INDEX

Acute aortic insufficiency, 92–96
angiographic determination, 94–95
aortic root reconstruction, 105–109
aortic valve area calculations, 95–96
case study, 111–115
etiology, 92
pathophysiology, 92–94
percutaneous balloon valvuloplasty, post-dilatation hemodynamics, 180–183
Adenosine, coronary hyperemia, 350
Adolescents
percutaneous balloon valvuloplasty, aortic stenosis, 173–175
pulmonary balloon valvuloplasty, clinical outcomes, 191
Adult patients, pulmonary balloon valvuloplasty, 190–195
AIDS-related non-Hodgkin's lymphoma, cardiac tamponade
Burkitt’s lymphoma, 280
case study, 277–279
epidemiology, 277
hemodynamics, 281
malignant pericardial effusions, 279–280
therapeutic approaches, 280–281
Alcohol-induced septal infarction, hypertrophic obstructive cardiomyopathy, 322–327
case study, 332–334
complications, 331–334
outcomes and complications, 329–334
TASH case study, 322–324
Valsalva maneuver, 324–327
Allograft rejection, post-transplant cardiac tamponade, pericardial fluid, 270–271
All-or-none hypothesis, cardiac tamponade, 271–273
Angina, nitroglycerin effects, 59–60
Angiography
aortic coarctation and persistence of patent ductus arteriosus, 400–403
aortic regurgitation, acute aortic insufficiency, 94–96
historical review, xviii–xix
left main coronary artery stenosis, assessment limitations, 367–376
ventricular septal defect, mitral insufficiency and subaortic stenosis, 403–408
Aortic balloon valvuloplasty
elderly patients, 211–215
mitral regurgitation, 205–209
Aortic coarctation
delayed or late rising pressure, 14–15
persistent arterial duct, 400–403
Aortic-left ventricular gradients, aortic stenosis, 81
Aortic pressure (Ao)
acute aortic insufficiency, case study, 114–115
aortic coarctation and persistence of patent ductus arteriosus, 400–404
aortic regurgitation, 97–102
diastolic murmur, 119–120
transient acute aortic regurgitation, 102–103
aortic stenosis
cardiac rhythms and pressure gradients, 80–81
elderly patients, aortic valvuloplasty, 211–215
hemodynamic artifacts, 81–85
impulse-type gradients, 80–83
invasive hemodynamic assessment, 74–78
peripheral arterial wave summation and zero drift, 85–87
cardiac tamponade
AIDS-related non-Hodgkin’s lymphoma, 277–279
pulsus paradoxus, 273–275
chronic aortic insufficiency, 90–93
constrictive physiology, post-surgical constrictive pericardial disease, 247–250
delayed or late rising central pressure, 12–15
double prosthetic valve stenosis, left ventricular puncture, 157–160
hypertrophic obstructive cardiomyopathy
alcohol septal ablation, 322–324, 328–331
diastolic waveform abnormalities, relaxation impairment, 318–319
disappearing aortic stenosis, 309–311
dual-chamber pacing and Valsalva maneuver, 318–322
Valsalva maneuver, 312–314, 316
mitral regurgitation, aortic valvuloplasty, 205–209
mitral stenosis, pulsus alternans, 144–147
nitroglycerin effects, 60–62
pacemaker hemodynamics, 305
percutaneous balloon valvuloplasty, aortic stenosis, 174–183
pericardiocentesis, 262–266
post-transplant cardiac tamponade, pericardial fluid, 270–271
premature ventricular contractions, 295–296
pressure wave artifacts, 10–11
pulsus alternans, 63–64
transiently wide pulse pressure, episodic aortic insufficiency, 11–13
valvular prosthetics, transvalvular left ventricular outflow tract gradient, 130–134
ventricularization vs., 340–342
Aortic prosthetic valves, left-heart catheterization, mitral balloon valvuloplasty, 223–227

    - renal failure, 253–254  
  - double prosthetic valve stenosis, left ventricular puncture, 156–160  
  - mitral stenosis, pulsus alternans, 145–147  
  - mitral valve regurgitation, 120–122  
  - invasive hemodynamic assessment, 164–166  
  - normal left-side V wave patterns, 33–35  
  - pulsus alternans, 64–66  
  - right-heart failure evaluation, right ventricular enlargement, 456–457  
  - right ventricular infarction (RVI), 431  
  - simultaneous left/right ventricular pressure measurements, pacemaker pressure responses, 52–53  
  - tricuspid valve  
    - right atrial-ventricular gradients, 29–31  
    - “X” and “Y” troughs, 24  
- Balloon dilatation techniques  
  - percutaneous balloon valvuloplasty  
    - aortic stenosis, 177–179  
  - mitral stenosis, 185–188  
  - pulmonary balloon valvuloplasty, 188–195  
- Basal average peak (mean) velocity (BAPV)  
  - coronary flow reserve, 360–363  
  - coronary vasodilatory reserve, 352–354  
- Bernoulli equation, aortic stenosis hemodynamics, 71–72  
- Beta blockade, mitral stenosis, pulsus alternans, 144–147  
- Bezold-Jarisch reflexes, right heart ventricular infarction, 431–432  
- Bicuspid aortic valve stenosis, percutaneous balloon valvuloplasty, 173–183  
- Blood volume reduction, low-output hypotension, preload alterations, 450–451  
- Bradycardia-hypotension, right heart ventricular infarction, 431–432  
- Brisk carotid waveform, dyspnea evaluation, 447
Brockenbrough-Braunwald-Morrow sign, hypertrophic obstructive cardiomyopathy
alcohol septal ablation, 322–327
disappearing aortic stenosis, 311
preload alterations, 312–314
Burkitt’s lymphoma, cardiac tamponade, 280

Calibration errors, pressure wave artifacts, 9–11
Cannon waves, tricuspid valve, 24–25
Carabello’s sign, aortic stenosis, invasive hemodynamic assessment, 76–78
Cardiac arrhythmias
atrial waveform artifacts, 296–298
coronary blood flow velocity measurements, respiratory variations, 346–348
epidemiology, 295
irregular rhythms, 296
premature contractions, 295–296
right heart ventricular infarction, 431–432
wide QRS waveform patterns, 298–299

Cardiac output
low-output hypotension, bedside evaluation
cardiac arrhythmias, 449
coronary blood flow velocity measurements, respiratory variations, 346–348
epidemiology, 295
irregular rhythms, 296
premature contractions, 295–296
right heart ventricular infarction, 431–432
wide QRS waveform patterns, 298–299

