A
AAP. See American Academy of Pediatrics
ACE inhibitors, 371–372
ACE-inhibitory peptides, 26, 324
Acesulfame-K, in yogurt, 338
Acetaldehyde, yogurt manufacture and, 340
Acetoin, 336
Acid casein, 30, 164
   in baked goods, 172
   manufacturing process for, 164
Acid-coagulated cheeses, classification of, 290
Acid coagulation, cheese production and, 242–243
Acid-converted starches, 457
Acidification
   cream cheese quality and, 349
   with culture
   cheeses obtained by, 290–294
   cottage cheese, 290–293
   cream and Neufchatel cheese, 293
   cream cheese with other foods, 293
   quarg/quark cheese, 293
Acidity, cheese ripening and, 251
Acid milk gels, 152
Acid phosphatase, in milk, 42
Acid precipitation, casein and, 164–165
Acid-producing bacteria, milk fermentation and, 335

Acid whey powder, typical composition of, 188t
ADPI. See American Dairy Products Institute; American Dry Products Institute
Adsorption, ion exchange chromatography and, 185
Adult nutrition, 521–525
   bars and gels: alternate forms of nutritional products, 525
   categories of, 521–522
   concluding remarks on, 531
   growing product set in, 528
   product forms, 523–524
   sports/performance nutrition, 524–525
Aerated confectionery products, 512–513
Aerated dessert/mousse
   manufacture of, 465–466
   suggested formulation for, 465t
Aerated yogurt, manufacturing procedure for, 449
Aerobacter, udder exterior and, 60
Aeromonas hydrophila, 61t
Agarwal, S., 227
Agave syrup, 457
Age thickening, in sweetened condensed milk, 132
Agglomeration
   adult nutrition products and, 523
   drying and, 122
Aghoghovbia, S. T., 76t
Aging
   of cream, 201
   of frozen desserts, 436, 438
Agitation of milk, 44
AHA. See American Heart Association
Algin, in puddings, 458
Alkaline phosphatase
in milk, 42
functionality of, 51
Allergen declaration, 375
Alpha-casein hydrolysates, 324–325
Alpha-isoketocaproate, 323
Alpha-lactalbumin, 191, 327
bioactivity of, 327t, 401t
in milk, 39
nutritive and health attributes of, 403
Alpha-lactophorin, 327, 371
Alphas1 casein, 161, 162, 162t
Alphas2-casein, 38, 161, 162, 162t
Altekruse, S. F., 75, 76t
Aluminum foil laminates, for cheese, 260
American Academy of Pediatrics, 516
American cheese(s)
manufacture outlines and applications
for, 268–272
nutrient content of 100 g of, used as
ingredients, 396–397t
ripening of, 249
supermarket sales of, 267
typical chemical composition of, 269t
varieties of, 32
per capita consumption, U.S.
(2005–2008), 32t
American Dairy Products Institute, 133, 424
American diet, role of milk constituents in, 388
