Index

A
adsorption, 115–128

C
capillary
  pressure, 8, 14, 22, 28, 193, 194
  fracturing, 13-15
caprock flexure, 77
carbonation, 183–191
cement
  cement paste, 163-180, 182, 191, 194, 197, 202, 204, 215
  petroleum, 163, 169, 172, 179
  cementitious material, 182
chemo-mechanical coupling, 137, 148
crystallization, 226

D, F
dissolution, 135–159
failure, 43, 55, 61, 84, 169, 177
  capillary, 4, 12
  criterion, 84
  mechanism, 3, 5
  mechanical, 4, 6
  shearing, 172
fault, 43, 55, 61, 84, 169, 177
  reactivation, 60, 95
field experiment, 23–25, 34
fracturing,
  capillary, 13-15
  electrical shock, 44, 51, 55
  hydraulic, 44
  micro-, 14, 32, 33, 38
  rock, 59-61
  tensile, 4
  thermal, 4, 6

G, H
gas
  flow, 8, 13, 21-23, 26, 32, 38
  injection, 21-26, 29-32, 35-39
  steady flow rates
homogenization, 135–158
hydro-mechanical coupling, 146, 148, 152
Geomechanics in CO₂ Storage Facilities

I
injection
  pressure, 60, 66, 68, 84, 85, 223
  well, 210, 214, 222, 227
injectivity, 115, 116, 127, 128, 129
integrity, 3–14, 209–226
interfacial tension, 4

J, L
joint shear strength, 96, 107, 108, 112, 136
leaching, 43, 97, 112, 163–169, 173, 174, 187, 197, 198, 202, 218, 224
leakage, 85–90

M, N, P
mercury intrusion, 8, 43, 53
non-local damage, 59
permeability
  Darcy’s law, 27, 45, 46, 49, 51, 55, 85, 193, 194, 218
  Poiseuille’s law, 45, 46, 49, 55
poromechanics, 128, 209–212
pore size distribution (PSD), 43-48, 52-55
precipitation, 96, 135, 182, 187, 190, 197, 210-218, 227

R
reactive transport, 182, 204, 209, 210, 215, 222
rock
  seal, 3-5, 9, 12-15
  reservoir, 214
roughness, 95–112

S
saturation, 8, 11, 28, 30–36, 193, 194, 196, 212, 213
security
  geologic storage, 85
simulations
  molecular, 116, 122-129
  Monte Carlo, 122, 127, 129
swelling, 34, 116–118, 122, 125–127

T
thermo-hydro-chemo-mechanical coupling, 64, 137, 146, 148, 152
transport equation, 194, 204

U, W
upscaling, 43–55
Weibull model, 59, 61
