Chapter Abstracts  xvii
Preface and Acknowledgments  xxi
Notes on Contributors  xxv
List of Tables  xxix
List of Figures  xxx

1 Collaborating with Stakeholders  1
Larry J. Zimmerman and Kelly M. Branam

Introduction  1
What and Who Is an Archaeological Stakeholder?  2
Collaboration Comes in Many Forms  4
Learning to Work with Stakeholders: A Discipline’s Journey  7
Differing Ways of Knowing the Past  11
   True or valid?  11
   How can there be different versions of the same past?  12
General Thoughts about How to Consult with Stakeholders  13
   Building trust takes time  14
   Use ethnography  15
Specific Issues and Concerns  15
   Differential power levels  15
   Competing claims  15
   Informed consent  17
2 Stratigraphy
Jane Balme and Alistair Paterson

Introduction 26
What Is Stratigraphy? 27
Why Do Archaeologists Study Stratification? 27
How Do Different Layers Occur in Archaeological Sites? 27
Principles (or Laws) of Stratigraphy 29
Sources of disturbance 30
Excavation and Stratigraphy 32
Recording Stratification 33
The Harris Matrix: Interpreting the spatial record 34
Creating Analytical Units 37
Case Study 2.1: Sos Höyük 38
Conclusions 44
Acknowledgments 44
Further Reading 44
Excavation 44
Stratigraphy and formation processes 44
References 44

3 Sediments
Anthony Barham and Gary Huckleberry

Introduction 47
Why Study Soils and Sediments? 48
Sediments and Soils – Defining Concepts and Terms 50
Field Description and Sampling 51
Broad principles which should be applied during sediment sampling and description 53
Laboratory Techniques
Granulometry 55
pH (acidity/alkalinity) 60
Color 62
Organic matter 63
Phosphorus 65
Case Study 3.1: Prehistoric Canals in the American Southwest 67
Case Study 3.2: Kennewick Man, Washington State, United States 72
Conclusions 76
Further Reading 77
References 77

4 Absolute Dating 85
Simon Holdaway
Introduction 85
Chronometry 86
Radiocarbon 86
Dendrochronology 90
Isotopic methods 91
Radiogenic methods 92
Chemical and biological methods 94
Geomorphologic methods 95
Limits on Chronometric Techniques 96
Maximum limits 96
Minimum limits 98
Limits on radiogenic techniques 100
Precision 101
From Age Measurement to Chronology 101
Temporal Resolution and Behavioral Variation 103
Fidelity and resolution 104
Bayesian analysis 105
Time averaging 106
Case Study 4.1: Bone Cave 108
Time perspectivism 110
Conclusion 110
Acknowledgments 111
Further Reading 111
References 111
5 Rock Art
Jo McDonald

Introduction 118
What Is Rock Art? 118
How is Rock Art Made?
Classification 120
How Is Rock Art Recorded?
Photography 123
Drawing and sketching 124
Tracing 124
Counting 127
How and Why Is Rock Art Analyzed?
Informed Methods 129
Formal (or Structural) Methods 129
Statistical techniques 130
Spatial distribution analysis 130
Information exchange and stylistic heterogeneity 131
Diachronic change 131
Dating Rock Art 132
Relative dating 132
Scientific techniques 135
Gender and Rock Art 135
Case Study 5.1: The Depiction of Species in Macropod Track Engravings 136
Concluding Remarks 142
Resources 142
Key associations and journals 143
Further Reading 143
References 143

6 An Introduction to Stone Artifact Analysis
Chris Clarkson and Sue O’Connor

Introduction 151
An overview 151
Analyzing Stone Artifacts
Research design 167
Classifying an assemblage of stone artifacts 168
Choosing attributes to record and measure 173
Managing data 176
Measuring extent of reduction 177
Dealing with difficult assemblages 187
Archaeometry 191
Determining the type and flaking properties of stone 192
Sourcing stone artifacts 192
Is 3D the future of lithic analysis? 193

Conclusion 194

Acknowledgments 195

Further Reading 195

References 195

7 Ceramics 207
Linda Ellis

Introduction 207

What Is a “Ceramic?” 209

How Is Pottery Made? 210
Clay preparation 210
Object formation 211
Prefire decoration 211
Firing 212
Postfire treatment 212