American Dry Products Institute, 151
American Heart Association, CVD
risk reduction guidelines from, 406–407
AMF. See Anhydrous milk fat
Amino acids, 389
distribution in 2% milk and selected
cheeses as compared to
recommended daily allowance for
adults, 399t
preschool requirements for (FAO/WHO), 194, 194t
Ammonium caseinate, 166
Aneja, R. P., 227
Angel food cakes, whey protein
concentrates in, 476
Angiotensin converting enzyme (ACE)
inhibitors, 526
Angiotensin-converting enzymes, 326
angiotensin-I-converting enzyme, 371, 415
angiotensin-II-converting enzyme, 371, 415
Anhydrous butter oil, 210
Anhydrous milk fat, 15, 18, 132, 210
in baked goods, 476–478
beta-cyclodextine added to, 222
in chocolate confectionery, 507–508
fractionation of, 213–214
manufacture of, 210–213
neutralization of free fatty acids in, 213
nutritive and health attributes of,
407–408
plasticizing of products from, 214
polishing, 213
production of
from cream (method 1) and butter
(method 2), 211
phase inversion of cream for, 211, 212
refining, 213
typical composition of, 16t
vacuum drying of, 212
Animal-derived enzymes, 317
Animal lipases, derivation of, 323
Anion exchange column, in ion exchange
process, 186
Anitmycotic agents, manufacture of natural
cheeses and, 268
Annatto (Bixin) pigment, oxidation and,
263
Annatto coloring, 17
Annex 1 and 2 infant formulas, Codex
Alimentarius standards for, 516t
Antibiotics
milk screened for, cheese plants and, 230
raw milk and, 9, 105
Antibodies
in bovine colostrum, 499
of certain biologics, 499t
Antihypertensive peptides, functionality of,
53
Antimicrobial peptides, functionality of, 53
Antioxidant peptides, functionality of, 53
Antioxidants, 357
Antitumor peptides, functionality of, 53
API-ZYM system, 322
Apolactotransferrin, 404
Appearance
  of milk, 6, 47
  of raw milk, 9
Appert, Nicholas, 124
Arachidonic acid, 408, 409, 520
Arginine, 403, 522
Arocha, M. M., 81
Aroma, of milk, 6, 48
Aroma producers, for cultured buttermilk, 350
Artificial sour cream, 454
Artisanal microorganisms, in milk fermentation, 335
Ascorbic acid (vitamin C), 413
Aseptic liquid whitener, typical formula for, 440
Aseptic pudding with puree, 464
Asiago cheese
  in bakery products, 479
  FDA compositional standards for, 232
Aspartame, in yogurt, 338
Aspergillus glaucus, microbial spoilage and, 132
Aspergillus preparations, microbial proteinase preparations derived from, 322
Aspergillus repens, microbial spoilage and, 132
Aspergillus spp., 61t
Atherosclerosis, functional foods and prevention of, 387, 497
Athletes Honey Milk, 138
Aureli, P., 76t
Austin, C., 75t

