Aachen approach 542–6
ACD method 568, 572
acentric factor (ω) 41–2
acetic acid 341, 344
  association parameters of 403
  association scheme 266
  gas solubility in 341
  mixtures with:
    acetic anhydride 344
    acetone 344, 345
    carbon dioxide 342
    water 341, 348, 364, 403
acetic anhydride, mixtures with acetic acid 344
acetone 8, 12, 198, 318, 336, 364, 539
  activities of 141
  mixtures with:
    acetic acid 344, 345
    alkanes 404
    butanol 30
    chloroform 12, 29–30, 49, 50, 201, 295, 338–41
    heptane 181
    hydrocarbons 52
    methanol 176
    methanol–chloroform 121, 125
    methyl acetate–methanol 121
    water 52, 118, 165, 176, 414, 617
  modeling 341
acetonitrile 525, 617
acid–base concepts, in adhesion 591–4
acid–base theory 581
  industrial examples 593–4
acids 197, 236, 262
  hydrogen bonding of 261
  industrial-process applications 477, 478
mixtures with:
  alkanes 341
  water 403
see also aromatic acids; organic acids; phenolic acids

acridine 573
acrylic acid 452–3
activity coefficient models 79–107, 109–57, 160, 198, 315, 463, 504
  engineering-oriented 476
activity coefficients 7–8, 137, 186, 503
  absolute deviations in 499
  and adsorption models 636–7
  of n-alkanes 55, 56
  of amino acids 625
  for aqueous hydroxides 495
  asymmetric 480
  for bromide salts 494
  of n-butane 56
  derivation of 11
  electrolyte models 473–82
  of ethanol 533
  of ethylbenzene 357
  for evaluating mixing and combining rules 61–5
  experimental 80–2
  expressions of LC models 114
  and Flory–Huggins model 93–4
  of heptane 55
  infinite dilution 82, 302
  mean 476–7
  ionic 466–7
  molal-based 465–6
  osmotic 467–8
  and PDH formula 481
  of peptides 625
  prediction of 532
  of proteins 634
  rational asymmetric 465–7
  single ion 463
  of solvents 513
  trends of 81–2
  values at infinite dilution 8
  for water–NaCl 488
additives, control of 552
adhesion 579, 582
  acid–base concepts in 591–4
  industrial examples of 593–4
  and interfacial forces 591–3
  and interparticle forces 590–1
  pull-off tests for 593
  relative 592
adhesive, pressure-sensitive (PSA) 592
adhesive pressure 590
adsorption 604–9
  applications of 605–8
  and chromatographic separation 631–3
  isotherms 605
  low protein concentration model 633–5
  of proteins 631–7, 644
adsorption models, and activity coefficients 636–7
adsorption theory 591
advanced models 195–459
AFC correlation model 568–9, 571–2
alanine 628
  solubility of 628
albumin 643
alcohol ethoxylates, log $K_{ow}$ predictions 571
alcohols 197, 199–200, 204, 207, 210, 213, 234, 236, 241, 333, 543, 617
  application of SAFT to 395–401
  association scheme for 249, 266, 399
  bonding types 203
  in complex mixtures 262
  derivative properties of 244–5
  generalized associating parameters 401
heavy 247, 262, 283, 320
  aqueous mixtures with 334–6
  hydrogen bonding of 261
  linear oligomers of 266
miscibility in 578
mixtures with:
alcohols 201, 276–9
alkanes 117, 213, 245–7, 268, 272, 274, 303
chloroform 201
esters 414, 416
ethers 414
hydrocarbons 201, 272–3, 401
ketones 201
water 617
models for 216, 283
  and organic acids 341
organic phase estimation of 281
parameters
  estimation of 237
for SAFT 400
  shape factor 247
PC-SAFT equations for 238
  and polar GC–SAFT 416
pure 268
  aldehydes, shape factor parameters 247
aldrin 563
aliphatic acids 180
aliphatic hydrocarbons 246, 275, 420
alkanes 28, 46–7, 65, 137, 163, 207, 213, 241, 244–5, 338, 434, 579
  aliphatic 279
dispersion forces in 579
  heavy 244, 247, 272
homomorph 276
linear 236
mixtures with polyolefins 444
ratio of $T_c/P_c$ against vdW 60
n-alkanes 25, 231, 242, 247
