Index

A, B, C
anisochronous oscillations, 88
auto-increasing, 149, 183–186
bandwidth, 48, 49, 66, 67, 69, 70, 73, 101
Bennet’s doubler, 188–202, 212–214
bias voltage, 119, 128–133, 149, 150, 184, 212, 216
bifurcation, 31, 113–116, 119
diagram, 113–116
bistable resonators/multistability, 61
Buck converter, 161
bulk process, 122–124
capacitive transducer, 7
charge pump circuit, 115, 117–119
conditioning circuit, 135
conservative force, 33
constant charge circuit, 106, 111, 112, 114–116, 119, 167, 177
continuous conditioning circuit, 115–117, 135, 137, 138–141, 143–152, 171
damping, 4, 27, 29, 33–36, 44, 80, 85, 105, 112, 131
diodes, 117, 138, 178, 189, 190, 192, 193, 200
displacement limit, 128–130
dissipative force, 34, 35, 44, 111
efficiency/effectiveness, 23, 40, 41, 71–74, 124, 157, 172, 185
elastic potential, 74
electrical
force, 5, 14
softening, 68–71
electricity doubler, 173, 188
electromechanical coupling, 23–24, 71, 111–113, 118, 119, 137, 173, 200, 203, 210–214, 216
electrostatic force, 5, 14–17, 30, 121, 128, 129, 210, 212
electrostatic hardening, 71, 113, 118
energy transfer, 20, 21, 155–159, 161–163, 166
F, G, H
first harmonic, 34, 35, 102, 103
frequency
amplification, 68–71
shift of nonlinear oscillations, 104
full-wave rectifier, 151, 206, 208–210
gap closing electrode, 125–127
half-wave rectifier, 133, 151, 203–206, 209, 210
hysteresis, 31, 65, 66, 71–73, 75, 100–102, 119

I, L, M, N
impact nonlinearities, 70, 73
in-plane, 125, 126, 131, 132
limit on converted power, 39
Lindstedt–Poincaré method, 79
linear resonator/resonance, 27, 45–49, 54, 64, 83, 98
mechanical
impedance, 52–54
nonlinearities, 31, 68, 71–74, 105, 110, 111, 113, 119
MEMS, 121
fabrication, 121–124
multimodality, 55, 65, 66, 73
multiple scales method, 63, 79, 88–91, 97–102, 119
nonlinear
force, 34, 54, 68, 72, 94, 102, 103, 106, 109
resonator/resonance, 55
normalized form, 79–81

O, P, R, S
out-of-plane, 125
overlapping electrode, 130–132
piezoelectric, 2, 58, 74, 150, 184
potential
energy, 12–16, 33, 44, 60, 61, 78, 130, 131
well, 60–62, 77
power
balance, 27, 36–40
converter, 157
rectangular charge-voltage cycle, 136
sacrificial layer, 121, 123
self increasing, 151, 173
semi-analytical technique, 79–95
spring softening, 65, 67, 75, 100, 101, 113
steady-state oscillations, 111, 117
stopper, 11, 38, 68, 70, 126, 128–130, 212, 214
straightforward expansion, 79, 81–85, 88, 95

T, U, V
thin film technology, 123–124
undamped resonator, 83
velocity amplification, 68–70