B
B. animalis DN173–010, documented benefits of, 417t
B. bifidum, documented benefits of, 417t
B. infantis 35624, documented benefits of, 417t
B. lactis BB-12, documented benefits of, 417t
B. lactis HN019, documented benefits of, 417t
B. longum BB536, documented benefits of, 417t
Babel, F. J., 360
Bachmann, H. P., 78
Bacillus cereus, 8, 61t
  pasteurized milk safety and, 66–67
Bacillus preparations, microbial proteinase preparations derived from, 322
Bacillus-related foodborne illness, dried milk powders, infant formula and, 91
Bacillus stearothermophilus, 130
Bacillus subtilis, beta-Ig and bacteriostatic action against, 327
Back plate, in centrifugal pump, 107
Bacteria counts, raw milk storage and, 105
Bacterial cheese spoilage, 84–85
Bacterial limits, concentrated milk and, 133
Bacteriocins, in microbial metabolites, 370
Bacteriophages
  cheese plants and infection by, 238
  yogurt starters and, 446
Bactofugation, 111
Baked goods
  acid casein in, 172
  fats in, function of, 217–218
  milk powders in, 154
  multiple functionalities of, 138t
Bakers’ cheese, 348
  approximate chemical composition of, 291t
Bakery fats, solid fat indices of, 478t
Bakery products
  dairy ingredients in, 473–479
    butter and anhydrous milk fat, 476–478
    dried whole milk powder, 475
    handling of butter in bakeries, 478–479
  lactose, 476
  liquid milk, 475
  nonfat dry milk, 475
  whey and whey products, 475–476
Baking industry, concentrated milks used in, 139
Balance tank, 115
for double effect evaporator with thermo-mechanical vapor recompression, 120
HTST pasteurization and, 114–115
Bandaging, for cheese ripening, 260–261
Band or strip method, sliced process cheese and, 302
Banks, J. M., 227
Base consumption, soluble-nitrogen content and, 319
Batch churns, 17
butter, 203
continuous butter making machines vs., 202–203
Batch cookers, process cheese manufacture and, 301
Batch freezers flavoring for frozen desserts and, 438
freezing frozen desserts and, 438
ice cream and, 428
Batch membrane processes, 119
Batch pasteurization, mixing operations and, 109
Batch process procedure
for nougat making, 513
for rice-based desserts, 467
Batch tanks, flavoring for frozen desserts and, 438
Bauman, H., 377
BCAA. See Branched chain amino acids
Beckett, S. T., 501
Beef tallow, percentage of contribution of fat, in U.S. food supply from 2001 to 2005, 405t
Bell, M. L., 124
Bel Paese cheese characteristics of and uses for, 313t
microbial composition of starters for, 238t
Beneficial cultures, 416
Benzaldehyde, 324
Benzoyl peroxide
blue cheese and, 286
Swiss/Emmantaler cheese and, 285
Beta-casein, 161, 162, 162t
in milk, 38
peptides derived from, 324
Beta-cyclodextine, addition of, to liquid anhydrous milk fat, 222
Beta-galactosidase, 411
Beta-1g
bacteriostatic action of, 327
in cheese whey, 326
Beta-lactoglobulin
bioactivity of, 327t, 401t
in commercial infant formulas, 518
in milk, 39
nutritive and health attributes of, 403
in whey protein, 181, 182
Beta-lactorphins, 371
Beta-lactosin B, 326
Beta-methyl lanthionine, 371
Beverage mixes, 421–422
instant hot, 422t
Beverages, multiple functionalities of, 138t
Bifidobacterium bifidum, 50, 87, 411
Bifidobacterium sp., 335
probiotic species and, 362
in probiotic yogurts, 338
Bille, J., 75t
Bioactive peptides, 371–372, 497
generation of, 402
in milk, functionality of, 52–54
physiological attributes of, derived from digestion of caseins and whey proteins, 402t
Biochemical oxygen demand, of whey, 179
Bio-flavorings, 366–367
Bio-ingredients, functional, 358–363
Biological properties, whey-based ingredients and, 194
Biopreservatives, live protective cultures, 363–365
Bio-thickeners, 365–366
Biotin, 41t, 413
BiPRO processes, 186
Biscuits dairy ingredients in, 480–481