Cardiac rhythm
atrial waveform artifacts, 296–298
coronary blood flow velocity measurements, respiratory variations, 346–348
epidemiology, 295
irregular rhythms, 296
premature contractions, 295–296
right heart ventricular infarction, 431–432
wide QRS waveform patterns, 298–299

Congestive heart failure (CHF), low-output hypotension, systemic vascular resistance, 449

Constrictive pericardial disease. See also Compressive pericardial hemodynamics; Pericarditis

Catheterization techniques
constrictive physiology, 242–243
coronary hemodynamics, 339–342
arterial wall abutment, pressure damping, 342
pressure damping, 340
ventricularization case study, 339–340
ventricularization mechanisms, 341–342
ventricularization vs. ventricular pressure, 340–341

Cathode ray tube, hemodynamic history and, xviii–xix
Central aortic pressure, delayed or late rising artifacts, 113
etiology, 89
hemodynamic pathophysiology, 89–90
peripheral pulse amplification, 91–92
physical findings, 90–91
pulmonic stenosis with, 169–171

Combined mitral/aortic stenosis, case study, 123–128

Compressive pericardial hemodynamics
atrial waveforms, 256
constrictive vs. restrictive physiology, 257–258
diastolic plateau, 254
epidemiology, 253
Kussmaul’s sign, 257
low pressure tamponade, 255–256
M configuration mechanisms, 256–257
renal failure patients, 253–254
Concordant ventricular pressures, respiratory hemodynamic criteria, 240–242
Conduction, simultaneous left/right ventricular pressure measurements, 50–51

Congenital heart disease
atrial septal defect/left ventricle diastolic dysfunction, 399–400
persistent arterial duct/aortic coarctation, 400–403
pulmonary balloon valvuloplasty in repaired hearts, 191–195
ventricular septal defect, post-surgical mitral insufficiency and subaortic stenosis, 403–408

Congestive heart failure (CHF), low-output hypotension, systemic vascular resistance, 449

Constrictive pericardial disease. See also Compressive pericardial hemodynamics; Pericarditis
complex patient case study, 283–286
compressive pericardial hemodynamics and, 258–259
empty pericardium, 261–262
right atrial pressure elevation, 262–266
pericardiocentesis, 262

