Symbols and Numbers

# (pound sign), SQL Server temporary tables, 88
## (pound signs), SQL Server temporary tables, 88
* (asterisk), selecting columns using, 264–265
4-byte representation, 48

A

access
controlling, 435
to XML documents, 573
ACID test, for transactions, 238–239
ACME sample database
installing, 32
overview of, 32–33
used in this book, 9–10
Adabas model, 14
ADD_MONTHS function, 363–364
aggregate functions
AVG, 374–375
COUNT, 373–374
creating views with, 127–128
defined, 368–376
MIN and MAX, 375–376
NULL, 374
overview, 368–371
SUM, 372–373
aggregation, 37–38
algorithms, for encryption of data, 402
alias data type, Microsoft SQL Server, 77
aliases
altering or destroying, 173–174
in FROM clause of SELECT query, 273
column, 269
creating, 133
DROP ALIAS statement, 174
literals, functions and expressions, 269–271
ALL operator, 412
ALTER DATABASE statement, 147
ALTER INDEX statement, 168–170
ALTER MATERIALIZED VIEW statement, 180
ALTER SEQUENCE statement, 176–177
ALTER SESSION statement, 230
ALTER statement, 181–183
ALTER TABLE statement, 156–166
allowing or disallowing table locking, 253
Microsoft SQL Server, 156–166
Oracle 11g, 156–161
SQL:2003, 156
ALTER TABLESPACE statement, 178–180
ALTER VIEW statement, 171
American National Standards Institute See ANSI (American National Standards Institute)
American Standard Code for Information Interchange (ASCII), 48
analytic functions, 299–301
AND compound operator, 276–277
AND keywords, 413–414
AND operator, 421

history of SQL standards, 23
open-source RDBMS, 8
SQL standards, 8, 26, 28
ANY|SOME operator, 412
application roles, in RDBMS security, 471–472
approximate numeric data types, 60–61
arithmetic operators, 407–411
ARRAY type, SQL:2003 supporting, 72
ascending sequences, creating, 140
ASCII (American Standard Code for Information Interchange), 48
assets, classification and control of, 491
assignment, in procedural languages. See variable assignment, in procedural languages
assignment operator, 425
asterisk (*), selecting columns using, 264–265
asymmetric keys, 438–439, 484
auditing databases
IBM DB2 events categories, 487
Microsoft SQL Server 2008 event categories, 488
Oracle 11g AUDIT levels for, 486
overview of, 4, 485
in RDBMS security, 436, 485–489
Sarbanes-Oxley Act (SOX) and, 492–493
authentication
in Microsoft SQL Server 2008, 469–470
in RDBMS security, 435–436
authorities, in IBM DB2 9.5, 451–452
authorization, in RDBMS security, 435
AVG function, 37, 287, 374–375

839
B

candidate key, 17
capacity, database, 4
cartesian product, 317–318
cartesian products (cross joins), 317–318
cascade constraints clause, drop table statement, 166–167
cascade option
drop table statement, 166
referential integrity constraints, 95, 97–99
case function, sql functions, 397–401
catalogs. see system catalogs
cc (common criteria) program, 491
cdata, xml and, 575
ceil function, 340–341
certificates, in rdbms security, 438–439
char string data type
ms sql server, 53
modifying existing columns, 158–159
oracle 11g, 51
string functions, 353–354
character large object string data type, sql-2003, 51
character sets
altering or destroying, 178
converting between, 389–390
creating, 144
overview of, 46–47
in sql-2003, 144
character string data type
ibm db2 9.5, 52
sql-2003, 51
character strings
fixed-length, 47
literals, 53–54
national, 48–49
overview of, 46–47
sql-2003, 50–53
varying-length, 47–48
character varying string data type
sql-2003, 51
charindex function, 348–350
check option clause, view constraint, 122
check table constraint, 93–94
circular references, creating schemas for objects with, 134
class c2 (controlled access protection) security rating, 489–490
clients, sql, 28
close cursor operation, 542
clustered indexes
arranging records using, 16
in ms sql server, 105
overview of, 119–120
cdascence function, 401–402
codasyl (conference on data systems languages), 14, 23
codd, dr. edward frank, 22
code reusability, 530
collations
altering or destroying, 178
creating, 144
defined, 46
as part of column definition, 92
collections
oracle 11g supporting, 74–75
sql-2003 supporting, 72–73
column names
fully qualified, 311
of information schema views, 509–510
<columnname> clause, insert statement, 192
columns
adding to existing table, 157–158, 162, 164
Index