milk fat ingredients in, 217–218, 220t
Bitterness flavor block, 367
Bleaching agents, in some cheeses, 235
Blended (stirred style) yogurt, manufacturing outline for, 451
Blending, of dry mixes, 426–427
Blistering, mozzarella cheese and, 280
Blood lipid profile, food lipids and, 406–407
Blood pressure
casein peptides and regulation of, 402
dairy foods and lowering of, 415
normal, 406
Blue cheeses/blue-veined cheeses
approximate chemical composition of, 286
in bakery products, 479
characteristics of and uses for, 286, 313
type-modified cheese and, 331
FDA compositional standards for, 232
type manufacturing process for, 287
initial microbial composition of starters for, 238
nutrient content of 100 g of, used as ingredients, 395
ripening periods of, general guidelines for, 311
salting in brine, 246
in salty snacks, 488
Bockelmann, W., 227
BOD. See Biochemical oxygen demand
Boiling point, of milk, 48
Bolognas, milk protein and processing of, 496
Bone health, dairy products and, 414–415
Booster pump, pasteurizer plant, 115
Borden, Gail, 124
Bottazzi, V., 227
Botulism in infants, infant formula milk powder and, 91
Boughtflower, M. P., 79, 81
Bovine colostrum, antibodies in, 499
Bovine immunoglobulins, 498
Bovine milk
caseins in, properties of, 162
human milk proteins vs., 518
physical properties of, 45
typical protein composition of, 37
type fatty acid composition of, 408
Bovine milk fat globule membrane, role of, in human health, 410
Bovine milk lipids, constituents of, 407
type serum albumin, 39, 42, 181, 404
bioactivity of, 327, 401
Boylston, T. D., 363
Bramley, A. J., 59
Branched chain amino acids, 325
Branched fatty acids in milk, functionality of, 52
Branen, A. L., 364
Bread
dairy ingredients in, 480–481
dough composition for some types of, 482
Bread formulations, enzyme-modified butterfat and, 328
Breakfast drinks
processing of, 440–442
ready-to-drink, 442
Breast milk fat, approximating, ingredients used for, 520
Breast milk (human), 515
general composition of, 517
major protein components of, 518
Breddo Likwifier, 110–111
Breed, milk safety, composition, quality factors and, 43
Bregott dairy spread, 208
Brevibacterium linens, 237, 248
Brick cheese
approximate chemical composition of, 288
characteristics of and uses for, 288, 313
FDA compositional standards for, 232
manufacturing process for, 288–289
initial microbial composition of starters for, 238
ripening periods of, general guidelines for, 311
Brie cheese, 283
approximate chemical composition of, 283
microbial composition of starters for, 238
salting in brine, 246
white mold and, 237
Brine salting, 246, 247–248
Brine tanks, construction of, 247
Brining, for mozzarella cheese, 279
Brisabois, A., 75
Bromelain, 317
Brownian motion, of milk particles, 45
Browning, of mozzarella cheese, 280
Brucella abortus, 61
in cheeses, 83
raw milk and, 62
udder interior and, 60
Brucella melitensis, 61
raw milk and, 62
BSA. See Bovine serum albumin
BSE, 67, 68
Buffalo milk
cheese varieties and milk from, 231
chemical composition of, 36
composition of, used for consumption in various world regions, 388
paneer cheese made from, 297
white cheese production and, 283
Bula, C. J., 75
Bulk butter, 54
Bulk cooling tank, cow’s milk measured in line and sent to, 104
Bulk density, of milk powders, 148–149
Bulk milk handling and storage, 9–11
Buns, dough composition for some types of, 482
Butter, 15, 17–18, 69–71
anhydrous milk fat production from, 211
in baked goods, 476–478
bakeries and handling of, 478–479
in bread and biscuits, 481
churning temperature and, 17
concentrated forms of, 210–215
flakiness in baked goods and, 477–478
flavor of, 477
flow sheet diagram for, 16
formation of, 202–203
in frozen desserts, 432