INDEX
Continuous-wave Doppler tracings
aortic stenosis hemodynamics, 71–73
Doppler flow, coronary hemodynamics, 343
Corigan’s pulse, aortic regurgitation, 98–99
Coronary artery bypass graft (CABG), left main coronary artery stenosis, assessment methods, 368–376
Coronary blood flow
aortic stenosis, low aortic-left ventricular gradients and flow, 81
constrictive physiology, Doppler flow criteria, 239–240
hypertrophic obstructive cardiomyopathy, alcohol septal ablation, 326–327
myocardial infarction, post-infarction coronary pressure and flow measurement, 358–363
nitroglycerin effects, 57–59
percutaneous balloon valvuloplasty, post-dilatation hemodynamics, 180–183
vasodilatory reserve and hyperemia, 349–354
velocity measurements, Doppler catheters, 343–344
atrial fibrillation, 346, 348–349
respiratory maneuvers, 345–346
velocimetry principles, 343
ventricular tachycardia, 348–349
Coronary flow reserve (CFR)
hemodynamic influence on, 352–353
myocardial perfusion imaging, 354–355
post-myocardial infarction, 359–363
Coronary hemodynamics
catheter tip pressures, 339–342
arterial wall abutment, pressure damping, 342
pressure damping, 340
ventricularization case study, 339–340
ventricularization mechanisms, 341–342
ventricularization vs. ventricular pressure, 340–341
coronary flow reserve and hyperemia, 349–354
adenosine, 350
dipyridamole, 350–351
dobutamine, 351
guidewire pressure measurements, 353
intracoronary pressure and FFR, 353
nitroglycerin, 351–352
papaverine, 352
pharmacologic agents, 350–352
pressure pullback, 353–354
sodium nitroprusside, 352
vasodilatory reserve variations, 352–353
Doppler flow, 342–349
atrial fibrillation, flow velocity, 346–347
coronary flow velocity signal, 344–345
intracoronary blood flow velocity measurements, 343–344
respiratory maneuvers, 345–346
velocimetry principles, 343
ventricular tachycardia, 348–349
intracoronary pressure measurements, clinical applications
orthopedic physiology and myocardial perfusion imaging, 354–355
FFR and IVUS measurements, 355–356
intermediate stenosis assessment, 354
ischemic thresholds, 354
left main coronary artery disease, 357
multivessel disease, FFR measurements, 356–357/ostial and “jailed” side lesions, FFR measurements, 358
post-myocardial infarction, 358–363
post-PCI FFR, 358
single vessel serial (multiple) lesions, 357–358
reference CVR measurements, 363–364
Coronary spasm, coronary catheterization, catheter tip abutment, arterial wall, 342
Coronary vascular resistance (CVR)
left anterior descending artery, 360–363
vasodilatory reserve and hyperemia, 349–354
Coronary vasodilatory reserve hemodynamics, 349–354
variations in, 352–354
Cough pulse pressure, coronary blood flow velocity, Doppler measurements, 346–348
Cui simplified mitral valve gradient calculation technique, 161–162
C wave
left-side V wave patterns, 34–35
right heart ventricular infarction, 431
Data collection and management
aortic stenosis, disappearing gradients, 79–80
historical review, ix–xx
DDD pacemaker
compressive pericardial hemodynamics, low pressure tamponade, 255–256
hypertrophic obstructive cardiomyopathy
dual-chamber pacing, 327–328
Valsalva maneuver, 321–322
limitations and failures of, 326
Deferral of PTCA versus performance of PTCA (DEFER) study, intermediate stenosis assessment and outcomes, 354, 356
DeMusset's sign, aortic regurgitation, 98–99
Depressed carotid waveform, dyspnea evaluation, 447
Diastolic filling period (DFP), Cui simplified mitral valve gradient calculation technique, 161–162
Diastolic murmur
aortic regurgitation, 119–120
case studies, 97–99
chronic aortic insufficiency, 90–91
atrial septal defect, left ventricle diastolic dysfunction, 399–400
pulmonary valve, 170–171
Diastolic plateau, compressive pericardial hemodynamics, 254–255
Diastolic waveform abnormalities, hypertrophic obstructive cardiomyopathy, relaxation impairment, 318–319
Differential diagnosis, left ventricular end-diastolic pressure, 43–45
Diffuse coronary disease, fractional flow reserve measurements, 357–358
“Dip and plateau” configuration, compressive pericardial hemodynamics, 254–255
Dipyridamole, coronary hyperemia, 350–351
Disappearing aortic stenosis, hypertrophic obstructive cardiomyopathy, 309–318
dynamic LVOT gradients, 314–317
intracavitary pressure differences, 309–311
intramyocardial pressure, intraventricular pressure gradients, 317–318
preload alterations and intraventricular gradients, 311–314
Discordant ventricular pressures, respiratory hemodynamic criteria, 240–242
Disequilibration, pressure wave artifacts, 16
Dobutamine
coronary hyperemia, 351
stress testing, mitral valve gradients, 217–221
Doppler echocardiography
aortic regurgitation, 99–102
constrictive physiology, 235–237
flow criteria, 239–240
mitral valve area calculations, pressure half-time methods, 139–140
valvular prosthetics, transvalvular left ventricular outflow tract gradient, 132–134
Doppler flow, coronary hemodynamics, 342–349
atrial fibrillation, flow velocity, 346–347
coronary flow velocity signal, 344–345
intracoronary blood flow velocity measurements, 343–344
respiratory maneuvers, 345–346
velocimetry principles, 343
ventricular tachycardia, 348–349
Doppler guidewire, characteristics, 343
Double transseptal puncture, mitral balloon valvuloplasty with left-heart catheterization, prosthetic valves, 226–227
Dual-chamber pacing, hypertrophic obstructive cardiomyopathy alternative therapies using, 327–328
Valsalva maneuver, 318–322
Duroziez’s sign, aortic regurgitation, 99
Dyspnea, hemodynamic evaluation
carotid waveform analysis, 447
elevated pulmonary capillary wedge pressure, 445
invasive techniques, 447–448
left ventricular diastolic function, 446–447
primary LA disease, 445–446
primary mitral valve disease, 446
Echocardiography
aortic stenosis, 71–72
cardiac tamponade, 273
prosthetic valve assessment, 152–153
right heart ventricular infarction diagnosis, 433
Elderly patients, aortic balloon valvuloplasty, 211–215
Electrocardiography
acute aortic insufficiency, 111–115
pulmonic stenosis, 168–170
right heart ventricular infarction, 431–432
Empty pericardium
constrictive pericardial disease, 261–266
right atrial pressure elevation, 262–266
End-diastolic pressures
constrictive pericarditis diagnosis, post-surgical constrictive pericardial disease, 250–251
left-sided V wave, 35–36
left ventricular pressures
basic principles, 43–44
diagnostic applications, 43–45
influences on, 45–47
nitroglycerin effects, 55–57
Episodic aortic insufficiency, transiently wide pulse pressure, 11–13
Equipment specifications, hemodynamic studies, xx–xxi
Exercise hemodynamics
percutaneous balloon valvuloplasty, mitral stenosis, 183–185
prosthetic valves, 153
Failure mechanisms, prosthetic valves, 151
Femoral artery (FA) pressure
aortic regurgitation, 97–100, 118–120
aortic root reconstruction, 106–107
aortic stenosis
disappearing gradients, 79–80
invasive hemodynamic assessment, 74–78
peripheral arterial wave summation and zero drift, 85–87
Cardiac tamponade
AIDS-related non-Hodgkin’s lymphoma, 279–280
left ventricular outflow tract obstruction, 316–318
chronic aortic insufficiency, 92–93
combined mitral/aortic stenosis, 124–128
delayed or late rising central pressure, 12–15
hypertrophic obstructive cardiomyopathy, alcohol septal ablation, 326–331
percutaneous balloon valvuloplasty, aortic stenosis, 175–177
ventricularization vs., 340–342
First-degree atrioventricular (AV) conduction abnormalities, simultaneous left/right ventricular pressure measurements, pacemaker pressure responses, 52–53
Fractional flow reserve (FFR)
coronary hyperemia, 349–354
dobutamine, 351
diffuse coronary disease, 357–358
guidewire pressure measurements, 353
intermediate stenosis assessment, 354
intracoronary pressure and, 353
intravascular ultrasound and, 353–356
ischemic thresholds, 354
left anterior descending artery, 360–363
left main coronary artery disease, 357
assessment methods, 367–376
multivessel disease, 356–357
myocardial infarction, post-infarction coronary pressure and flow, 358–363
myocardial perfusion imaging, 354–355
ostial lesions and “jailed” side branches, 358
percutaneous coronary intervention outcomes, 358
pressure pullback, 353–354
reference coronary vascular resistance (rCVR), 363–364
renal artery stenosis hemodynamics, 379–384
serial (multiple) lesions, single vessels, 357
Frank Starling mechanism, pulsus alternans, 64–66
Gorlin equation
aortic stenosis, aortic valve area calculations, 78–81
Cui simplified mitral valve gradient calculation technique, 161–162
mitral valve area calculations, 137
heart rate influence on, 141–142
mitral stenosis and regurgitation, 139
transvalvular left ventricular outflow tract gradient, valvular prosthetics, 130–134
Guidewire pressure measurements, fractional flow reserve, 353
Hakki formulae
mitral valve gradient estimation, 161–162
“quick” valve area estimates, mitral valve area calculations, 137
Heart murmurs
atrial septal defect, left ventricular diastolic dysfunction, 399–400
chronic aortic insufficiency, 90–91
mitral valve replacement, 117–118
ventricular septal defect, post-surgical mitral insufficiency and subaortic stenosis, 403–408
Heart rate
mitral valve area calculations and, 141–142
pressure wave artifacts, 10–11
Hemodynamic pressure tracings
acute aortic insufficiency, 92–94
aortic regurgitation, 99–102
Hemodynamic pressure tracings (Continued)

