An overview of statistical causality xvii
Carlo Berzuini, Philip Dawid and Luisa Bernardinelli

1 Statistical causality: Some historical remarks 1
D.R. Cox
1.1 Introduction 1
1.2 Key issues 2
1.3 Rothamsted view 2
1.4 An earlier controversy and its implications 3
1.5 Three versions of causality 4
1.6 Conclusion 4
References 4

2 The language of potential outcomes 6
Arvid Sjölander
2.1 Introduction 6
2.2 Definition of causal effects through potential outcomes 7
2.2.1 Subject-specific causal effects 7
2.2.2 Population causal effects 8
2.2.3 Association versus causation 9
2.3 Identification of population causal effects 9
2.3.1 Randomized experiments 9
2.3.2 Observational studies 11
2.4 Discussion 11
References 13

3 Structural equations, graphs and interventions 15
Ilya Shpitser
3.1 Introduction 15
3.2 Structural equations, graphs, and interventions 16
3.2.1 Graph terminology 16
3.2.2 Markovian models 17
3.2.3 Latent projections and semi-Markovian models 19
3.2.4 Interventions in semi-Markovian models 19
vi CONTENTS

3.2.5 Counterfactual distributions in NPSEMs 20
3.2.6 Causal diagrams and counterfactual independence 22
3.2.7 Relation to potential outcomes 22
References 23

4 The decision-theoretic approach to causal inference 25
Philip Dawid

4.1 Introduction 25
4.2 Decision theory and causality 26
4.2.1 A simple decision problem 26
4.2.2 Causal inference 27
4.3 No confounding 28
4.4 Confounding 29
4.4.1 Unconfounding 29
4.4.2 Nonconfounding 30
4.4.3 Back-door formula 31
4.5 Propensity analysis 33
4.6 Instrumental variable 34
4.6.1 Linear model 36
4.6.2 Binary variables 36
4.7 Effect of treatment of the treated 37
4.8 Connections and contrasts 37
4.8.1 Potential responses 37
4.8.2 Causal graphs 39
4.9 Postscript 40
Acknowledgements 40
References 40

5 Causal inference as a prediction problem: Assumptions, identification and evidence synthesis 43
Sander Greenland

5.1 Introduction 43
5.2 A brief commentary on developments since 1970 44
5.2.1 Potential outcomes and missing data 45
5.2.2 The prognostic view 45
5.3 Ambiguities of observational extensions 46
5.4 Causal diagrams and structural equations 47
5.5 Compelling versus plausible assumptions, models and inferences 47
5.6 Nonidentification and the curse of dimensionality 50
5.7 Identification in practice 51
5.8 Identification and bounded rationality 53
5.9 Conclusion 54
Acknowledgments 55
References 55

9 Causal effects and natural laws: Towards a conceptualization of causal counterfactuals for nonmanipulable exposures, with application to the effects of race and sex  
Tyler J. VanderWeele and Miguel A. Hernán  
9.1 Introduction  
9.2 Laws of nature and contrary to fact statements  
9.3 Association and causation in the social and biomedical sciences  
9.4 Manipulation and counterfactuals  
9.5 Natural laws and causal effects  
9.6 Consequences of randomization  
9.7 On the causal effects of sex and race  
9.8 Discussion  
Acknowledgements

12 The mediation formula: A guide to the assessment of causal pathways in nonlinear models 151

Judea Pearl

12.1 Mediation: Direct and indirect effects 151
12.1.1 Direct versus total effects 151
12.1.2 Controlled direct effects 152
12.1.3 Natural direct effects 154
12.1.4 Indirect effects 156
12.1.5 Effect decomposition 157
12.2 The mediation formula: A simple solution to a thorny problem 157
12.2.1 Mediation in nonparametric models 157
12.2.2 Mediation effects in linear, logistic, and probit models 159
12.2.3 Special cases of mediation models 164
12.2.4 Numerical example 169
12.3 Relation to other methods 170
12.3.1 Methods based on differences and products 170
12.3.2 Relation to the principal-strata direct effect 171
12.4 Conclusions 173
Acknowledgments 174
References 175