manufacture and properties of, 199
manufacture of, J42
microbiological aspects of, 69–71
mouth feel of, 477
nutrient content of 100g of, used as ingredients, 394
packing, 205
pasteurization and, 69–70
in pastry and laminated dough, 482
percentage of contribution of fat, in U.S. food supply from 2001 to 2005, 405
processing of, 17
safety of, 70
scoring of, for sensory evaluation, 221
shelf life of baked goods and, 478
spoilage of, 70–71
storage of, 221
typical composition of, 16
working of, 17
Butter cookies, 483–484
Butter defects, examples of, 221
Butterfat, enzyme-modified, 328–329
Butter making, principles of, 199–200
Butter making technology, 200–210
butter formation, 202–203
churning section, 203–204
continuous butter making machine, 204
cream, 200–202
dairy spreads, 208
low-fat butter, 205–206
production of, 206
packing, 205
separating section, 204
solid fat content vs. temperature curves for winter butter, summer butter, and a blend of winter butter and vegetable oil, 207
spreadable butter, 206–208
spreads technology, 208–210
working section, 204–205
Buttermilk, 17, 71–72
conventional, 71
cultured, 23, 71–72, 349–351
dry, 21
microbiological aspects of, 71–72
milk fermentation and, 112
overcoming phage-related failures in
manufacture of, 358
quality issues and their remedies in
manufacture of, 445
Buttermilk powder
in dry mixes, 425–426
manufacture of, 142
specifications for, 143, 144
Butter oil, 15, 18
flow sheet diagram for, 16
pure, lipolyzed, 328–329
typical composition of, 16
Butter or shortened category, of cakes, 482
Butter products, nutrient content of 100g of,
used as ingredients, 394
Butterscotch hard candy, lipolyzed butter oil in, 329, 329
Butterscotch pudding, long-life, aseptically packaged, formulation for, 461
Butter sheets, 54
Butter shortening, 54
Butter-vegetable oil blends, 18
Butyric acid, in milk, functionality of, 52
Butyrophilin, 403, 410
B vitamins, in milk, 41–49
Calcium bioavailability of, 411
blood pressure regulation and, 415
bone health and, 414
colon cancer risk reduction and, 415
in milk, 40
in American diet, 388
functionality of, 49
nutritive and health attributes of, 411–412
weight loss and, 414
Calcium caseinates
in baked goods, 475
in frozen desserts, 434
surface active properties in, 174
Calcium chloride, in cheese milk, 235
Calcium-fortified milk powders, 156
Calf rennet
in cheese curd, 241–242
cheese ripening and, 249
Caliant, V., 75
Calpis, 326
Calpis Sour Milk, 53
Camel milk
chemical composition of, 36
composition of, used for consumption in various world regions, 388
Camembert cheese
approximate chemical composition of, 283
FDA compositional standards for, 232
manufacturing process for, 283–284
microbial composition of starters for, 238
salting in brine, 246
white mold and, 237
Campylobacteriosis, raw milk consumption by children and, 63
Campylobacter jejuni, 61
in cheeses, 82–83
raw milk and, 62–63
Cancer
dairy foods and lowering risk of, 415
functional foods and prevention of, 387, 497
medical nutritional products for, 528
Candida albicans, bovine colostrum with antibodies against, 499
Candida pseudotropicalis, cream spoilage and, 69
Candies, 501
Canning, evaporated milk and, 129
Capolac, 326t
Carageenans
in pudding manufacture, 458
in whipped cream, 439
Caramel, in sugar confectionery, 511–512
Caramel candy manufacture, lipolyzed
cultured cream in, 329, 329t
Carbohydrases, 317
Carbohydrates
in milk, 40
specialized, for diabetic market, 522
Carbon dioxide, addition of, raw milk
storage and, 65–66
Carboxy-methyl cellulose, in puddings, 458
Cardiovascular disease, 531
American Heart Association risk
reduction guidelines, 406–407
food lipids and, 406
long-chain saturated fatty acids and
control of, 409