aortic root disease, case study, 105–109
aortic stenosis
  aortic and left ventricular artifacts, 81–85
echocardiography, 71–73
  invasive techniques, 72–78
cardiac tamponade, AIDS-related non-Hodgkin’s lymphoma, 281
  chronic aortic insufficiency, 89–90
combined mitral/aortic stenosis, 123–128
  compressive pericardial hemodynamics
  atrial waves, 256
  constrictive vs. restrictive physiology, 257–258
diastolic plateau, 254
epidemiology, 253
Kussmaul’s sign, 257
  low pressure tamponade, 255–256
M configuration mechanisms, 256–257
  renal failure patients, 253–254
constrictive pericardial disease, 231–237
  complex patient, 284–286
  empty pericardium, 261–266
  pericardiocentesis, 262
  post-surgical constrictive pericardial disease, 247–251
respiratory dynamics, 240–242
  right-heart murmer, inspiratory augmentation, 266–267
double prosthetic valve stenosis, left ventricular puncture, 155–160
hypertrophic obstructive cardiomyopathy, alcohol septal ablation,
  pre and post-period data, 324–327
mitral balloon valvuloplasty, 223–227
  mitral regurgitation, 163–166
  aortic valvuloplasty, 205–209
mitral stenosis, pulsat alternans, 145–147
mitral valve replacement, post-replacement murmurs, 117–119
multivalvular lesions, postsurgical tracings, 121–122
pacemaker hemodynamics
  atrial waves, 301–302
  dissociated atrial activity and hemodynamic function, 302–304
  normal and paced atrial systoles and left ventricular pressure, 304–305
  simultaneous left/right ventricular pressure measurements, 52–53
ventricular hemodynamics, clinical significance, 305–306
percutaneous balloon valvuloplasty screening
  aortic stenosis, 174–183
  mitral stenosis, 183–188
prothetic valves
  dysfunction assessment, 152–153
  stenotic bioprosthetic valves, 149–150
  transvalvular left ventricular outflow tract gradient, 129–134
  right ventricular infarction, 435–436
  simultaneous left/right ventricular pressure measurements, 49
  ventricular filling physiology, 237–239
  ventricular septal defect, mitral insufficiency and subaortic stenosis,
  403–408
ventricular unloading, nitroglycerin effects, 55–57

Hemodynamics, historical review, xvi–xix

Hepatojugular reflex, low pressure tamponade, Kussmaul’s sign,
  290–291
“Hit-and-run” maneuver, ventricularization case study, 339–340, 342

Hyperemia
  coronary hemodynamics, 349–354
  pharmacologic agents for, 350–352
Hyperemic systolic pressure gradient (HSPG), renal artery stenosis
  hemodynamics, 379–384

Hypertension, simultaneous left/right ventricular pressure measurements, 49–50

Hypertrophic cardiomyopathy
  left ventricular end-diastolic pressure diagnosis of, 44–45
  low-output hypotension, LV afterload increase, 452

Hypertrophic obstructive cardiomyopathy (HOCM)
  alcohol-induced septal infarction, 322–327
    complications, 331–334
  TASH case study, 322–324
  Valsalva maneuver, TASH case study, 324–327
alternative therapies
  dual-chamber pacing, 327–328
  induced septal infarction, 329–331
  surgical septal myectomy, 328–329
  disappearing aortic stenosis, 309–318
  dynamic LVOT gradients, 314–317
  intracavitary pressure differences, 309–311
  intramyocardial pressure, intraventricular pressure gradients,
  317–318
  preload alterations and intraventricular gradients, 311–314
  dual-chamber pacing and Valsalva maneuver hemodynamics,
  318–322
  left-heart inflow obstruction, blood volume increase,
  451–452
  right-heart inflow obstruction, blood volume increase, 451
  right ventricular outflow decrease, 451

Impulse-type gradients, aortic stenosis, 80–83

Inferior vena cava (IVC) pressure, tricuspid regurgitation, 20–21
Inoue balloon valvuloplasty, mitral balloon valvuloplasty with left-
  heart catheterization, prosthetic valves, 223–227
Intermediate stenosis assessment
deferral of PTCA and, 354, 356
  intracoronary pressure measurements, 354
Interventricular conduction defect, simultaneous left/right ventricular pressure measurements, 50–51
Intracardiac pressures
  compressive pericardial hemodynamics, low pressure tamponade,
  255–256
  constrictive physiology, 234–235, 237–239
Intarcavitary pressure differences, hypertrophic obstructive cardiomyopathy, elicitation of, 309–311
Intracoronary blood flow velocity measurements
  Doppler catheters, 343–344
  myocardial infarction, post-infarction coronary pressure and flow
  measurement, 359–363
Intracoronary pressure measurements, clinical applications, 354–363
  coronary physiology and myocardial perfusion imaging, 354–355
  FFR and IVUS measurements, 355–356
  intermediate stenosis assessment, 354
  ischemic thresholds, 354
left main coronary artery disease, 357
multivessel disease, FFR measurements, 356–357
ostial and “jailed” side lesions, FFR measurements, 358
post-myocardial infarction, 358–363
post-PCI FFR, 358
single vessel serial (multiple) lesions, 357–358
Intramyocardial pressure, hypertrophic obstructive cardiomyopathy,
intraventricular pressure gradients, 317–318
Intrapericardial pressure
cardiac tamponade, phases, 271–273
post-transplant cardiac tamponade, pericardial fluid, 270–271
Intrathoracic pressure, constrictive physiology, 234–235, 237–239
Intravascular ultrasound (IVUS)
coronary vasodilatory reserve, 352–354
fractional flow reserve measurements, 355–356
left main coronary artery stenosis, assessment methods, 367–376
renal artery stenosis hemodynamics, 379–384
Intraventricular conduction defect, simultaneous left/right ventricular
pressure measurements, 50–51
Intraventricular pressure gradients, hypertrophic obstructive cardiomyopathy
elicitation of, 309–311
intramyocardial pressure, 317–318
preload alterations, 311–314
Invasive hemodynamic assessment
aortic stenosis, 72–78
dyspnea evaluation, 447–448
mitral valve regurgitation, 163–166
right-heart failure evaluation, 458
valvular prosthetics, transvalvular left ventricular outflow tract
gradient, 132–134
Ischemic thresholds, intracoronary pressure measurements, 354
Isoproterenol infusion, hypertrophic obstructive cardiomyopathy,
disappearing aortic stenosis, 310–318
Jailed side branch assessment, fractional flow reserve measurements, 358
Jugular venous pressure (JVP)
low-output hypotension, preload alterations, 450–451
right-heart failure evaluation
algorithmic evaluation, 455–457
physical examination, 455
tricuspid regurgitation, 20–21
Kaplan-Meier freedom from cardiac death estimate, left main coronary
artery stenosis, 375–376
Korotkoff sounds, pulsus alternans, 63
Kussmaul’s sign
compressive pericardial hemodynamics, 258
constrictive physiology, 231–233, 236–237
post-surgical constrictive pericardial disease, 247–250
etiology, 289–290
low pressure tamponade, 290–291
pulmonary hypertension differential diagnosis, 458
right-heart failure evaluation, right ventricular enlargement, 456–457
tricuspid valve, right atrial pressure artifacts, 31
Laplace’s law, chronic aortic insufficiency, hemodynamic
pathophysiology, 90
Late systolic gradients, hypertrophic obstructive cardiomyopathy,
314–318
Left anterior descending artery (LAD)
acute aortic insufficiency, 111–115
coronary vascular resistance measurements, 360–363
left main coronary artery stenosis, assessment methods, 367–376
Left arterial (LA) pressure
left-sided V wave, 35–36
disparate pulmonary capillary wedge pressure and, 39–40
mitral stenosis and regurgitation, 38–39
mitral valve gradients, mitral stenosis and valvuloplasty, 199–200
Left atrial disease, dyspnea evaluation, 445–446
Left atrial (LA) pressure
aortic regurgitation, 119–120
aortic stenosis, elderly patients, aortic valvuloplasty, 211–215
cardiac arrhythmias, 296–299
constrictive pericardial disease, 283–286
dobutamine stress testing, mitral valve gradients, 217–221
double prosthetic valve stenosis, left ventricular puncture, 157–160
mitral regurgitation, aortic valvuloplasty, 205–209
mitral stenosis
mitral balloon valvuloplasty with left-heart catheterization,
prosthetic valves, 223–227
pulsus alternans, 146–147
mitral valve area calculations, 136–137, 141–142
mitral valve gradients, 135–136
mitral valve regurgitation, invasive hemodynamic assessment, 163–166
percutaneous balloon valvuloplasty
aortic stenosis, 174–183
mitral stenosis, 182, 184–185
prosthetic valves, 151–153
Left bundle branch block, simultaneous left/right ventricular pressure
measurements, pacemaker pressure responses, 52–53
Left-heart catheterization
constrictive physiology, 242–243
prosthetic aortic valves, mitral balloon valvuloplasty with, 223–227
Left-heart hemodynamic protocols
historical review, xx
prosthetic valves, stenotic bioprosthetic valves, 149–150
Left-heart inflow obstruction, low-output hypotension, 451–452
Left main coronary artery (LMCA) stenosis
fractional flow reserve measurement, 357
hemodynamic/IVUS assessment, overview of methods, 367–376
ventricularization
case study, 339–342
mechanisms, 341–342
Left-sided V wave
atrial systole, 37
disparate pulmonary capillary wedge/atrial pressures, 39
mitral regurgitation, large V wave, 37
morphology, 37–39
normal A and V patterns, 33–35
pulmonary capillary wedge/left ventricular end-diastolic pressures, 35–36
size factors, 36–37
wave alternans, 33
Left ventricle diastolic dysfunction
atrial septal defect, 399–400
dyspnea evaluation
pressure elevations, 446–447
primary left atrial disease, 445–446
Left ventricular end-diastolic pressure (LVEDP)
acute aortic insufficiency, 94
basic principles, 43–44
chronic aortic insufficiency, 89–90

