  f(ω) data for, 395
  influence on iPP of, 398, 400
  maximum amount of γ-form in, 394, 394
  mechanical behavior of, 403–404
  melting temperature and crystallinity, 399, 400
  stress-strain curves of compression-molded films of, 400, 402
  X-ray fiber diffraction patterns of fibers of, 405
  X-ray powder diffraction profiles of samples of, 391, 392
iPPOct copolymers
  organization of chains of, 279, 280
  X-ray fiber diffraction patterns for, 279, 279
iPS (isotactic polystyrene)
  conformational energy calculations for, 55, 55–56
  minimum energy conformations for chains of, 81 packing models for, 90, 90
iP(S)3MP, crystal structure of, 110, 110–111
iPVCH crystals
  characteristic streaks in ED patterns of, 357, 358, 359
  twinned morphology of, 357, 358, 359
  Isomorphism, conformational, 202–204, 203, 204, 213
  Isoprene, constitutional units of, 3
  Isotactic polypropylene. See iPP
  Isotactic polystyrene. See iPS
iSTCO, helical repetition for chain of, 71, 72

stacking faults in, 209–211, 211, 212
trans-planar chains of, 200
X-ray powder diffraction profiles of, 198–199, 199
sPS (syndiotactic polystyrene) single crystals, ED pattern of β-form of, 336, 336–337
sSTCO, glide plane to c repetition for chain of, 71, 72
Stacking faults, 211. See also Kink-band disorders
in α- and γ-forms of iPP, 206–209, 207–210
in β-form of sPS, 209–211, 211, 212, 334–335
in Form I and Form II of sPP, 104–205, 205–207
X-ray powder diffraction profiles of, 210, 211, 211
Statistical disorder, 187, 187
Stem orientation, 360–362, 363
Stereodefects, 370, 375
controlled incorporation of, 371
and crystallization of iPP, 395–396
influence on crystallization behavior of iPP, 374–377, 374–378
and mechanical properties of iPP, 378–381, 378–382
Stereoheterotopic groups, 12
Stereoisomeric centers
double bonds, 5
prochiral, 12
tetrahedral, 6, 15
Stereoisomerism, 5–6
main-chain sites of, 9
sites of, 11
Stereoregularity
defects of, 18
in structural transformations during stretching of sPP, 283–284
Stereoregular vinyl polymers, application of equivalence principle to, 31, 31–33, 32, 33
Stereorepeating units, 5, 8, 9, 9
Stereosequence, 14
Steric hindrance, 34–35, 36
Stress-induced phase transformations, during deformation, 371–373
Stress-strain behavior, of polymeric materials, 372–373
Stress-strain curves
of iPP samples, 413, 414
and shape of elastomeric materials, 380
in sPP samples with different stereoregularities, 434–435, 436
of stereodefective iPP samples, 420
Stress-strain hysteresis cycles
for sPP samples, 437, 438
of stereoregular samples of iPP, 388, 388, 389
Stretching experiments, yield point in, 372
Structural analysis, in classic crystallography, 137
Structural disorders
average diffracted intensity in, 328
stacking fault disorder in β-form of sPS, 333–335, 335
substitution-type disorder, 328–330, 330
translation-type disorder, 331–333, 333
classification of, 185–191
conditions for, 189
with correlations in succession of adjacent layers coupled with translational disorder, 324, 324–325, 326
and diffuse scattering, 296–298, 297
dynamic, 296
and semicrystallinity, 369
substitutional isomorphism of different chains, 317–318
X-ray diffraction intensity, 316
X-ray diffraction intensity calculations
basic formalism in X-ray modeling, 316–319, 319
for effect of longitudinal translational disorder, 319–321
for rotational displacements of chains about their axes, 319–321
substitutional and translational disorder in one dimension, 321–328, 325, 324
Structural features, non-point-centered repeating, 189, 189–190
Structural refinement, of crystal structure determination, 180–181
Structure factors, calculation of, 174–179, 175, 177–179
Styrene-CO copolymers
conformations of chains in isotactic and syndiotactic alternating, 73, 73
constitution of isotactic and syndiotactic alternating, 71, 71–72
Substitutional isomorphism of different chains, 212, 213–214, 214
Substitution-type disorder, 303, 303
Swallow-tailed mesogens, 221, 222
Symmetry breaking
eamples of, 96, 96
in α-form of syndiotactic polystyrene, 100, 100
frustration and, 110
Symmetry operators
for conformations of polymers, 22, 22
line repetition groups for, 23, 23
parameters of, 22
for vinyl polymer chains, 24
Temperature, and structural disorders, 370. See also Melting temperatures
Tensile deformation, stress-induced phase transformations during, 382, 382, 383, 384, 385, 386, 386–388
Tensile stress-strain curves, of mesomorphic iPP, 414, 414, 418–419, 419, 420
Tensile stress-strain testing, for iPP samples, 415, 415
Terephthal-bis-(butylaniline), 225
Tetrafluoroethylene. See TFE
TFE copolymers
  effect of CF₃ groups on, 254
  with fluorinated comonomers, 251–255, 252–255
TFE-hexafluoropropene (HFP)
  DSC heating curves in, 251, 252
  phase diagram of, 252
TFE-HFP copolymers
  increase of unit cell parameter for, 255
  and PTFE homopolymer, 254
  segregation of HFP defects in, 255
  X-ray diffraction profiles of fiber of, 253, 253–254
TG TG sequences, 215, 216
Thermal diffuse scattering (TDS), 299–300
Tilted geometry, 142, 143
Titanocenes, 422
Torsion angles
  and calculation of unit twist, 40, 40, 41–42
  calculation of the values of, 43, 43
  definition of, 18, 18, 19, 19
  with different symmetries, 33, 33
  maps as function of, 42, 48, 48
  of polypeptides, 43, 43
  and principle of staggered bonds, 34, 35
  restrictions of availability of, 20
  values of internal coordinates, 38, 38–39, 39
  for vinyl polymers, 46, 46
  True real-space approach, 311
Twinning, and secondary nucleation theory, 355–357, 357, 358, 359