13 The sufficient cause framework in statistics, philosophy and the biomedical and social sciences 180

Tyler J. VanderWeele

13.1 Introduction 180
13.2 The sufficient cause framework in philosophy 181
13.3 The sufficient cause framework in epidemiology and biomedicine 181
13.4 The sufficient cause framework in statistics 185
13.5 The sufficient cause framework in the social sciences 185
13.6 Other notions of sufficiency and necessity in causal inference 187
13.7 Conclusion 188
Acknowledgements 189
References 189

14 Analysis of interaction for identifying causal mechanisms 192

Carlo Berzuini, Philip Dawid, Hu Zhang and Miles Parkes

14.1 Introduction 192
14.2 What is a mechanism? 193
14.3 Statistical versus mechanistic interaction 193
14.4 Illustrative example 194
14.5 Mechanistic interaction defined 196
14.6 Epistasis 197
14.7 Excess risk and superadditivity 197
14.8 Conditions under which excess risk and superadditivity indicate the presence of mechanistic interaction 200
14.9 Collapsibility 201
15 Ion channels as a possible mechanism of neurodegeneration in multiple sclerosis

Luisa Bernardinelli, Carlo Berzuini, Luisa Foco, and Roberta Pastorino

15.1 Introduction
15.2 Background
15.3 The scientific hypothesis
15.4 Data
15.5 A simple preliminary analysis
15.6 Testing for qualitative interaction
15.7 Discussion

Acknowledgments

16 Supplementary variables for causal estimation

Roland R. Ramsahai

16.1 Introduction
16.2 Multiple expressions for causal effect
16.3 Asymptotic variance of causal estimators
16.4 Comparison of causal estimators
16.4.1 Supplement C with L or not
16.4.2 Supplement L with C or not
16.4.3 Replace C with L or not
16.5 Discussion

Acknowledgements
Appendices

17 Time-varying confounding: Some practical considerations in a likelihood framework

Rhian Daniel, Bianca De Stavola and Simon Cousens

17.1 Introduction
17.2 General setting
17.2.1 Notation
17.2.2 Observed data structure
17.2.3 Intervention strategies 236
17.2.4 Potential outcomes 237
17.2.5 Time-to-event outcomes 237
17.2.6 Causal estimands 238

17.3 Identifying assumptions 238

17.4 G-computation formula 239
17.4.1 The formula 239
17.4.2 Plug-in regression estimation 240

17.5 Implementation by Monte Carlo simulation 242
17.5.1 Simulating an end-of-study outcome 242
17.5.2 Simulating a time-to-event outcome 242
17.5.3 Inference 242
17.5.4 Losses to follow-up 243
17.5.5 Software 243

17.6 Analyses of simulated data 243
17.6.1 The data 243
17.6.2 Regimes to be compared 244
17.6.3 Parametric modelling choices 245
17.6.4 Results 246

17.7 Further considerations 249
17.7.1 Parametric model misspecification 249
17.7.2 Competing events 249
17.7.3 Unbalanced measurement times 250

17.8 Summary 251
References 251

18 ‘Natural experiments’ as a means of testing causal inferences 253

18.1 Introduction 253
18.2 Noncausal interpretations of an association 253
18.3 Dealing with confounders 255
18.4 ‘Natural experiments’ 256
18.4.1 Genetically sensitive designs 257
18.4.2 Children of twins (CoT) design 259
18.4.3 Strategies to identify the key environmental risk feature 261
18.4.4 Designs for dealing with selection bias 263
18.4.5 Instrumental variables to rule out reverse causation 264
18.4.6 Regression discontinuity (RD) designs to deal with unmeasured confounders 265