INDEX 465
Left ventricular end-diastolic pressure (LVEDP) (Continued)
diagnostic applications, 43–45
influences on, 45–47
Left ventricular end-diastolic volume (LVEDV), chronic aortic
insufficiency, 89–90
Left ventricular (LV) pressure
acute aortic insufficiency, 92, 94–95
case study, 114–115
diastolic murmur, 119–120
systolic/diastolic murmurs, 97–99
transient acute aortic regurgitation, 102–103
aortic root reconstruction, 106–109
aortic stenosis
elderly patients, aortic valvuloplasty, 211–215
hemodynamic artifacts, 81–85
impulse-type gradients, 80–83
invasive hemodynamic assessment, 74–78
cardiac arrhythmias, 296–299
cardiac tamponade, left ventricular outflow tract obstruction, 316–318
chronic aortic insufficiency, 90–91
combined mitral/aortic stenosis, 124–128
constrictive physiology, 231–237
post-surgical constrictive pericardial disease, 247–250
respiratory hemodynamic criteria, 240–242
delayed or late rising artifacts, 12–15
dobutamine stress testing, mitral valve gradients, 217–221
double prostatic valve stenosis, left ventricular puncture, 158–160
hypertrophic obstructive cardiomyopathy
alcohol septal ablation, 322–324, 328–331
diastolic waveform abnormalities, relaxation impairment, 318–319
disappearing aortic stenosis, 309–311
dual-chamber pacing and Valsalva maneuver, 318–322
Valsalva maneuver, 312–314, 316
left-side V wave, 33–35
diastolic pressures, 35–36
mitral stenosis and regurgitation, 37–39
low-output hypotension
afterload increase, 452
diminished contractility, 452
mitral regurgitation, 163–166
aortic valvuloplasty, 205–209
mitral stenosis
mitral balloon valvuloplasty with left-heart catheterization, prosthetic valves, 223–227
pulsus alternans, 144–147
mitral valve area calculations, 136–137, 141–142
mitral valve gradients, 135–136
mitral stenosis and valvuloplasty, 199–200
nitroglycerin effects, 55–57
pacemaker hemodynamics, 305–306
percutaneous balloon valvuloplasty
aortic stenosis, 174–177
mitral stenosis, 182, 184–185
post-transplant cardiac tamponade, pericardial fluid, 270–271
premature ventricular contractions, 295–296
pressure wave artifacts, 10–11
prosthetic valves, 151–152
pulmonic stenosis, 169–170
pulsus alternans, 63–64, 64–66
right ventricular infarction, 435–436
simultaneous left/right ventricular pressure measurements
conduction effects, 50–51
hemodynamic technique, 49
hypertension patients, 49–50
mitral stenosis patients, 53
pacemaker responses, 52–53
transiently wide pulse pressure, episodic aortic insufficiency, 11–13
valvular prosthetics, transvalvular left ventricular outflow tract
gradient, 130–134
Left ventricular outflow tract (LVOT)
cardiac tamponade obstruction, 316–318
hypertrophic obstructive cardiomyopathy
alcohol septal ablation, pre and post-period data, 325–327
dual-chamber pacing and Valsalva maneuver, 320–322
dynamic gradients, 314–318
ventricular septal defect, post-surgical mitral insufficiency and
subaortic stenosis, 403–408
Left ventricular puncture, double prostatic valve stenosis, 155–160
Low-output hypotension, bedside evaluation
cardiac arrhythmias, 449
carotid waveform analysis, 452–453
diminished stroke volume, 449
left ventricular outflow decrease, 452
low systemic vascular resistance, 449
preload assessment compliance, 449–450
preload reduction
blood volume decrease, 450–451
left-heart inflow obstruction, blood volume increase, 451–452
right-heart inflow obstruction, blood volume increase, 451
right ventricular outflow decrease, 451
Low pressure tamponade
compressive pericardial hemodynamics, 255–256
Kussmaul’s sign, 290–291
Magnetic resonance angiography, renal artery stenosis hemodynamics,
380–384
Malignant pericardial effusion, cardiac tamponade, AIDS-related non-
Hodgkin’s lymphoma, 279–280
“M” configuration
compressive pericardial hemodynamics, 256–257
constrictive physiology, 231–233, 236–237
post-surgical constrictive pericardial disease, 247–250
double prostatic valve stenosis, left ventricular puncture, 157–160
right-heart failure evaluation, right ventricular enlargement, 456–457
right-heart murmur, inspiratory augmentation, 266–267
triscupid valve, right atrial-ventricular gradients, 29–31
Mean left atrial pressure (MLAP), Cui simplified mitral valve gradient
calculation technique, 161–162
Mean left ventricular pressure (MLVP), Cui simplified mitral valve
gradient calculation technique, 161–162
Mean valve gradient (MVG), aortic valve area, aortic regurgitation,
acute aortic insufficiency, 95–96
MIBI-SPECT analysis, multivessel disease, FFR measurements,
356–357
Mitrail balloon valvuloplasty, aortic prosthetic valves, left-heart
catheterization with, 223–227
Mitrail insufficiency, ventricular septal defect, subaortic stenosis,
403–408
Mitrail regurgitation
aortic valvuloplasty, hemodynamic technique, 205–209
dyspnea evaluation, 446
hemodynamic pressure tracings, 120–122
invasive hemodynamic assessment, 163–166
large left sided V wave and, 37–39
mitral stenosis and, 139
percutaneous mitral balloon valvuloplasty, 188, 200–201
post-valvular replacement murmurs, 117–119
Mitral stenosis. See also Combined mitral/aortic stenosis
dyspnea evaluation, 446
epidemiology, 135