  activity coefficient of 55, 56
  carbon atoms of 169, 178
  derivative properties of 244–5
  difference of combinatorial terms 170
  infinite dilution solubility coefficients of 449
  specific gravity for 325
alkanolamines 262, 266, 318, 333
  application of SAFT to 395–401
  capabilities of 501
  for CO$_2$ and H$_2$S removal 500–3
  and CPA 352–7
  structures of 502
  thermodynamic models for 500–19
alkenes 244
  1-alkenes, electronegativity of 276
alkylbenzenes, and polar GC–SAFT 416
$n$-alkylcyclohexanes 177
alternating tangents method, for LLE calculation 456–7
aluminum 591
Ambrose method 47
amides 617
amines 197, 200, 204, 234, 262, 333, 617
  application of SAFT to 395–401
  association scheme 249, 266
  and CPA 336–41
  hydrogen bonding of 261
  mixtures with:
    acids 420
    alcohol 52
    models for 283
    shape factor parameters 247
  amino acids 472, 613
Index 666
activity coefficients of 625
chemistry and relationships 619–24
dissociation of 623
formation of dipeptides from 623
mixtures with water 622, 628
models for 619–31, 622
partition coefficients of 626–7
relative solubilities of 625–6
2-amino-2-methyl-1-propanol (AMP) 503
and e-NRTL model 509–10
and Gabrielsen model 505–6, 508
ammonia 501
ammonium sulfate 634, 637
analytical solution of groups (ASOG) 129
Anderko model 199
aniline 383
mixtures with water–toluene 385
partition coefficient of 385
pure component parameters 382
anthracene 573
Antoine equation 6
aqueous mixtures
complex 357–61
with heavy alcohols 334–6
aqueous two-phase systems (ATPS) 641–2
argon 22, 33, 83, 94, 95, 120
aromatic acids 180, 333, 360
aromatic hydrocarbons 241, 246, 265, 275–6, 300, 302, 420
polycyclic (PAHs) 245, 360–1
and solvation 265
and tPC–SAFT 412
Aspen’s process simulator 154
asphaltenes 89, 249, 299–300, 307, 329
and flow assurance 422–4
instability onsets and bubble points 424
precipitation of 99–100, 423
associated perturbed anisotropic chain theory
(APACT) 198–9, 595
association energies 263, 269, 376, 393, 539
association models 197–219, 483
parameters
of acetic acid 403
of alcohols 401
and QC 531–40
association schemes 234–5, 266, 273, 356, 387
1A 266, 283, 341
3B 266, 269, 273, 279, 318, 337, 344, 352, 354, 375, 379, 381, 383, 391, 399, 489, 538–9
4C 266, 273, 283, 354, 356, 391, 401, 412, 489, 492, 495, 538–9, 628

for water–methylene–hydrocarbons 279–83
vapor–vapor–liquid (VVLE), for
acetone–n-hexane 406
for water–hydrocarbon 273–6
for water–hydrocarbon–inhibitor 422
for water–methanol 276–9
phenanthrene 181
pheno–formaldehyde, urea-modified (PUF) 593–4
phenolic acids 360
phenols 180, 197, 199–200, 358, 383–6, 553
association scheme 266
phi–phi approach 7
phthalates, log K_pe predictions 571
physical term 198
of CPA EoS 264
phytochemicals 247
phytoplankton 553
piperazine (PZ)
carbamate 510
and e-NRTL model 509–10
and Gabrielsen model 505–6
Pitzer model 476–7, 497, 519
Pitzer–Debye–Hückel formula 477, 480–1
Poisson equation 469
Poisson–Boltzmann (PB) equation 469
polar bonding 579
polar fluids
application of tPC-SAFT to 409–13
and SAFT 405–8
polar terms, comparison of 416–19, 417
polarity, and boiling temperature 27
polarizability, definition of 19–20
polarizable models see continuum solvation models
pollutants
biomagnification of 559
concentration of 553
polyamides
liquid volume of 438
optimum segment diameter of 438
PC-SAFT parameters for 437–8
polyaromatic hydrocarbons 437–8
and polar GC-SAFT 416
polybutadiene (PBD) 144
polybutyl methacrylate, mixtures with:
octane 183, 184
n-pentane 183
polychlorinated biphenyls (PCBs) 553, 555, 555, 563
polychlorotrifluoroethylene 592
polycyclic aromatic hydrocarbons (PAHs) 245, 360–1