Shortening, percentage of contribution of fat, in U.S. food supply from 2001 to 2005, 405
Short fatty acids, 36
Short pastry, milk fat ingredients in, 220
SHR. See Spontaneously hypertensive rats
Shreddability, mozzarella cheese and, 280
Shrikhand, quark used in preparation of, 347
Shrink films, packaging films for cheese and, 260
Shut-off valve, in-line standardization of milk and cream and, 114
Sialic acid, in glycomacropeptide, 325
Silos
batch mixing in, 110
raw milk storage in, 105, 106
Silverson in-line mixer, 111
Sing, E. J., 364
Single-stage homogenization, 116
Sinkability, of milk powders, 150
Skim milk
addition of, to cheese, 233–234
concentration and, 119
condensed, 18–19
in cottage cheese, 343
electrical conductivity of, 45
in frozen desserts, 432–433
manufacture of, 168
mean composition of protein, fat, ash, and lactose in, at various concentration factors, 135
separation of raw milk into, 11
typical composition of, 14
Skim milk cheese, 306
Skim milk concentrates, membrane technology and composition of, 135
Skim milk outlet with regulator, in paring disc separator, 112
Skim milk powder
in caramels, 512
in chocolate confectionery, 505–507
functional requirements of, in selected applications, 155
heat classification of, 144
manufacture of, 142
specifications for, 144
Skim milk solids, proximate composition of, 5
Sliced process cheese, 302
Slice-on-slice process cheese, 302
Slit formation, open cheese texture of biological origin and, 274
Slurrying cheese powders, 491
Smoking, cheese preservation by, 248
Smoothies, 422
SMP. See Skim milk powder
Snacks
dairy ingredients in, 485–486, 488–491
quality control for, 491
SnF. See Solids-not-fat
Soaked curd, typical chemical composition for, 269
Sodium
in milk, 40
nutritive and health attributes of, 412
Sodium alginate, in puddings, 458
Sodium aluminum phosphate, in process cheese, 307
Sodium bisulfate, in crackers, 481
Sodium caseinate gel, 173
Sodium caseinates, 166
in baked goods, 475
in frozen desserts, 434
in meat systems, 495
proposed plant for manufacture of, 167
solubility of, 171–172
surface active properties in, 174
Sodium chloride, in salty snacks, 488
Sodium hexametaphosphate, in process cheese, 307
Soft butter oil, 54
Soft cheese, packaging for, 259–260
Soft frozen yogurt, 342
Soft-ripened cheeses, 282
  approximate chemical composition of, 283
Soft-serve frozen yogurt, dairy ingredient composition of, 430
Soft-serve ice cream, 429
Soft-serve machines, 428
Solid fat content of milk fat, measuring, 222
Solid fat indices, of bakery fats, 478
Solids-not-fat, 125
Solubility
  functional properties and, 320
  of milk powders, 150–151
  of whey protein concentrates, 192–193
Solubility/hydration
  of casein, 171
  of caseinate, 171–172
  of micellar casein, 171
  of milk protein concentrates, 172
Soluble-nitrogen content, base consumption and, 319
Somatic cell count, 8, 133
Somatic cell counts, raw milk storage and, 105
SOPs. See Standard operating procedures
Sorbates, cottage cheese shelf life and, 291
Soups and sauces, multiple functionalities of, 138
Sour cream, 23, 351–354, 452–455
  artificial or filled, 454
  characteristics of, 352
  composition of, 452
  defined, 351
  dips, 454
  formulation of, 352–353
  half and half, 454
  long-life, 454
  manufacture of, 352, 353
  manufacturing process for, 452, 453, 454
  nutrient content of 100g of, used as ingredients, 394
  overcoming phage-related failures in manufacture of, 358
  physicochemical changes during, 353
  quality issues and their remedies in manufacture of, 445
  quality of, 353–354