mitral valve area calculations, 136–137
nitroglycerin effects, ventricular unloading, 56–57
pacemaker hemodynamics, atrial waves, 301–302
percutaneous balloon valvuloplasty, mitral valve gradients, 201–203
post-transplant cardiac tamponade, pericardial fluid, 270–271
premature ventricular contractions, 295–296
pressure wave artifacts, 9–11
prosthetic valves, 151–153
pulsum alternans, 64–66
right-heart hemodynamics, 18–19
tricuspid regurgitation, 20–21
ventricular septal defect, mitral insufficiency and subaortic stenosis, 403–408
Pulmonary hypertension, right-heart failure evaluation
differential diagnosis, 457–458
right ventricular enlargement, 457
Pulmonary valve
diastolic murmur/right ventricular end-diastolic pressure elevation, 170–171
lesion classifications, 167
stenosis
chronic aortic insufficiency, 169–170
diagnostic criteria, 167–168
ECG abnormalities, 168–169
pulmonary balloon valvuloplasty, 193–195
Pulmonary valvulotomy, post-surgical constrictive pericardial disease, 247–250
Pulmonary wedge (PW) pressure
combined mitral/aortic stenosis, 123–128
constrictive physiology, respiratory hemodynamic criteria, 241–242
Pulmonic gradient, pulmonary balloon valvuloplasty, 188–195
Pulmonic insufficiency, pulmonary balloon valvuloplasty, 193–195
Pulsatile venous waves, tricuspid valve, 27–28
Pulse pressure readings, acute aortic insufficiency, 114–115
Pulsus alternans
acute aortic insufficiency, 115
case study, 63–64
left-sided V wave, 33
mechanisms of, 64–66
mitral valve gradients, mitral stenosis, 143–147
Pulsus bigeminus, defined, 63
Pulsus paradoxus
cardiac tamponade, 273–275
AIDS-related non-Hodgkin’s lymphoma, 277–279
defined, 63–64
etiology, 289–290
low pressure tamponade, 290–291
P waves
cardiac arrhythmias, 298–299
double prosthetic valve stenosis, left ventricular puncture, 156–160
mitral valve regurgitation, 120–122
pacemaker hemodynamics, atrial waves, 301–302
right-heart hemodynamics, 17–19
simultaneous left/right ventricular pressure measurements, pacemaker pressure responses, 52–53
QRS rhythms
cardiac arrhythmias, wide QRS patterns, 298–299
premature ventricular contractions, 296
right-heart hemodynamics, 17–19
right heart ventricular infarction, 431
“Quick” valve area estimates, mitral valve area calculations, 137
Quincke’s pulse, aortic regurgitation, 99
RAO fluoroscopic image, constrictive pericardial disease, 284–286
Reference coronary vascular resistance (rCVR)
coronary hemodynamics applications, 363–364
post-myocardial infarction, 359–363
Relaxation impairment, hypertrophic obstructive cardiomyopathy, diastolic waveform abnormalities, 318–319
Renal artery stenosis (RAS), hemodynamic analysis, methods, 379–384
Renal failure
- cardiac tamponade, pulsus paradoxus, 273–275
- compressive pericardial hemodynamics, 253–254
- hemodynamic analysis, theoretical background, 379
Reperfusion, right heart ventricular infarction, 432
Respiratory dynamics
- constrictive physiology, 231–237
- hemodynamic criteria, 240–242
- post-surgical constrictive pericardial disease, 250–251
- coronary blood flow velocity, Doppler measurements, 345–348
Resting systolic pressure gradient, renal artery stenosis hemodynamics, 380–384
Restrictive cardiomyopathy
- compressive pericardial hemodynamics and, 258–259
- constrictive physiology, 235–237
- Doppler flow criteria, 239–240
- post-surgical constrictive pericardial disease, 249–250
- ventricular filling physiology, 237–239
Rheumatic heart disease
- mitral stenosis, mitral valve gradients, dobutamine testing, 217–221
- prosthetic valves, mitral balloon valvuloplasty with left-heart catheterization, 239–240
Right atrial contraction, right ventricular infarction (RVI), 430–431
Right atrial (RA) pressure
- cardiomyopathies, 296–299
- cardiac tamponade
  - AIDS-related non-Hodgkin’s lymphoma, 277–279
  - phases, 271–273
  - post-transplant pericardial fluid, 269–271
  - pulsus paradoxus, 273–275
- combined mitral/aortic stenosis, 123–128
- compressive pericardial hemodynamics
  - renal failure, 253–254
  - waveform interpretation, 256–259
- constrictive physiology, 231–233
- pericarditis, complex patient, 283–286
- post-surgical constrictive pericardial disease, 247–250
- double prosthetic valve stenosis, left ventricular puncture, 157–160
- Kussmaul’s sign, 289–291
- mitral stenosis, pulsus alternans, 143–147
- pacemaker hemodynamics, 301–305
- pericardiocentesis, 262–266
- right-heart failure evaluation
  - physical examination, 455
  - right ventricular enlargement, 456–457
  - right-heart hemodynamics, 17–19
  - right ventricular infarction, 435–436
  - right ventricular infarction (RVI), 429–430
- tricuspid valve
  - artifacts, 29–31
  - cardiac rhythm, 24–26
  - gradient properties, 27–31
  - normal right atrial waveform, 23
  - regurgitation, 20–21
- Right-heart catheterization, constrictive physiology, 242–243
- Right-heart hemodynamic protocols
  - aortic root reconstruction, 105–109
  - combined mitral/aortic stenosis, 123–128
  - historical review, xix–xx
  - hypertrophic obstructive cardiomyopathy, dual-chamber pacing and Valsalva maneuver, 318–322
  - invasive procedures, 458
  - jugular venous pressure and RA waveform
    - algorithmic evaluation, 455–457
    - physical examination, 455
    - Kussmaul’s sign, 289–291
    - nitroglycerin effects, ventricular unloading, 56–57
    - pitfalls of, 17–21
    - prosthetic valves, stenotic bioprosthetic valves, 149–150
    - pulmonary hypertension, differential diagnosis, 457–458
    - pulmonic stenosis, 168–170
    - simultaneous left/right ventricular pressure measurements, 49–50
    - tricuspid regurgitation, vena caval pressure, 19–21
- Right-heart inflow obstruction, low-output hypotension, 451
- Right-heart murmur, inspiratory augmentation, 266–267
- Right ventricular diastolic collapse, constrictive pericardial disease, 261–266
- Right ventricular diastolic pressure (RVSP), right ventricular infarction (RVI), 429–430
- Right ventricular end-diastolic pressure
  - constrictive physiology, 233–234
  - pulmonary valve, 170–171
- Right ventricular enlargement, right-heart failure evaluation, jugular venous pressure elevation, 455–457
- Right ventricular free wall (RVFW) perfusion, right heart ventricular infarction
  - diastolic dysfunction, 429–430
  - outcomes, 434
  - reperfusion impact, 432
- Right ventricular infarction (RVI), hemodynamic analysis
  - augmented contraction, 430–431
  - case studies, 433–434
  - differential diagnosis, 432–433
  - epidemiology, 429–430
  - mechanical complications, 432
  - performance determinants, 430
  - reperfusion effects, 432
  - rhythm disorders and reflexes, 431–432
- Right ventricular outflow track gradient, pulmonary balloon valvuloplasty, 191–193
- Right ventricular (RV) pressure
  - acute aortic insufficiency, 92, 94