poly(dimethyl silamethylene) (PDMSM) 449
poly(dimethyl siloxane) (PDMS) 138, 429, 449
estimation of parameters for sPC–SAFT 434
polyethylene 113, 138, 236, 429, 453, 583
high-pressure technology 447
mixtures with ethylene 186
polyethylene glycol (PEG) 139, 435–7, 641–2, 643
chemical structure of 437
polyethylene terephthalate (PET) 422
Zisman plot for 583, 584
poly(ethylene-co-butene), mixtures with propane 451
poly(ethylene-co-ethyl acrylate), mixtures with ethylene 451
poly(ethylene-co-methyl acrylate) (EMA) 450, 451
mixtures with:
ethylene 451
propylene 451
solubility of 452
poly(ethylene-co-propyl acrylate), solubility of 452
poly(ethylene-co-propylene) 186, 450
poly(ethylene-co-vinyl acetate), mixtures with solvents 451
poly(ethylene–octene), mixtures with hexane 450
polyisobutene 182
polyisobutylene (PIB) 440–2
mixtures with octane 442
polyisoprene (PIP) 95, 141, 143
solubility of gases in 95
poly(isopropyl methacrylate) (PIPMA) 455
polymer models 62
polymeric binders, surface tension of 594
polymers 92–7, 236, 582, 633
adhesion of 591
adsorption of 607
applications:
of SAFT to 429–59, 430–1
of vdW EoS to 182–4
aqueous systems of 446
blends of 446
cubic EoS for 181–7, 185–6
density data 429
polymers (Continued)
estimation of EoS parameters for 187
FV percentages 138
gas solubilities in 94–5
high-pressure thermodynamics of 181–2
LC–FV models for 135–40
miscibility with solvents 104, 105
mixtures with solvent 186
and NRHB 652
nylon 437–8
parameter estimation using GC–sPC–SAFT 454–5
PC–SAFT parameters for 432–3
polar and associating 435–8
silicon 447, 450
solubility of 447
parameters 88
surface tensions of 583
thermodynamic challenges in 658
thickness of 590
volumetric data 429
water soluble 641–2
poly(methyl methacrylate) (PMMA) 431, 435, 444, 454, 591
adsorption on silica 607
pull-off force 592
polynuclear aromatic hydrocarbons (PABs) 563
polyolefins 135, 182, 186, 429, 435, 447
polyoxyethylene 601, 603, 604
polyoxylethylene 498, 603
polypeptides
chemistry and relationships 619–24
mixtures with water 622
models for 619–31
poly(styrene (PS)) 93, 143–4, 443
blends 444–5
estimation of parameters for sPC–SAFT 433
mixtures with:
acetone 142, 145
cyclohexane 183
cyclohexane–CO₂ 447
methylcyclohexane 145, 447
poly(vinyl acetate) (PVAC) 422, 440, 445
poly(vinyl alcohol), mixtures with water 146
poly(vinyl chloride) (PVC) 422
estimation of parameters for sPC–SAFT 434
polyvinylidene fluoride 592
Posey values 517
potassium carboxylates 481
potassium chloride 492, 496, 517, 631, 643
potassium nitrate, solubility in aqueous ethanol
solutions 480
potential energy 585
potential functions, for intermolecular forces 19, 33–4, 35
Pottel expression 490
Poyntel factor 307
Poynting factor 307–8
praline, solubility of 628
Prausnitz, LC developments of 116
precipitation, model for proteins 638–9
pressure 338–9
CO₂–acetic acid 343
primitive models (PMs) 468
process simulators, models used in 505
product design, thermodynamic challenges in 658
propane, dissociation temperature 312
propionic acid 333
propanoic acid 333
propanol 277, 320, 573
mixtures with:
heptane 212
hexane 268, 269
nonane 181
water 11, 53, 162, 176, 334
monomer fraction of 211–12
1-propanol
mixtures with hexane 211
reduced chemical potential of 419
properties
excess (E) values 9–10
mixing (mix) values 9–10
propionic acid 341, 344, 618
proportionality constant (C) 206
propylene 182, 434
propylene glycol (PG) 402
proteins 472, 613, 619, 621–2
activity coefficients of 634
adsorption of 631–7
low concentration model 633–5
mixtures with micelles 639–41
and partition coefficients 639–41
partitioning 640