  in salad dressing, 455
  shelf life of, 354
  typical formulation of, 442
  uses of, 354
Sour cream dip, manufacture of, 453
Sour cream-onion, for potato base snacks, 489
Southwood Working Party (UK), 67
Souza, M. J., 227
Soy, percentage of contribution of fat, in U.S. food supply from 2001 to 2005, 405
Soy protein, comparative nutritional measures of, 400
Soy protein infant formulas, 519
Spahr, U., 78, 84
SPC. See Standard plate count
Specialized milk powders, 155–157
Species, milk safety, composition, quality factors and, 43
Specific gravity, of milk, 48–49
Specific heat, of milk, 47
Specific lipases, 323
Sphingolipids, 410
  in milk, functionality of, 52
Spiral-wound UF membrane unit, 184
Sponge-and-dough process, nonfat dry milk and, 481
Spontaneously hypertensive rats, beta-lactosin B administered to, 326
Sports nutrition, 524–525
Spray-dried cream, typical composition of, 20
Spray-dried milk
  heat treatment for, 424
  solubility and scorched index requirements for, 425
Spray-dried skim milk powder, in chocolate confectionery, 506
Spray dryers, 146–148, 147, 169
Spray drying, 121–122
  for chocolate manufacture, 506
dry sweet whey and, 28
nonfat dry milk and, 21
Spray drying unit, 122
Spreadable butter, 206–208
“Spreadable fats,” EC sales descriptions of, 200
Spreads technology, 208–210
SSHE. See Scraped-surface heat exchanger
St. Ivel Gold Extra Light plus Omega 3, 209
St. Paulin cheese, microbial composition of
  starters for, 238
Stabilizers
  live functional cultures and, 358
  in yogurt, 338, 447
Stainless steel pump block, in homogenizer, 117
Stainless steel shroud and sound insulation, in centrifugal pump, 107
Standardization
  of dairy streams, 142–143
  milk composition and, 44
  milk processing and, 11
  sweetened condensed milk and, 130–131
Standard Methods for the Examination of Dairy Products, 133
Standard operating procedures, logical,
  prerequisite programs and, 379
Standard plate count, 8, 133
Standards of identity, 376
  resources for in U.S., 376
Staphylococcal poisoning
  cheese, dairy products and, 81–82
  dried milk powders and, 90
*S. aureus*
  beta-Ig and bacteriostatic action against, 327
  bovine colostrum with antibodies against, 499
  dried milk powders and, 90
  dry salting curd and, 247
  in milk and dairy products, 81–82
  raw milk and, 64
  udder interior and, 60
*Staphylococcus epidermidis*, bovine
  colostrum with antibodies against, 499
Starter cultures
  for cottage cheese, 344
  for cultured buttermilk, 350
  functions of, 236
  microbial composition of, in manufacture
    of major cheese varieties, 238
  for milk fermentation, 335, 336
  for sour cream, 352–353, 354
  for yogurt, 338
Starter distillates, purified bio-flavorings
  and, 368
Starters
  cheese technology and, 235–238
  genetically engineered, 240
  manufacture of natural cheeses and, 268
  mixed defined, 239
  multi-strain, 239–240
  pure, defined single-strain, 239
  thermophilic, 240
Stearic acid, 36
Sterilization, evaporated milk and,
  129–130
Sterilized and aseptically packaged
  starch-based pudding, 460, 461
Steroids, in milk, 41
Stevia products, 457
Stilton cheese
  approximate chemical composition of, 286
  microbial composition of starters for, 238
Stirred style yogurt, 449
Storage
  of butter, 221, 478–479
  of chocolate crumb, 503
  of dry mixes, 427
  milk processing and, 12
  oxidation and, 263
  of raw milk, 105–106
Storage stability, of milk powders, 153
Storage tanks, bulk milk and, 11
Strained yogurt, 343
Strawberry mousse, manufacture of, 466
*S. agalactiae*, udder interior
  and, 60
Index