  - aortic root reconstruction, 107–109
  - cardiomyopathies, 296–299
  - combined mitral/aortic stenosis, 123–128
  - compressive pericardial hemodynamics, 258–259
  - renal failure, 253–254
  - constrictive physiology, 231–237
  - respiratory hemodynamic criteria, 240–242
  - double prosthetic valve stenosis, left ventricular puncture, 157–160
  - hypertrophic obstructive cardiomyopathy, alcohol septal ablation, 322–324
  - left ventricular end-diastolic pressure interpretation, 46–47
  - low-output hypotension, outflow reductions, 451
  - mitral stenosis, pulsus alternans, 143–147
  - pacemaker hemodynamics, 302–305
  - percutaneous balloon valvuloplasty, mitral stenosis, 186–188
  - post-transplant cardiac tamponade, pericardial fluid, 269–271
  - pulmonary balloon valvuloplasty, 188–195
  - pulmonic stenosis, 169–170
  - pulsus alternans, 64–66
  - right-heart hemodynamics, 18–19
  - right ventricular infarction, 435–436
  - simultaneous left/right ventricular pressure measurements
    - conduction effects, 50–51
    - hemodynamic technique, 49
Ringing artifacts
  aortic stenosis, aortic and left ventricular pressure tracings, 81–85
  waveform interpretation, 9–10
R-R cycle
  constrictive physiology, 243–244
  coronary blood flow velocity measurements, atrial fibrillation, 346, 348–349
double prosthetic valve stenosis, left ventricular puncture, 157–160
  mitral valve area calculations and, 141–142
  premature ventricular contractions, 296
  pressure wave artifacts, 10–11
  simultaneous left/right ventricular pressure measurements, mitral stenosis, 53
  waveform interpretation, xxi–xxii
RV index, constrictive physiology, respiratory hemodynamic criteria, 241–243
Selding catheter insertion technique, double prosthetic valve stenosis, left ventricular puncture, 159–160
Sensitivity values, constrictive physiology, post-surgical constrictive pericardial disease, 250–251
Septal ablation. See Transcoronary ablation of septal hypertrophy (TASH)
  Septal myectomy, hypertrophic obstructive cardiomyopathy
dual-chamber pacing and Valsalva maneuver, 318–322
  surgical procedures, 328–329
Serial (multiple) lesions, single vessels, FFR measurements, 357
  Simultaneous left/right ventricular pressure measurements
  conduction effects, 50–51
  hemodynamic technique, 49
  hypertension patients, 49–50
  mitral stenosis patients, 53
  pacemaker responses, 52–53
Single-catheter pulback, aortic stenosis, invasive hemodynamic assessment, 76–78
Single-vessel stenosis, serial (multiple) lesions, FFR measurements, 357
  Sinus tachycardia, acute aortic insufficiency, 111–115
  Smooth muscle contraction, nitroglycerin effects, 61–62
  Sodium nitroprusside, coronary hyperemia, 352
  Specificity values, constrictive physiology, post-surgical constrictive pericardial disease, 250–251
  Spectral analysis, Doppler signals, coronary flow velocity measurements, 344–345
  Stenotic bioprosthetic valves, hemodynamic evaluation, 149–150
Stenting procedures
  myocardial infarction, post-infarction coronary pressure and flow, 359–363
  reference coronary vascular resistance (rCVR), 363–364
Stepwise Inoue balloon technique
  percutaneous balloon valvuloplasty, mitral stenosis, 183, 186
  pulmonary balloon valvuloplasty, repaired congenital heart, 191
  Stiffness, left ventricular end-diastolic pressure interpretation, 46–47
  Stress testing
    coronary physiology, 354–355
    mitral valve gradients, dobutamine stress testing, 217–221
  Stroke volume (SV), low-output hypotension, 449
ST segment depressions, acute aortic insufficiency, 111–115
ST segment elevation, right ventricular infarction diagnosis, 433
Subaortic stenosis, ventricular septal defect, mitral insufficiency and, 403–408
Subclavian stenosis and coarctation, delayed or late rising pressure, 14
Superior vena cava (SVC) obstruction, jugular venous pressure elevation, 455–457
Supravalvular stenosis, valvular prosthetics, transvalvular left ventricular outflow tract gradient, 129–134
S wave, tricuspid valve
  pulsatile venous waves, 27–28
  regurgitation, 118
Systemic vascular resistance (SVR), low-output hypotension, 449
  Systolic ejection period (SEP), aortic valve area, aortic regurgitation, acute aortic insufficiency, 95–96
Systolic gradients
  hypertrophic obstructive cardiomyopathy, dynamic LVOT gradients, 314–318
  low-output hypotension, outflow reductions, 451
  pacemaker hemodynamics, 304–306
  pulmonary balloon valvuloplasty, 191–193
Systolic murmur
  aortic regurgitation, 97–99
  chronic aortic insufficiency, 90–91
  percutaneous balloon valvuloplasty, mitral stenosis, 185–187
Tetralogy of Fallot, pulmonary balloon valvuloplasty, 191
Tilting disk valves, double prosthetic valve stenosis, left ventricular puncture, 159–160
Time line presentations, pressure wave artifacts, 11–12
Torsade de Pointes, coronary blood flow velocity measurements, 348–349
Tralp’s sign, aortic regurgitation, 98–99
Transcoronary ablation of septal hypertrophy (TASH), hypertrophic obstructive cardiomyopathy, 322–327
  case study, 322–324
  complications, 331–334
  outcomes and complications, 329–334
  Valsalva maneuver, TASH case study, 324–327
Transeosophageal echocardiography (TEE)
  atrial septal defect, left ventricular diastolic dysfunction, 399–400
  prosthetic valve assessment, 152–153
  transient acute aortic regurgitation, hemodynamic pathophysiology, 102–103
  Transiently wide pulse pressure, episodic aortic insufficiency, 11–13
  Transplant complications, post-transplant cardiac tamponade, pericardial fluid, 269–271
Transpulmonic gradients, pulmonary balloon valvuloplasty, residual gradients, 191–193
Transeptal catheterization, constrictive pericardial disease, complex patient, 284–286
Transthoracic echocardiography, prosthetic valve assessment, 152–153
Transvalvular gradients, aortic stenosis, elderly patients, aortic valvuloplasty, 211–215
  Transvalvular left ventricular outflow tract gradient
    percutaneous balloon valvuloplasty, post-dilatation hemodynamics, 180–183
    valvular prosthetics, assessment, 129–134
Tricuspid valve
  cardiac rhythm and right atrial pressure, 24–25
  normal right atrial waveform, 23
  pulsatile venous waves, 27–28
  regurgitation
    hemodynamic pressure tracings, 118
Tricuspid valve (Continued)
- right heart ventricular infarction, 432
- right ventricular enlargement, 457
- systolic regurgitant waves, 25–27
- vena caval pressure waveforms, 19–21
- right atrial pressure artifacts, 31
- right atrial-right ventricular gradients, 29–31
- stenosis, cardiac arrhythmias, 296–299
- systolic regurgitant waves, 25–27
- “X” and “Y” troughs, 23–24
- Trisomy 21, ventricular septal defect, mitral insufficiency and subaortic stenosis, 403–408
- Two-dimensional echocardiographic planimetry, mitral valve area calculations, 141