aliases, 269
aliasing sequence, 92
column constraints, 90–91
column definitions, 89–90
CREATE VIEW statement, 121
default values, 91–92
indexes on, 114–116
inserting values for all, 195–196
inserting values for specified, 193–195
modifying existing, 158–159, 162, 164–165
modifying existing options, 163
ordering data by, 36
overview of, 16, 83–84
removing table, 159, 165
SELECT statement for multiple, 263–265
SELECT statement for single, 262–263
updating, 210–213
comments, adding, 99
COMMIT statement
distributed transactions and, 247–248
overview of, 241–244
SAVEPOINT syntax, 245–247
terminating transactions with, 239–240
Common Criteria (CC) program, 491
comparison operators, 275–276, 425–429
complex data types
constructed, 70–77
date and time, 63–66
overview of, 62
correlated queries, 331–332
COUNT function, 373–374
CREATE ALIAS statement, IBM DB2 9.5, 133
CREATE CHARACTER SET command, 144
CREATE COLLATION command, 144
CREATE DATABASE LINK statement, 149–150
CREATE DIRECTORY syntax, 150
CREATE DOMAIN clause, 144
CREATE FUNCTION syntax, user-defined functions, 554–555
CREATE MATERIALIZED VIEW syntax, 148–149
CREATE PROCEDURE syntax, stored procedures, 547–548
CREATE SCHEMA statement, 134–138
CREATE SEQUENCE statement, 139–143
CREATE SESSION privilege, 230
CREATE statement
allowing or disallowing locking for tables, 253
cross-reference, 151–153
database example of, 32–33
CREATE SYNONYM statement, 131–133, 173
CREATE TABLE statement, 32, 84
cross joins (Cartesian products), 317–318
cross joins (Cartesian products), 317–318
CURRVAL
assessing sequences in IBM DB2, 142–143
assessing sequences in Oracle, 141–142
conversion functions
between character sets, 389–390
between data types, 377
data type-specific, 391–392
defined, 376–392
IBM DB2 9.5 date/time string formats, 389
Microsoft SQL Server 2008, 380–383
Oracle 11g, 377–380, 390–391
Oracle date/time format templates, 384–387
Oracle number format templates, 387–388
overview, 376–377
CONVERT function
Microsoft SQL Server 2008, 380–383
Oracle 11g, 377–380, 390–391
copying, existing tables, 108–112
correlation, 228–230
create statements, SQL, 228–230
cross references, 151–153
data types, 376–383
database example of, 32–33
cross joins (Cartesian products), 317–318
cross joins (Cartesian products), 317–318
CREATE ALIAS statement, IBM DB2 9.5, 133
CREATE CHARACTER SET command, 144
CREATE COLLATION command, 144
CREATE DATABASE LINK statement, 149–150
CREATE DIRECTORY syntax, 150
CREATE DOMAIN clause, 144
CREATE FUNCTION syntax, user-defined functions, 554–555
CREATE MATERIALIZED VIEW syntax, 148–149
CREATE PROCEDURE syntax, stored procedures, 547–548
CREATE SCHEMA statement, 134–138
CREATE SEQUENCE statement, 139–143
CREATE SESSION privilege, 230
CREATE statement
allowing or disallowing locking for tables, 253
cross-reference, 151–153
database example of, 32–33
CREATE SYNONYM statement, 131–133, 173
CREATE TABLE statement, 32, 84
creating
CREATE TABLESPACE statement, 145–147
CREATE TRIGGER syntax, 559–564
CREATE VIEW statement, 121–126

   inserting selected, from other tables, 198
   values, passing parameters by, 533–537
   VARBINARY string data type, Microsoft SQL Server 2008, 55
   VARBINARY(MAX) string data type, Microsoft SQL Server 2008, 55
   VARCHAR (MAX) string data type, Microsoft SQL Server, 55
   VARCHAR string data type
   IBM DB2 9.5, 52
   Microsoft SQL Server, 53
   VARCHAR2 string data type
   IBM DB2 9.5, 268
   modifying existing columns, 158–159
   Oracle 11g, 51–52
   VARGRAPHIC string data type, IBM DB2 9.5, 52
   variable assignment, in procedural languages, 530–532
   IBM DB2 9.5, 531
   Transact-SQL, 531–532
   VARRAY data type, Oracle 11g, 75
   varying arrays, Oracle 11g supporting, 75
   varying-length character strings, 47–48
   varying-length national character strings, 49
   vendor-specific implementations
      access control statements, 38
      OLAP, 39
   video sharing and editing database, 10
   views
      altering or destroying, 171–173
      constraints, 122
      CREATE VIEW statement, 121–122
      creating complex, 127–129
      creating materialized, 147–149
      defined, 35
      executing SELECT query against, 272–274
implementing security using, 39
overview of, 120–121
in RDBMS security, 472–475

WHEN SOURCE NOT MATCHED clause, Microsoft SQL Server 2008, 222–223
WHERE clause, 274–285
collection operators with, 275–276
compound operators with, 276–277
dangers of, 209–210
error messages and, 209
IS NULL operator with, 280–281
NOT operator with, 279–280
BETWEEN operator with, 277–278
IN operator with, 278–279
overview of, 34, 274–275
subqueries in, 281–285
subqueries in DELETE statement and, 218
wildcard characters, with LIKE operator, 417
Windows, Microsoft available collations, 92
Microsoft SQL Server 2008 for Windows versions, 42–43
Recycle Bin, 167
WITH CHECK clause, 124
WITH ENCRYPTION clause, 126
WITH READ ONLY clause, 123–124
WITH SCHEMABINDING clause, 126
WITH VIEW_METADATA clause, 126
Word files, stored as binary strings, 54

XML (eXtensible Markup Language), 567–597
applications, accessing documents in, 573
CDATA, 575
as data source, 573
data type implementations, 69–70
data types methods, 593
DML and, 592–596
DTD and Schema, 569–571
encoding, 574–575
entities, 574
formatted, 569
IBM DB2 9.5 pureXML, 586–590
indexing tables and columns, 583, 590
introduction, 567
Microsoft SQL Server 2008, 590–596
namespaces, 571–573
Oracle 11g XML DB, 579–585
presenting documents, 575–577
publishing functions, 578–579
RDBMS and, 577–579
in SQL:2003, 25
in SQL:2008, 25
structure of, 567–573
summary, 596–597
vendor support for, 39
widespread adoption of, 19–20
XSD and, 569–571
XSL and XSLT, 575–577
XML Schema Definition (XSD), 570–571
XMLPARSE function, 69–70
XMLSERIALIZE function, 69–70
XMLtype methods, 582–583
X/Open XA specification, 247
XPath, 573
XQuery, 70, 573
XSD (XML Schema Definition), 570–571
XSL FO (eXtensible Styling Language Formatting Objects), 575–577
XSLT (eXtensible Styling Language Transformation), 575–577