**Streptococcus faecalis**, bovine colostrum with antibodies against, 499

**Streptococcus pyogenes**, 61
- bovine colostrum with antibodies against, 499

**Streptococcus Thermophilus**, 240, 335, 337, 338, 340, 341, 359, 416, 443, 447

**Streptococcus viridians**, bovine colostrum with antibodies against, 499

**Streptococcus zooepidermicus**, 61

**Stretchability**
- of mozzarella cheese, 280
- pizza cheese and, 311

**Stretching machines**, for mozzarella cheese, 279

**String cheese**, 311

**Stroke**, 387, 405, 406, 497

**Structured lipids**, 210

**Substrates**, 317

**Succinic acid**, intense dairy flavors and, 368

**Sucralose**, in yogurt, 338

**Sucrose**, in caramel, 511

**Sucrose crystals**
- crumb chocolate and, 504, 505
- in milk powder chocolate, 507, 507

**Suction line**, in centrifugal pump, 107

**Sugar**, percentage of contribution of fat, in U.S. food supply from 2001 to 2005, 405

**Sugar confectionery**
- dairy ingredients in, 510–513
- aerated confectionery, 512–513
- caramel and toffee, 511–512

**Sugar cookies**, suggested formulations for, 484

**Summer butter**, solid fat content vs. temperature curves for, 207

**Sung, N.**, 84

**Superoxidase dismutase**, 42

**Surface-ripened cheeses**, 227, 249

**Surface tension**, of milk, 46

**Surfactants**, emulsification facilitated by, 320

**Sutherland, B. J.**, 245

**Sweet acidophilus milk**, 362

**Sweet cream butter**, 202
- in baked goods, 477
- bio-flavorings and, 366

**Sweetened condensed milk**, 19–20, 87, 124
- Codex standards for, 126
  - defects in
    - chemical defects, 132
    - microbial spoilage, 132
  - international standards for, 125
  - in lime pie filling, 485
  - manufacture of, 19–20, 88–89, 130–131
  - lactose seeding, 131
  - standardization, 130–131
  - multiple functionalities of, 138
  - nutrient of 100 g of, 393
  - proximate composition of, 126
  - recombined, 132–133

**Sweetened condensed skim milk**, concentration and, 119

**Sweeteners**, 357
- natural high-intensity, 457
- percentage of contribution of fat, in U.S. food supply from 2001 to 2005, 405
- in yogurt, 338, 446–447

**Sweet fresh cream**, in frozen desserts, 431

**Sweet whey**, in caramels, 512

**Sweet whey powder**, typical composition of, 188

**Swirls**, adding to frozen desserts, 438

**Swiss cheese**
- approximate chemical composition of, 284
- in bakery products, 479
- characteristics of and uses for, 313
- cutting, 243
- differential permeability films for packaging of, 260
- enzyme-modified cheese and, 331
- extensive gas evolution of, 260, 261
- hooping and pressing curd and, 245
- manufacturing process for, 285–286
- microbial composition of starters for, 238
- nutrient content of 100 g of, used as ingredients, 395
- ripening periods of, general guidelines for, 311
- salting in brine, 246
- substitutes/analogs, 308
Swiss cheese for manufacturing, 285
Swiss cheese sauce, formulation for, with/without Dariteen-410 Swiss cheese flavor, 332

Yeast, cream spoilage and, 69
Yellow cake, 482
nonfat dry milk in formulations for, 483
Yersinia, udder exterior and, 60
Yersinia enterocolitica, 61, 64, 82
YN, in chocolate products, 502
annual total and per capita sales of, in U.S., 445
application of, 341–342
blended, manufacturing outline for, 451
characteristics of, 337
commercial, types of, 446
congjugated linoleic acids in, 372
dairy ingredients in, 443–445
defined, 85–86, 337, 443
formulations of, 337–338
frozen, 342, 429
fruit preparations for flavoring of, 447–448
Greek, 342–343
health benefits of, 337, 415–418
high-quality, body characteristics for, 358
history behind, 336–337
lactase-deficient individuals and, 413
manufacture of, 338–340
set and stirred, flow chart for, 339
manufacturing procedures for

Yogurt (continued)
aerated yogurt, 449
blended (stirred style), 451
fruit-flavored yogurt, 449, 450
Greek yogurt, 450–451
heat-treated yogurt, 449–450
plain yogurt, 449, 450
yogurt-based salad dressings, 449
microbiological aspects of, 85–86
milk fermentation and, 112
mixing operations and, 109
physicochemical changes during manufacture of, 340
probiotic, 338, 362
processing of, 448–449
quality control for, 452
quality of, 341
safety of, 86
in salad dressing, 342
shelf life of, 341
spoilage of, 86
stabilizers in, 447
strained, 343
sweeteners in, 446–447
typical formulations of, 442
Yogurt bacteria, required and optional composition of, 447
Yogurt bars, 343
Yogurt beverages, manufacturing process for, 451–452
Yogurt cheese, 341, 342
Yogurt organisms, growth temperature profile of, 447
Yogurt stabilizers, common, 358
Yogurt starters
description of, 445
production of
fermentation, 448–449
heat treatment, 448
homogenization, 448
mix preparation, 448