18.5 Overall conclusion on ‘natural experiments’ 266
18.5.1 Supported causes 266
18.5.2 Disconfirmed causes 267
Acknowledgement 267
References 268
19 Nonreactive and purely reactive doses in observational studies
Paul R. Rosenbaum

19.1 Introduction: Background, example
19.1.1 Does a dose–response relationship provide information that distinguishes treatment effects from biases due to unmeasured covariates? 273
19.1.2 Is more chemotherapy for ovarian cancer more effective or more toxic? 274

19.2 Various concepts of dose
19.2.1 Some notation: Covariates, outcomes, and treatment assignment in matched pairs 277
19.2.2 Reactive and nonreactive doses of treatment 278
19.2.3 Three test statistics that use doses in different ways 279
19.2.4 Randomization inference in randomized experiments 280
19.2.5 Sensitivity analysis 281
19.2.6 Sensitivity analysis in the example 283

19.3 Design sensitivity 284
19.3.1 What is design sensitivity? 284
19.3.2 Comparison of design sensitivity with purely reactive doses 286

19.4 Summary 287
References 287

20 Evaluation of potential mediators in randomised trials of complex interventions (psychotherapies)
Richard Emsley and Graham Dunn

20.1 Introduction 290
20.2 Potential mediators in psychological treatment trials 291
20.3 Methods for mediation in psychological treatment trials 293
20.4 Causal mediation analysis using instrumental variables estimation 297
20.5 Causal mediation analysis using principal stratification 301
20.6 Our motivating example: The SoCRATES trial 302
20.6.1 What are the joint effects of sessions attended and therapeutic alliance on the PANSS score at 18 months? 303
20.6.2 What is the direct effect of random allocation on the PANSS score at 18 months and how is this influenced by the therapeutic alliance? 304
20.6.3 Is the direct effect of the number of sessions attended on the PANSS score at 18 months influenced by therapeutic alliance? 305

20.7 Conclusions 305
Acknowledgements 306
References 307

21 Causal inference in clinical trials
Krista Fischer and Ian R. White

21.1 Introduction 310
21.2 Causal effect of treatment in randomized trials 312
21.2.1 Observed data and notation 312
CONTENTS

21.2.2 Defining the effects of interest via potential outcomes 312
21.2.3 Adherence-adjusted ITT analysis 314

21.3 Estimation for a linear structural mean model 316
21.3.1 A general estimation procedure 316
21.3.2 Identifiability and closed-form estimation of the parameters in a linear SMM 317
21.3.3 Analysis of the EPHT trial 319

21.4 Alternative approaches for causal inference in randomized trials comparing experimental treatment with a control 321
21.4.1 Principal stratification 321
21.4.2 SMM for the average treatment effect on the treated (ATT) 322

21.5 Discussion 324
References 325

22 Causal inference in time series analysis 327
Michael Eichler

22.1 Introduction 327

22.2 Causality for time series 328
22.2.1 Intervention causality 328
22.2.2 Structural causality 331
22.2.3 Granger causality 332
22.2.4 Sims causality 334

22.3 Graphical representations for time series 335
22.3.1 Conditional distributions and chain graphs 336
22.3.2 Path diagrams and Granger causality graphs 337
22.3.3 Markov properties for Granger causality graphs 338

22.4 Representation of systems with latent variables 339
22.4.1 Marginalization 341
22.4.2 Ancestral graphs 342

22.5 Identification of causal effects 343
22.6 Learning causal structures 346
22.7 A new parametric model 349
22.8 Concluding remarks 351
References 352

23 Dynamic molecular networks and mechanisms in the biosciences: A statistical framework 355
Clive G. Bowsher

23.1 Introduction 355
23.2 SKMs and biochemical reaction networks 356
23.3 Local independence properties of SKMs 358
23.3.1 Local independence and kinetic independence graphs 358
23.3.2 Local independence and causal influence 361

23.4 Modularisation of SKMs 362
23.4.1 Modularisations and dynamic independence 362
23.4.2 MIDIA Algorithm 363