Handling of Ceramics during and after Excavation 213
Careful excavating 213
Cleaning ceramics 214
Marking ceramics 214
Repairing ceramics 215

Initiating an Analytical Program for Ceramics 215
Prefatory issues before undertaking an analytical program 216
Quantitative analysis of ceramics 216
Sampling for laboratory analysis 219
How to begin analysis and select an appropriate analytical method 220

Areas of Ceramics Research and Their Analytical Approaches 221
Technology studies 224
Identifying the people producing and using ceramics 225
Dating of ceramics 226
Sourcing of ceramics 227
Usewear and use-life studies of ceramics 228

Conclusion 229

Resources 229

References 229
8 Residues and Usewear

Richard Fullagar

Introduction 232
Functional Analysis 233
Methodology, Experiments, and Procedures 234
Microscopes 238
Artifact Cleaning 239
Plant Residues Found on Artifacts 241
  Starch 241
  Raphides 242
  Phytoliths 242
  Resin, gums, waxes, and other exudates 243
Animal Residues Found on Artifacts 243
  Hair and feathers 243
  Blood 243
  Bone 245
  Shell 245
Usewear 245
  Scarring or edge fracturing 246
  Striations 246
  Polish 249
  Edge rounding 249
  Beveling 249
  Postdepositional damage 250
  Hafting traces 250
Residues on Grinding Stones and Potsherds 250
Case Study 8.1: Starch Grains Analysis of Residues on Grinding Stones 251
Case Study 8.2: Gas Chromatography–Mass Spectrometry (GC-MS) Analysis of Archaeological Residues (by Elyse Beck and Peter Grave) 252
Discussion and Conclusion 253
Acknowledgments 255
Further Reading 255
References 255

9 Animal Bones

Terry O’Connor and James Barrett

Introduction 264
Look Before You Dig 265
10 Human Remains
Charlotte Roberts

Introduction: Why Study Human Remains and How It Has Developed

Ethics and Human Remains

  Taphonomy, funerary context, and excavation and their effect on analysis and interpretation
  Care of human remains during and after excavation
  Detection
  Excavation
  Cleaning the remains once excavated
  Curation of human remains
  The starting point: basic analysis and interpretation
  Sex and age at death
  Paleodemography

Normal and Abnormal Variation

  Normal variation
  Abnormal variation

Methods

Studies of the Health of Populations

Specific Studies of Disease

  Macroscopic
  Biomolecular

Using Multiple Methods to Answer Questions on Past Health

Conclusion

Resources

References
11  **Plant Remains**  
*Wendy Beck and Emilie Dotte-Sarout*

Introduction: A Scene (by Wendy Beck)  
Macroscopic Plant Remains  
What Can Plant Remains Contribute to Archaeology?  
The relationship between people and plants  
Plants and technology  
Plants and regional subsistence  
Archaeological theories and plants  
What Are the Problems (and Solutions) for Identifying and Interpreting Macroscopic Plant Remains?  
Technical problems in analyzing macroplants and their solutions  
Archaeological sources  
Ethnobotanical and ethnoarchaeological sources  
What Kinds of Methods Can Be Effectively Used to Retrieve and Analyze Plant Remains?  
Basic plant classification  
Archaeological retrieval and identification of seeds, nuts, and fruits (carpology)  
Wood and charcoal (anthracology)  
More problems in the analysis of plant remains  
Case Study 11.1: Plant Remains from Kawambarai Cave, Near Coonabarabran, Eastern Australia (by Wendy Beck and Dee Murphy)  
Conclusion  
Further Reading  
References

12  **Shell Middens and Mollusks**  
*Sandra Bowdler*

Introduction  
Background  
The Creation of Middens  
The Identification of Middens  
Field Procedures  
Dating Middens  
Laboratory Procedures  
Hand Sorting into Components  
Shellfish Analysis

15 Writing the Past

Peter White

Introduction 436
First Decisions 436
What do I want to write about? 437
Who is my audience? 437
Structure 438
Aims 438
Background 438
Methods 439
Results 439
Conclusions 439
An abstract summarizes the text 439
References 440
Acknowledgments 440
Writing 440
Language 442
Writing for Publication 444
Audience 444
Start afresh 444
Follow instructions 444
Think about illustrations and tables 444
Reference efficiently 446
Read your proofs carefully 447