Uniaxial stretching, plastic deformation induced by, 371. See also Plastic deformation
Unit cell, determination of parameters of, 165
  from oriented fibers, 165–170, 169, 168–169, 171
  from powder samples, 170–171, 172
Unit twist, 38, 38, 41, 49
  for helix s(M/N), 49
  maps of values of, 40, 40, 46–47, 47
  positive value of, 41, 41
Up/down disorder, 195–197, 196–198

Welberry model, 315, 315

X-ray diffraction
  crystal structure determination from
    calculation of structure factors, 174–179, 175, 177–179
    due to Laue function, 181–183, 182
    integrated intensities measure, 171–174, 173, 174
    structural refinement, 180–181
  of crystal structures of polymers, 3
  and determination of parameters of unit cell, 165
  from oriented fibers, 165–170, 169, 168–169, 171
  from powder samples, 170–171, 172
  fiber analysis, 140
    CCV formula for helical structures, 147–153, 148, 149, 151, 152
    continuous helix, 144–147, 145–147
    determination of fiber period, 140–142, 147, 148
  diffraction intensity values, 150, 151
    of helical molecules with more than one chain per unit cell, 163, 165, 165
    nonhelical and helical structures, 142–144, 144
    structure factors of single helical chain, 162–163, 164
  measurements of, 127–128, 130
  of semicrystalline polymers
    basic principles, 123–128, 124, 125, 126, 126–130
    experimental techniques for, 128–134, 131–136
  structure analysis from, 138, 139
  X-ray diffraction intensity
    of fibers of PET, 272–273, 273
    for irregular chain of PET, 274, 274
  X-ray diffraction intensity calculations
    basic formalism in X-ray modeling, 316–319, 318, 319
    for effect of longitudinal translational disorder, 319–321
    for effect of rotational displacements of chains about their axes, 319–321
    substitutional and translational disorder in one dimension, 321–328, 323, 324
  X-ray diffraction patterns
    of fiber of iPP in mesomorphic form, 2/6, 277
    of fiber of 11F-1HjHjP copolymer, 253, 253–254
    of PE fibers in high-pressure hexagonal form, 244
    of stacking fault disordered structures, 205, 206, 207
  X-ray diffraction profiles
    for limit disordered models, 208, 209, 2/0
    of melt-crystallized compression-molded samples, 399
    for model structures of β-form of nylon 6, 234, 234–235
    of sample EN2, 208, 270
  X-ray fiber diffraction patterns, 131, 133, 140, 141
    of ETFE copolymer fibers, 256, 256, 257
    of fibers of alternating EN copolymer, 265, 265–266
    of fibers of highly stereoregular sPP, 432
    of fibers of mesomorphic form of iPP homopolymer, 278, 279
    of fibers of PTFE, 245, 245, 246, 249, 249
    of iamiPP samples with rr defects, 382, 383, 384, 389, 390
    of iPP samples with rr defects, 382, 382, 383, 384, 420, 421
    for kink bands, 214
    of mesomorphic forms of sPS, sPPMS, and sPMMS, 286, 287
    of oriented sample of nylon 6 in β form, 232
    of PEn, 2/1–2/13, 273
    of trans-planar mesophase of sPP, 286
    of sPP in mesomorphic form, 281–282, 282
    of stereodefective iPP sample, 389, 389
    of 11F-1HjHjP copolymers, 251, 252, 253
    of uniaxially oriented PE sample, 243
X-ray powder diffraction profiles
  of alternating ETFE, 257–258, 258, 259
  of copolymer isothermally crystallized from melt, 391, 392, 393
  diffuse halo in, 265, 267
  of EN copolymers, 264–265, 265, 266
  of ETFE copolymers, 261, 262, 263
  examples of, 134, 136
  of iPP, 93, 95
    containing \(rr\) triad stereodefects, 378, 378, 418, 419
    crystallized from melt, 407, 407
    mesomorphic form, 2/15, 275
  stereodefective iPP, 375–376, 376, 418, 419
  structural disorders, 208, 209
  of iPPOct copolymers, 277, 278
  of mesomorphic form of sPP, 2/19–281, 280

of sample EN2, 268, 270
of sPP
  compression-molded films of, 434–435, 435
  of different stereoregularitites, 282–283, 283, 426–427, 427
  disordered, 424, 425–426
  mesomorphic form, 279–281, 280
  stereoregular, 216, 217, 280–281, 281, 440, 440–441
  of stacking faults of disordered structures, 210, 211, 211
    symmetry breaking, 97
  of TFE-FMVE copolymers, 254, 254–255

Young’s modulus, 404, 406, 406, 435, 436

Ziegler-Natta (ZN) catalysts, 68, 370, 373–374, 379, 381, 386, 406, 422
Zirconcene complexes, \(C_2\)-symmetric, 422, 423
Zirconocene complexes, \(C_3\)-symmetric, 3/4, 374, 3/5, 375