precipitation model for 638–9
semi-predictive models for 637–44
two-phase separation systems 641–4
proximity effect 526–7
pure component parameters
for aniline 382
for sulfolane 371, 379

vapor compositions 121
vapor phase mole fractions 338–9
vapor pressure 212, 236, 244, 247–8, 263, 265, 376–7
of m-cresol 385
and critical properties 52
in environmental thermodynamics 559, 561
lack of 287, 360
and multifunctional chemicals 352
of n-octacosane 52
of perfluorohexane mixtures 244
of water 139
vapor pressure curve 12
vaporization, enthalpies of 236–7
virial coefficients 34, 167–8, 269, 309, 315
of ethanol 270
osmotic second 638–9, 639
of polar fluids 412
virial equation 34
volume, calculation of 253, 292–4
volume packing fraction, values for 174
volume parameters 247
volume-translated Peng–Robinson model 187
water 138, 208, 212, 234, 236, 241, 543, 617
association scheme 249, 266
bonding types 203
in complex mixtures 262
content of natural gas 315–16
density as function of temperature 27
empirical equation for 200
energy term 316
enthalpy of vaporization of 271
free OH groups for 28
gas phase concentration 280
hydrate phase of 308
in hydrocarbon phase of gas condensate 326
hydrogen bonding of 261
hydrogen bonds of 27–8, 275
ice phase of 307–8
ionization of 501
LLE with heavy alcohols 30
miscibility of 358
mixtures with:
acetic acid 341, 348, 364, 403
acetone 168, 414, 420
alcohols 294–5, 400, 412, 420
alcohols–alkanes 248
alcohols–gases 248
alcohols–hydrocarbons 262, 279
alkanes 172, 578
alkanes–salt 493
alkenes 276
benzene 249, 276, 277, 284, 302
butane 282
butanol 624, 626
carbon dioxide 323
cyclohexane 57
decane 275
esters 414
ethanol 627
ethers 414
fluorocarbons 579
formic acid 364
glycol 294–5
glycol–hydrocarbons 262
hexadecane–n-butanol–isopropanol 283
hexane 275, 276, 284, 302
hydrocarbons 47, 201, 273–6, 303, 305, 389–95
hydrogen sulfide 323
methane 323, 486, 492
methane–sodium chloride 489
methanol 29–30, 197, 249, 276–9, 305, 314, 401, 625
methanol–benzene 282
methanol–butane 282, 283
methanol–hexane 281
methanol–hydrocarbons 269, 279–83
methanol–propane 281
methanol–toluene–methane 282
nylon–caprolactam 446
Index 692

water (Continued)

octane 275
octanol 624
PG–MEG 402
propane 275
propanol 168
salts 487, 492
salts–gases 483
sodium chloride 329, 489
models for 283
monomer fraction of 212
and organic acids 341
percentage free OH groups in 210
pure 197, 207, 268
solubility 277–8
in CO₂ 395
in environmental thermodynamics 559
and spreading coefficient 585
solvation 265
thermodynamic models for 500–19
three-dimensionality of 201
waxes 89, 307, 315, 422
definition of 97
formation and SLE 97–9
and UNIQUAC 151–2
Wertheim expression 498
Wertheim model 201–2, 210
Wertheim term 248, 370
Wertheim theory 373
wetting 579, 582–3
Wilson equation 109, 116, 117
entropic and energetic terms 115
parameters 114
performance of 120
single parameter 123–4, 125
Tassio approach to 123
and UNIQUAC 127–8
Wang–Eckert approach to 124
Wilson interaction energies 124
Wilson model 526
Woll–Hatton model 639–41
Won model 98
Wong–Eckert method 126
Wong–Sandler model 159
predictive 167
Wong–Sandler (WS) mixing rule 167–8, 515
achievements and limitations of 187–8
applications of 174–80
work of adhesion 579, 582–3
work of cohesion 579–80
xenon 33, 83
xylene
in BTEX 302
mixtures with:
acetic acid–water 348
Lutensol FSA10–water 533
partitioning of 533
Young equation 582–3
Young–Dupre equation 582
zero reference pressure limit 163–5, 163
zero reference pressure mixing rules 164
zero reference pressure models, successes and
limitations of 165–7
Zisman plot 583, 593–4
for PET 584
zwitterions 472, 621–3, 630
