## Contents

Preface vii

1 The functions of oral mucosa 3  
1.1 Oral mucosa: What is it and what does it do? 3  
1.2 Functions of the oral mucosa 5  
References 7

2 The organization of oral mucosa 9  
2.1 Clinical features 10  
2.2 Component tissues and glands 14  
References 16

3 Oral epithelium 19  
3.1 Histological structure of oral epithelium 20  
3.2 Epithelial proliferation and turnover 24  
3.3 Molecular and cellular organization of oral epithelium 29  
3.4 Non-keratinocytes in the oral epithelium 41  
References 50

4 The interface between epithelium and connective tissue 53  
4.1 Organization of the normal interface 55  
4.2 Immune-mediated subepithelial blistering diseases (IMSEBDS) 57  
References 58
5  Connective tissue  59
5.1 Lamina propria  59
5.2 Blood supply  68
5.3 Nerve supply  70
References  74

6  Regional differences in the oral mucosa  77
6.1 Structural variations in different regions  77
6.2 Junctions in the oral mucosa  85
References  97

7  Development and aging of the oral mucosa  99
7.1 Developmental stages of oral mucosa  100
7.2 The control of mucosal development:
   epithelial–mesenchymal interaction  104
7.3 Aging  106
References  109

8  Barrier functions of oral mucosa  113
8.1 The permeability barrier  114
8.2 Immunologic barrier function of oral mucosa  122
References  135

9  Homologies in structure and function among mucosae: oral, esophageal, and vaginal mucosa  145
9.1 Esophagus  145
9.2 Vagina  147
9.3 Organization of the tissues of esophagus and vagina  147
9.4 Non-keratinocytes in esophageal and vaginal mucosa  153
9.5 Inflammatory cells  154
References  154