Underdamped waveform, pressure wave artifacts, 9–10
Valvular prosthetics. See Prosthetic valves
Valvuloplasty
- aortic regurgitation, 102–103
- mitral regurgitation, aortic valvuloplasty, 205–209

Ventricular arrhythmias
- coronary blood flow velocity measurements, 348–349
- hypertrophic obstructive cardiomyopathy, alcohol septal ablation, 324–327
- disappearing aortic stenosis, 310–318
- dual-chamber pacing, 318–322
- outcomes and complications, 329–334
- preload alterations and intraventricular gradients, 311–318
- left ventricular end-diastolic pressure, diagnostic applications, 43–45

Waveform interpretation
- acute aortic insufficiency, 111–115
- aortic regurgitation, 97–99
- aortic stenosis
  - invasive hemodynamic assessment, 72–78
  - peripheral arterial wave summation and zero drift, 85–87
- cardiogenic shock, 296–299

- comprehensive pericardial hemodynamics, 256
- coronary flow velocity measurements, 344–345
- historical review, xix
- nitroglycerin effects, aortic pressure, 60–62
- pacemaker hemodynamics
  - atrial waves, 301–305
  - ventricular waves, 305–306

Tricuspid valve
- normal right atrial waveform, 23
- pressure wave artifacts, 9–16
- calibration errors, 9–11
- delayed/late rising central aortic pressure, 12–15
- disequilibrium, 16
- transiently wide pulse pressure, 11–12
- under- and overdamped waveform, 9
- pulsatile venous waves, 27–28
- review procedures, xxi–xxii
- systolic regurgitant waves, 25–27
- vena caval pressure waveforms, tricuspid regurgitation, 19–21
W configuration
  compressive pericardial hemodynamics, 256
  constrictive physiology, 231–233, 236–237
  right heart ventricular infarction, 431
Wide QRS patterns, cardiac arrhythmias, 298–299

X-descent
  right-heart failure evaluation, right ventricular enlargement, 456–457
  right ventricular infarction (RVI), 431
  X trough, tricuspid valve, 23–24

Y-descent
  cardiac tamponade, AIDS-related non-Hodgkin’s lymphoma, 277–279
  compressive pericardial hemodynamics, 256
  M configuration mechanism, 256–257
  constrictive physiology, 233–234
  pericarditis, complex patient, 284–286
  post-transplant cardiac tamponade, pericardial fluid, 269–271
  right-heart failure evaluation, right ventricular enlargement, 456–457
  Y trough, tricuspid valve, 23–24
  Zero drift, aortic stenosis, peripheral arterial wave summations, 85–87
  Z point, left ventricular end-diastolic pressure interpretation, 45–47
